| 23-June-25 | Sergii B. | 3.230 | Added section – <b>Bonus Wallet feature</b>   |

# I. API Overview

Casino Game API supports different types of games: video slots, video poker, keno, etc. and API should not be changed if Casino Operator needs to add more games to their portfolio.

As soon as new game is available, it is added to Game Library with game symbols. Casino Operator will use provided symbol for StartGame method during opening specific game and Bet requests will be also sent using this symbol. Game Library will be provided to Casino Operator together with integration package or resent when new games are available.

Using this Casino Game API Casino Operator is able to integrate both types of games: web version for desktop devices and mobile version.

Platform provides the set of games built in HTML5 technology.

## 1.1 Seamless Wallet API

Operator should provide the Seamless Wallet Integration API on their side. Pragmatic Play will call the methods when players make a bet or get a win and their balance should be updated.

| Method/Section                   | Description  | Status   |
|----------------------------------|--|----------|
| 2.6 Autofinalization Feature     | This feature allows to resolve and complete incomplete rounds with age that exceed 30 days (or a shorter time, if desired) from the start of the round.  | Required |
| Authenticate                     | This method authenticates player by secure token.<br>Casino Operator generates one-time secure token and sends it with the URL for opening Pragmatic Play game. See “11.1 Flow diagram of opening casino game ”  | Required |
| Balance                          | Returns the balance of a player.   | Required |
| Bet                              | Checks if the player has enough funds and subtracts money from player’s balance. Returns the value of updated balance.   | Required |
| Refund                           | Refunds player’s balance. This method will be used for cancellation of a bet in the case the game cannot be finished.  | Required |
| Result                           | Adds winning amount to player’s balance. Returns the value of updated balance.   | Required |
| BonusWin                         | Notifies the Casino Operator that free spins are over and player’s balance should be increased with bonus amount.  | Required |
| JackpotWin                       | Using this method a Pragmatic Play system will notify Casino Operator about Jackpot winning.   | Required |
| PromoWin                         | Notifies the Casino Operator that tournament campaign is over and player’s <u>cash</u> balance should be increased with amount in promoWin.  | Required |
| EndRound                         | Notifies the Casino Operator that the game round is over, for transactions finalization purpose.   | Optional |
| SessionExpired                   | Notifies the Casino Operator that player’s game session has expired in PragmaticPlay system due to inactivity or game client closing.  | Optional |
| GetBalancePerGame                | Returns the balance of a player per game.  | Optional |
| Adjustment                       | Using this method the Pragmatic Play system will send to Casino Operator the amount player’s balance to be adjusted with.  | Optional |
| Live Casino Dynamic Games Access | DGA is a data transfer system that will provide our operators with game table data to populate thumbnails on their website.<br><br><i>*this functionality is required to be implemented (in Asia market the requirement needs to be discussed with AM)</i> | Required |

## 1.2 Balance Transfer API

Operator can use this API for game opening and transferring funds to player's balance in the Pragmatic Play system.

| Method/Section                   | Description  | Status   |
|----------------------------------|--|----------|
| 2.6 Autofinalization Feature     | This feature allows to resolve and complete incomplete rounds that do not exceed 30 days (or a shorter time, if desired) from the start of the round.  | Required |
| CreatePlayer                     | This method allows registering a new player on Pragmatic Play side.  | Required |
| Transfer                         | This method transfers funds in to player's balance (i.e. deposit) and out of the player's balance (i.e. withdrawal) within Pragmatic Play system   | Required |
| GetBalance                       | Using this method Casino Operator can get the current balance of the player in the Pragmatic Play system   | Required |
| StartGame                        | Casino Operator should call this method before opening the game in player's browser. Secure one-time token is generated on the Pragmatic Play side. As the result of this method Casino Operator will get an URL to the requested game.                    | Required |
| TerminateSession                 | Using this method Casino Operator can terminate the current player session and kick him out all games  | Required |
| Live Casino Dynamic Games Access | DGA is a data transfer system that will provide our operators with game table data to populate thumbnails on their website.<br><br><i>*this functionality is required to be implemented (in Asia market the requirement needs to be discussed with AM)</i> | Required |

## 1.3 Integration API

Integration API offers generic methods that allow Operators to create a game lobby, get statistics and close player sessions forcefully.

| Method         | Description  | Status   |
|----------------|--|----------|
| GetCasinoGames | Using this method Casino Operator can retrieve the list of games available for integration.<br><br>May be used for automatic building games lobby at casino website. | Optional |
| CloseSession   | This method terminates active game sessions of the player.   | Optional |

## 1.4 Data feeds

Reporting API on the Pragmatic Play side provides a set of data feeds for downloading play sessions, failed transactions and recent information about jackpots.

| Method              | Description   | Status   |
|---------------------|---|----------|
| Play Sessions       | This data feed returns play sessions that was played during specified period.   | Optional |
| Failed Transactions | Casino Operator can get the list of Refund and Result transactions that was not processed even after multiple attempts made by the Pragmatic Play server. | Optional |
| Active Jackpots     | Provides information about open jackpots per casino brand.  | Optional |

|                  |  |          |
|------------------|--|----------|
| Jackpot Winnings | Provides a list of last winnings of the specified jackpot. | Optional |
|------------------|--|----------|

## 1.5 Player ID

### 1.5.1 Seamless Wallet (Authenticate method)

Player ID (userId parameter) is unique identifier of the user within Casino Operator system. Before sending to Pragmatic Play any gaming related request Casino Operator should authenticate a player using Authenticate method. If player is new and its account does not exist in the Pragmatic Play system it will be created automatically on the base of the data sent by Casino Operator server in the Authenticate response. If player account already exists in the Pragmatic Play database it will be updated with the response data if necessary. Player id received in the Authenticate response will be sent with all subsequent requests to Casino Operator.

### 1.5.2 Balance Transfer (StartGame method)

Player ID is unique identifier of the user within Pragmatic Play system. Before sending to Pragmatic Play any gaming related request Casino Operator should register a player using CreatePlayer method, get player id and save it somewhere inside own system. Then this player id will be sent with all subsequent requests to both Casino Operator and Pragmatic Play.

Please note: this type of game opening remains in the API for compatibility with the previous versions of the interface. Option 2 is more standard and preferred way to open games for integrated systems.

## 1.6 Play session

Play session is a game round in which bet and wins are combined together. Each round can contain several bets, win and refunds of the bets.

Play sessions (Rounds) that trigger free spins or any bonus feature remain open until the player has completed all the actions required for such a feature. Until then, the game session is incomplete and can remain open for a long time or forever.

### Life cycle of Unfinished rounds

#### *Important!*

*To resolve and complete unfinished rounds, operators must integrate Autofinalization feature (section 2.6 Autofinalization of Unfinished Rounds) Autofinalization completes rounds older than 30 days by default.*

## 1.7 Transaction reference

Transaction reference is unique transaction id within Pragmatic Play system. Transaction reference used for bets and wins has to be different.

## II. Integration API

This is a simple API for Casino Operator to retrieve some data from Pragmatic Play system and send some events to Pragmatic Play. API is an HTTP listener, which listens POST requests coming to an URL with the request mappings below.

All responses are in JSON format.

URL of the HTTP service will be provided by Pragmatic Play for the production and test environments and looks like:

`https://{API service domain}/IntegrationService/v3/http/CasinoGameAPI`

Integration simple HTTP Service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

### 2.1 GetCasinoGames

*Request path: POST /getCasinoGames/*

Using this method Casino Operator will get the list of casino games available for the integration.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service  | Required |
| options     | List of settings (String). By including it, operator can get additional information about game.<br>Possible values are: <ul style="list-style-type: none"> <li>• GetFrbDetails</li> <li>• GetLines</li> <li>• GetDataTypes</li> <li>• GetFeatures</li> <li>• GetFcDetails</li> <li>• GetStudio</li> <li>• FilterStudio=&lt;studio_name&gt;, for example<br/>FilterStudio=PP - for Pragmatic Play games<br/>or<br/>FilterStudio=FP - for Fat Panda games</li> </ul> | Optional |
| hash        | Hash code of the request.  | Required |

*Response parameters*

| Name        | Type        | Description  |
|-------------|-------------|--|
| gameList    | CasinoGame  | The list of CasinoGame objects for transferring casino games details (see data type description below) |
| error       | String(10)  | 0 - if the request was successfully processed or error code in other case.                             |
| description | String(250) | Description of the error for troubleshooting purposes.   |

*Type: CasinoGame*

| Name                 | Type        | Description  |
|----------------------|-------------|--|
| gameID               | String(20)  | Symbolic unique identifier of the game provided by Pragmatic Play.<br><i>Example: vs7monkeys, vs50amt, rla, wra, bjb</i>   |
| gameName             | String(100) | Name of the game.<br><i>Example: "Lucky Dragons", "Hot Safari"</i>   |
| gameTypeID           | String(20)  | Symbolic unique identifier of the game.<br><i>Example: "vs", "rl", "vp".</i>   |
| typeDescription      | String(100) | Short description of the game type.<br><i>Example: "Video Slot", "Roulette", "Video Poker".</i>  |
| technology           | String(30)  | Short description of the technologies in which the game is available, comma separated.<br>Possible values are: <ul style="list-style-type: none"> <li>html5 - HTML5 games</li> </ul>   |
| technologyID         | String(10)  | Technologies in which the game is available, comma separated. Possible values are: <ul style="list-style-type: none"> <li>H5 - HTML5 games</li> </ul>  |
| platform             | String(30)  | Platform for which the game can be opened. Possible values, comma separated: <ul style="list-style-type: none"> <li>MOBILE – if game should be opened on mobile devices</li> <li>WEB – if game will be opened on desktop devices</li> </ul>  |
| demoGameAvailable    | Boolean     | If true, a demo version of the game is available.  |
| aspectRatio          | String(10)  | Describes the proportional relationship between the width and the height of the game.<br><i>Example: "4:3", "16:9"</i>   |
| gameIDNumeric        | Long        | The numeric value of gameID  |
| jurisdictions        | List        | List of supported jurisdictions  |
| frbAvailable         | Boolean     | If true, a free spins bonus of the game is available.<br><br><i>This field is optional and will appear in response in cases where request contains <a href="#">GetFrbDetails</a> in options list</i>   |
| fcAvailable          | Boolean     | If true, a free chips bonus of the game is available.<br><br><i>This field is optional and will appear in response in cases where request contains <a href="#">GetFcDetails</a> in options list</i>  |
| variableFrbAvailable | Boolean     | If true, a variable free spins bonus of the game is available<br><br><i>This field is optional and will appear in response in cases where request contains <a href="#">GetFrbDetails</a> in options list</i>   |
| lines                | Integer     | Bet multiplier: value that multiplies base bet to determine total bet.<br><i>This field is optional and will appear in response in cases where request contains <a href="#">GetLines</a> in options list</i>   |
| features             | List        | List of supported in-game features<br><i>This field is optional and will appear in response in cases where request contains <a href="#">GetFeatures</a> in options list</i><br><br>Possible values: <ol style="list-style-type: none"> <li>BUY - in-game Buy feature</li> <li>ANTE - ante bet supporting</li> <li>SUPER_SPIN - super spin support</li> <li>FREE_BONUS_FEATURE - instant bonus support</li> </ol> |
| dataType             | String(3)   | Type of game portfolio   |

## Available options:

RNG - Main portfolio games (video slots, classic slots etc.)

LC - Live Casino portfolio

VSB - Virtual sports betting portfolio

*This field is optional and will appear in response in cases where request contains GetDataTypes in options list*

studio

String(10)

Studio the game belongs to. Available options:

- PP - Pragmatic Play games
- FP - Fat Panda games

*This field is optional and will appear in response in cases where request contains GetStudio in options list***Example of HTTP request:**

POST /IntegrationService/v3/http/CasinoGameAPI/getCasinoGames/ HTTP/1.1

    "features": [],  
    "fcAvailable": false  
}  
}
```

### 2.1.1 Game icons

Links to game icons were updated. See new paths below. It is recommended to use new links further.

*Old URLs (with /rec and /square attributes, like game\_pic/rec/339/vs20olympgate.png) keep working. They still lead to the same game and size non-branded icons as before, according to specified parameters. For icons of new types and sizes, the new version of links should be used.*

Operator can use the URL below to get icons for the games:

`http(s)://{common-static.ppgames.net}/gs2c/common/lobby/v1/apps/slots-lobby-assets/{gameID}/{gameID}_{size}_{branding}_{language}.{filetype}`

**GameID** is a symbolic unique identifier of the game within the Pragmatic Play. Example: 'vs25ultwolgol'.

**Size** should be specified as `<width>x<height>`. Example: '200x200'.

**Branding** defines the branding of an icon (see comparison of branded and non-branded icons below). The following options exist:

- *B* – branded icon
- *NB* – non-branded icon

**Language** defines the language of an icon (see comparison of English and Chinese icons below). The following options exist:

- *No parameter* – default language (English)
- *ZH* – Chinese

**Filetype** defines the file extension. For the same size of an icon, several filetypes can exist, such as jpg, png.

The following icons can be received:

| Size      | Branded English | Non-branded English | Non-branded Chinese |
|-----------|-----------------|---------------------|---------------------|
| 138x138   | png, jpg        | <b>png, jpg</b>     |                     |
| 160x115   | png, jpg        | <b>png, jpg</b>     |                     |
| 168x112   | png, jpg        | png, jpg            |                     |
| 188x83    | png             | <b>png</b>          |                     |
| 200x200   | png             | <b>png</b>          |                     |
| 216x160   | jpg             | jpg                 | jpg                 |
| 260x350   | png             | png                 | png                 |
| 325x234   | png             | <b>png</b>          |                     |
| 339x180   | png             | png                 | png                 |
| 366x160   | jpg             | jpg                 | jpg                 |
| 667x414   | png             | png                 | png                 |
| 800x600   |                 | jpg, webp, avif     | jpg, webp, avif     |
| 1000x1000 |                 | jpg, webp, avif     | jpg, webp, avif     |
| 1200x800  |                 | jpg, webp, avif     | jpg, webp, avif     |

*\*Icons in **bold** (old sizes) exist for most games. Please note that other icon sizes and types may not be available for all games. If a game icon does not exist but is required, AM can request it additionally.*

*Example of HTTP request:*

For branded English:

```
GET gs2c/common/lobby/v1/apps/slots-lobby-assets/vs25ultwolgol/vs25ultwolgol_260x350_B.png
HTTP/1.1
```

For non-branded English:

```
GET gs2c/common/lobby/v1/apps/slots-lobby-assets/vs25ultwolgol/vs25ultwolgol_260x350_NB.png
HTTP/1.1
```

For non-branded Chinese:

```
GET gs2c/common/lobby/v1/apps/slots-lobby-assets/vs25ultwolgol/vs25ultwolgol_260x350_NB_ZH.png
HTTP/1.1
```

Host: {common-static.ppgames.net}

Cache-Control: no-cache

*Example of response for different icon types:*

Branded English

Non-branded English

Non-branded Chinese

## 2.2 GetLobbyGames

*Request path: POST /CasinoGameAPI/getLobbyGames*

Using this method Casino Operator will get the list of casino games configured in Back office for the slots lobby.

This method returns all games (configured in the "All Games" category) and the other categories available for slot lobbies are "Hot Games" and "New Games".

*Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service   | Required |
| categories  | List of games (String). Possible values are: <ul style="list-style-type: none"> <li>all – games from All Games category</li> <li>new – games from New Games category</li> <li>hot – games from Hot Games category</li> </ul> <i>*If multiple values are to be used, they are specified separated by commas.</i> | Required |
| country     | ISO Country code. Possibility to get games available (not blocked) for the specific country.  | Optional |
| hash        | Hash code of the request.   | Required |

*Response parameters*

| Name              | Type                   | Description  |
|-------------------|------------------------|--|
| error             | String                 | Request error code, 0 is success   |
| description       | String                 | Error description  |
| gameID            | String                 | Symbolic unique identifier of the game provided by Pragmatic Play. Example: vs7monkeys, vs50amt, rla, wra, bjb |
| gameIDNumeric     | Number                 | The numeric value of gameID  |
| gameName          | String                 | Name of the game. Example: "Lucky Dragons", "Hot Safari"   |
| gameTypeID        | String                 | Symbolic unique identifier of the game. Example: "vs", "rl", "vp".   |
| jurisdictions     | Array                  | Supported jurisdictions  |
| lines             | Number                 | Number of lines  |
| frbAvailable      | Boolean                | if true, a free spins bonus of the game is available.  |
| demoGameAvailable | Boolean                | If true, a demo version of the game is available.  |
| features          | class java.lang.Object | List of supported features.<br>Possible values:<br>- BUY - in-game Buy feature<br>- ANTE - ante bet support    |

|              |        |  |
|--------------|--------|--|
|              |        | - SUPER_SPIN - super spin support<br>- FREE_BONUS_FEATURE - instant bonus support                              |
| sortingOrder | Number | Sorting order  |
| games.new    | Array  | The list of games included in New Games category. It will be returned if 'new' category is sent in the request |
| games.hot    | Array  | The list of games included in Hot Games category. It will be returned if 'hot' category is sent in the request |

**Example of HTTP request:**

```
POST /IntegrationService/v3/http/CasinoGameAPI/getLobbyGames/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=ext_test1&categories=all,new,hot&country=ES&hash=99ff2beefd8b04926e821e6b3496c45c
```

**Example of JSON response:**

```
{
  "error": "0",
  "description": "OK",
  "games": {
    "all": [
      {
        "gameID": "vs20hotzone",
        "gameIdNumeric": 1669710633,
        "gameName": "African Elephant",
        "gameTypeID": "vs",
        "jurisdictions": [
          "BG",
          "EE", ..
          "X1"
        ],
        "lines": 20,
        "frbAvailable": true,
        "variableFrbAvailable": true,
        "features": [
          "FREE_BONUS_FEATURE",
          "BUY"
        ],
        "demoGameAvailable": true,
        "sortingOrder": 1
      },
      ...
      {
        "hot": [
          {
            "gameID": "vs20dhdice",

            "gameName": "The Dog House Dice Show",
            "gameTypeID": "vs",
            "jurisdictions": [
              "BE",
              "MT", ..
              "BY"
            ],
            "lines": 20,
            "frbAvailable": true,
            "variableFrbAvailable": true,
            "features": [],
            "demoGameAvailable": true,
            "sortingOrder": 1
          }
        ]
      }
    ]
  }
}
```

## 2.3 CloseSession

*Request path: POST /closeSession/*

This method terminates active game sessions of the player. Operator has the option to remove player's history, so that the incomplete game rounds cannot be finished by another player (usually this is relevant for terminals). To close only game session for specific game Operator may send game id parameter in the request.

### *Request parameters*

| Name             | Description   |
|------------------|---|
| secureLogin      | User name for authentication in the Casino Game API service   |
| externalPlayerId | Id of the player within the Operator system.  |
| gameId           | Id of the game. This is optional parameter, which has to be sent by Operator if only the session for specific game should be closed.  |
| clearHistory     | Specifies whether to clear the history of the round or not.<br>May have the following values:<br>1 – history should be removed, so that the last game round cannot be completed anymore<br>0 – last game round can be completed |
| hash             | Hash code of the request.   |

### *Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/closeSession/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=421&gameId=vs7monkeys&clearHistory=1&hash=5fd31717ba4-da9e78ac19730212925c2
```

### *Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 2.4 CancelRound

*Request path: POST /cancelRound/*

CancelRound method initiates a refund request, which the Pragmatic system will send to the Operator's remote wallet. After successful refund call the game round will be marked as Canceled in the Pragmatic system.

This method Operator can use any time they want to close player's round forcefully, due to a retention policy on the Operator's system or according to requirements for regulated markets.

For BT integration, a round can only be canceled if it is not older than 24 hours.

*Request parameters*

| Name             | Description   |
|------------------|---|
| secureLogin      | User name for authentication in the Casino Game API service |
| externalPlayerId | Id of the player within the Operator system.                |
| gameId           | Id of the game. This is required parameter.                 |
| roundId          | Id of the game round to be canceled (play session id).      |
| hash             | Hash code of the request.                                   |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/cancelRound/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=421&&gameId=vs7monkeys&roundId=123456&hash=5fd31717ba4-da9e78ac19730212925c2
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 2.5 HealthCheck

HealthCheck method can be used by operators to check if PragmaticPlay provider API service or Game server are live and ready.

### **API service HealthCheck**

*Request path:*

*GET https://{API-service-domain}/IntegrationService/v3/http/CasinoGameAPI/health/heartbeatCheck*

### **Game server HealthCheck**

*Request path:*

*http://{game-server-domain}/gs2c/livetest*

*Frequency of calling HealthCheck should not be more than 1 call per minute for any particular brand.*

### *Response statuses*

| HTTP Status | Description   |
|-------------|---|
| 200         | API service is available to use   |
| Not 200     | Any other HTTP status means some issues with API service. Not ready to use. |

### Example for API Service HealthCheck

*Example of HTTP request:*

```
GET /IntegrationService/v3/http/CasinoGameAPI/health/heartbeatCheck HTTP/1.1
Host: api.prerelease-env.biz
```

*Example of JSON response:*

```
HTTP Status: 200 OK

Response body:
{
  "error": "0",
  "description": "OK"
}
```

### Example for Game server HealthCheck

*Example of HTTP request:*

```
GET /gs2c/livetest HTTP/1.1
Host: ext-test1.prerelease-env.biz
```

*Example of response:*

```
HTTP Status: 200 OK
```

## 2.6 Auto-finalization of Unfinished Rounds

### *Important!*

*To automatically complete unfinished rounds on both the PragmaticPlay and operator side, the Autofinalization function is required for integration.*

**Unfinished rounds** – round with in-game free spins, or in-game bonus features, which was started by player but wasn't completed during game session.

Unfinished rounds can be caused by following player's actions during gameplay:

- Player hit or bought in-game free spins and closed the game without finishing them.
- Player hit in-game bonus game feature and closed game without finishing it.
- Player started round in **RNG** table game (like American Blackjack) and closed game without completing the round.

Pragmatic Play has the following rules regarding non-finished game rounds:

1. All non-finished players' rounds are stored in PP system.
2. If an operator has specific jurisdiction requirements or internal logic, the finalization procedure is activated for their brands. Meaning, all non-finished rounds are finalized after a specific period of time. The period of time is configured based on jurisdiction requirements or the operator's logic.

### For Seamless Wallet API

3. Rounds are finalized according to the following logic:

- a. If a player does not play the round at all before closing the game, PP sends a refund request to the operator and closes the round (irrelevant to slots).
- b. If a player plays the round (for example, makes several free spins) and won in any free-spin, PP sends an actual win to the operator and closes the round.
- c. If a player plays the round (for example, makes several free spins) and hasn't won in any free-spin), PP closes the round. (In case if EndRound is enabled for Operator – the Endround request for this round will be sent)  
In case the player makes a spin and wins additional free spins or other bonus features (including bonus buy), it counts as a spin and the money is not refunded.

### For Balance Transfer API

3. Rounds are finalized according to the following logic:

- a. If a player does not complete a round before the game closes, PP returns the bet amount to the player's balance and closes the round.
- b. If a player has played a round (e.g. made several freespins) and won in any freespin, PP credits a partial amount of the winnings to the player's balance and closes the round.
- c. If a player plays the round (for example, makes several free spins) and hasn't won in any free-spin), player's balance is not affected. PP closes the round.  
In case the player makes a spin and wins additional free spins or other bonus features, it counts as a spin and the money is not refunded.

## 2.7 Replay link

*Request path: `ReplayAPI/getSharedLink`*

Using this method Casino Operator will get a link to replay the player's round.

**Important:** *Replay Link for a round can be obtained only if the round is not older than 31 days.*

**Important:** *For 1 casino, no more than 1 request per second can be sent.  
If the server is unavailable or overloaded, send a retry.*

### Request parameters

| Name             | Type   | Description   | Status   |
|------------------|--------|---|----------|
| secureLogin      | String | API user name (secureLogin value) for authentication in Pragmatic Play API. | Required |
| hash             | String | Hash code of request.   | Required |
| roundId          | Number | Unique identifier of the game round.  | Required |
| externalPlayerId | String | Id of the player within the Operator system.                                | Required |

### Response parameters (JSON)

| Name        | Type   | Description                                   |
|-------------|--------|---|
| error       | String | Error code.                                   |
| description | String | Description of the error for troubleshooting. |
| url         | String | URL to replay the player's round.             |

### Example of HTTP request:

```
GET /IntegrationService/v3/http/ReplayAPI/getSharedLink/?
externalPlayerId=1234666303&secureLogin=username&roundId=5015066750001&hash=90a1575b0d6d972a-
cac432d4c9fcb0b96 HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

### Example of JSON response:

```
{ "error" : 0,
  "description" : "OK",
  "url" : "https://dev1-rs.aws.gametechlabs.net/RRMHIEMe0E"
}
```

## 2.8 Error codes

Below table contains the error HTTP statuses that should be returned, in case of issues on request processing

| HTTP status | Description  |
|-------------|--|
| 0           | OK   |
| 1           | Unauthorized - Incorrect secure login or calculated hash.          |
| 2           | Empty mandatory field.   |
| 3           | Invalid parameter value.   |
| 4           | Round not found. The requested roundId is not found in the system. |
| 5           | There is no replay for this round for some reason.                 |
| 17          | Player not found   |
| 99          | Request limit has been exceeded. Try later please..                |
| 100         | Internal error. Try later please                                   |

## III. Seamless Wallet API

### General description

This is a simple API for Pragmatic Play gaming platform to connect to player's wallet. API is an HTTP listener, which listens application/x-www-form-urlencoded POST requests.

In POST requests can be sent either HTTP Header:

- Content-Type: application/x-www-form-urlencoded
- Content-Type: application/x-www-form-urlencoded; charset=UTF-8

For application/x-www-form-urlencoded, the body of the HTTP message sent to the Seamless Wallet API is essentially one giant query string where name/value pairs are separated by the ampersand (&), and names are separated from values by the equals symbol (=). An example of this would be (please see request examples for each call below):

parameter1=value1&parameter2=value2

All responses should be in JSON format (please see response examples for each call below).

URL of the Seamless Wallet API should be provided by Casino Operator for the production and test environments.

### Bonus Wallet feature

PragmaticPlay supports the 'Bonus Wallet' Feature, which allows Operators to split bet amount to “Real” and “Bonus” parts, which will be displayed in PragmaticPlay’s Backoffice summaries, respectively. This can be managed using the 'bonus' and 'usedPromo' parameters.

- bonus: Represents the player's available bonus balance in wallet API methods responses.
- usedPromo: Indicates the amount of bonus funds used for a specific bet, in “Bet” API method response

*For example, if a player has the following balance:*

*Cash: 100*

*Bonus: 100*

*When placing a 10-unit bet, the operator may respond with one of the following outcomes:*

*cash: 90, bonus: 100, usedPromo: 0 -> The bet was fully covered by real funds.*

*cash: 100, bonus: 90, usedPromo: 10 -> The bet was fully covered by bonus funds.*

*cash: 95, bonus: 95, usedPromo: 5 -> The bet was split, using 5 real and 5 bonus funds.*

Both bonus and usedPromo parameters are required in the wallet API responses. However, if the operator does not use the player's bonus wallet, zero values should be returned for both parameters.

Winnings for rounds in which parts of the bonus wallet were used for bets will be divided in the PragmaticPlay back office into real/bonus parts in the same proportions as were used for bets in this round

## 3.1 Game opening

Operator can form a valid launch URL using 3.1.2 GameURL API method

Operator can allow or decline player to participate in promo campaigns (incl. FSB, Tournament and Prize Drop campaigns). Two way are possible:

1. By sending **extralInfo** / **promoAvailable** parameter in authenticate response (It has higher priority)
2. By sending **promo** parameter in launch URL (It has lower priority)

It is strongly recommended to use **extralInfo** / **promoAvailable** parameter in authenticate response!

Logic of **promo** parameter application for promo campaigns (incl. FSB, Tournament and Prize Drop campaigns)

- Public promo campaigns: parameter value is applied for all players;
- Private promo campaigns with **include** list: Player which is in include list will be able to participate regardless of parameter value. Rest of players are unable to participate;
- Private promo campaigns with **exclude** list: Player which is in exclude list will not be able to participate regardless of parameter value. Rest of players participate depending on parameter value

### 3.1.1 Explicit launch URL (deprecated)

### 3.1.2 GameURL API method

Value of **externalPlayerId** parameter, passed in *GameURL API* request, must be identical to value of **userId** parameter, which Operator returns in response to *Authenticate API* request. Otherwise game launch will be failed for the Player

Operators should use this method to obtain the URL for launching **RNG, LC** and **VS** products.

The specification for launching bingo products is described in section **17.1 Bingo room Launching**.

*Request path: POST /game/url*

Using this method Operator can receive a valid launch URL to requested game.

*Request parameters*

| Name             | Description  | Status   |
|------------------|--|----------|
| secureLogin      | User name for authentication in the Casino Game API service  | Required |
| symbol           | Id of the game within the Pragmatic Play system.   | Required |
| language         | Language on which the game should be opened.   | Required |
| token            | Secure one-time token is generated by OPERATOR for specific player. (Not required if playMode=DEMO)  | Required |
| externalPlayerId | Unique identifier of the player within the Casino Operator system.<br>Parameter value is case-sensitive.<br><i>Example: joe1001, 2644987, playerABC*, playerAbc*</i><br>* playerABC and playerAbc – are two different player accounts within Pragmatic Play system     | Required |
| currency         | Player's ISO 4217 currency code. Examples: 'EUR' or 'USD'.   | Optional |
| platform         | Platform for which the game should be opened   | Optional |
| technology       | H5 (for all games and devices)   | Optional |
| stylename        | Unique identifier of the OPERATOR at PROVIDER side (not for all integration protocols)   | Optional |
| cashierUrl       | URL for opening the cashier on Casino Operator site when a player has no funds   | Optional |
| lobbyUrl         | URL for returning to Lobby page on Casino Operator site. This link is used for Back to Lobby (Home) button in mobile version of games  | Optional |
| country          | Country of the player. 2-letter Country code, ISO 3166-1 alpha-2.<br><i>Examples: GB, GI, DK, ES, IT, PT</i>   | Optional |
| rci              | The reality check interval, in minutes.  | Optional |
| rce              | The reality check elapsed time, in minutes.  | Optional |
| rcHistoryUrl     | a link to the player's game history.<br><i>For an iframe, the following example should be used:</i><br>rcHistoryUrl=javascript:window.parent.location.href='{http://somewebsite.com/}'   | Optional |
| rcCloseUrl       | a link to the page on the Operator's website, to which the player will be redirected if they choose to close the game.<br><i>For an iframe, the following example should be used:</i><br>rcCloseUrl=javascript:window.parent.location.href='{http://somewebsite.com/}' | Optional |

|                        |   |   |
|------------------------|---|---|
| promo                  | Indicates if player is allowed to participate promo campaign (incl. FSB, Tournament and Prize Drop campaigns). Possible values: “y”; “n” (Logic of this parameter application is described in note below)   | Optional  |
| ctlgroup               | Identification for specific table limits group (is applicable for Live Casino portfolio only)   | Optional  |
| playMode               | If parameter not exist or value is REAL – return real game launch URL, if value is DEMO – return demo game launch URL.  | Optional  |
| jurisdiction           | Jurisdiction of the player.<br><i>*Within this method is used only for playMode=DEMO.</i>   | Optional  |
| minimode               | 1 or 0 Enable or disable mini mode open game  | Optional  |
| operatorGameHistoryUrl | URL to open game history page on Operator’s side  | Optional  |
| lobbyFilter            | <p><b>When requesting a URL for LC game:</b><br/>Filter values which will be predefined when user will open Live Casino lobby category. Possible values available in section <b>18.4 Predefined filters in Live Casino Lobby categories</b></p> <p><b>When requesting a URL for Standalone Slots lobby:</b><br/>Category that will be opened in the Standalone Slots Lobby by default when it is launched.<br/>Possible options:</p> <ul style="list-style-type: none"> <li>• <b>forYou</b> – For You category will be opened when launching the lobby;</li> <li>• <b>allSlots</b> – All Slots category will be opened when launching the lobby;</li> <li>• <b>DDW</b> – Drops and Wins category will be opened when launching the lobby.</li> </ul> <p>If no option or incorrect value is sent in the ‘lobbyFilter’ parameter, the ‘For you’ category will be opened by default.</p> | Optional<br>(only for LC portfolio <b>AND</b> Standalone Slots Lobby) |
| hash                   | Hash code of the request.   | Required  |

*Response parameters*

| Name    | Description  |
|---------|--|
| gameURL | Link to the game to be open on the Pragmatic Play side. This link will contain special parameters which should remain as is. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/game/url/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache
secureLogin=ext_test1&symbol=vs50aladdin&language=en&currency=EUR&platform=WEB&technology=H5&token=

}
```

Below table contains the error codes that the Pragmatic Play system will return in the response to GameURL API calls.

| Code | Description   | Further action recommendations                              |
|------|---|---|
| 1    | Internal error. Try later please.   | Error reason should be checked in relevant support channel. |
| 2    | Incorrect secure LOGIN and secure password combination<br>(will be returned also if the hash code validation is failed) | Verify request values                                       |
| 7    | One or several input parameters is not set or set incorrectly.  | Verify request values                                       |
| 14   | Required field is empty: {0} is required  | Check missing and required parameters                       |

## 3.2 Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them in key1=value1&key2=value2.
3. Append secret key, e.g.: key1=value1&key2=value2SECRET.
4. Calculate the hash by using MD5.
5. Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.

### 3.3 Data types

| Parameter     | Type            | Description  |
|---------------|-----------------|--|
| userId        | String(100)     | Unique identifier of the user within Casino Operator system.<br>Parameter value is case-sensitive.<br><i>Example: joe1001, 2644987, playerABC*, playerAbc*</i><br>* playerABC and playerAbc – are two different player accounts within Pragmatic Play system   |
| currency      | String(3)       | Player's ISO 4217 currency code. <i>Example: EUR, USD</i>  |
| country       | String(2)       | Country of the player. 2-letter Country code, ISO 3166-1 alpha-2.<br><i>Examples: GB, GI, DK, ES, IT, PT</i>   |
| jurisdiction  | String(2)       | Jurisdiction of the player. Available values are: <ul style="list-style-type: none"> <li>AT – Austria</li> <li>AL – Alberta</li> <li>BR – Brazil</li> <li>BS – Bahamas</li> <li>BG – Bulgaria</li> <li>BE – Belgium</li> <li>CH – Switzerland</li> <li>CZ – Czech Republic</li> <li>DK – Denmark</li> <li>UK – United Kingdom</li> <li>IT – Italy</li> <li>IE – Ireland</li> <li>ES – Spain</li> <li>PT – Portugal</li> <li>RO – Romania</li> <li>MT – Malta</li> <li>MX – Mexico</li> <li>PE – Peru</li> <li>PH – Philippines</li> <li>LT – Lithuania</li> <li>LV – Latvia</li> <li>EE – Estonia</li> <li>SE – Sweden</li> <li>SK – Slovakia</li> <li>CO – Colombia</li> <li>GG – Guernsey (Alderney)</li> <li>GE – Georgia</li> <li>BY – Belarus</li> <li>RS – Serbia</li> <li>IM – Isle of Man</li> <li>GR – Greece</li> <li>DE – Germany</li> <li>NL – The Netherlands</li> <li>NO – Norway</li> <li>X1 – Buenos Aires City</li> <li>X2 – Buenos Aires Province</li> <li>ZA – South Africa</li> <li>UA – Ukraine</li> <li>99 – Unregulated market</li> <li>ON – Ontario</li> <li>HR – Croatia</li> <li>HU – Hungary</li> </ul> |
| cash          | Decimal (10, 2) | <i>Player's real balance.</i><br><i>Example: 100.00</i>  |
| bonus         | Decimal (10, 2) | Player's promo balance.<br><i>Example: 100.00</i>  |
| amount        | Decimal (10, 2) | Amount of the bet or win.<br><i>Example: 1.00</i>  |
| dataType      | String(3)       | Type of portfolio<br>Available options:<br>RNG - Main portfolio games (video slots, classic slots etc.)<br>LC - Live Casino portfolio<br>VSB - Virtual sports betting portfolio  |
| totalBalance  | Decimal (10, 2) | Full player's balance on casino side, used for menu of balance choosing during switch of games<br><i>Example: 1.00</i>   |
| chosenBalance | Decimal (10, 2) | Amount of money player wants to spend in the game (for in-game lobby switch for Italian regulated market)  |
| launchingType | String(1)       | Type of game launch (for in-game lobby switch for Italian regulated market)<br>Possible values:  |

|                     |                     |  |
|---------------------|---------------------|--|
|                     |                     | <ul style="list-style-type: none"> <li>• “N” – normal launch</li> <li>• “L” – from in-game lobby”</li> </ul>   |
| previousToken       | String(100)         | Value if the token that was received from operator for the game that should be closed (for in-game lobby switch for Italian regulated market)  |
| extraInfo           | String (Valid JSON) |  |
| win                 | Decimal (10, 2)     | Amount of win, which can be optionally sent in endRound calls.<br>Example: 1.00, 0.0   |
| roundId             | Long                | Identification for the player's round.   |
| jackpotId           | Long                | Identification for the jackpot.  |
| jackpotContribution | Decimal (10, 6)     | Amount of the contribution to the jackpot  |
| jackpotDetails      | String (Valid JSON) | Detailed contribution amounts for multi-tier jackpots<br>Examples:<br>For slots:<br>"jackpotDetails":{"64":{"contribution":0.28,"contributionBaby":0.1},"62":{"contribution":0.28,"contributionBaby":0.2}}"<br>For bingo: {"Jackpots":{"2312":{"Contribution":5.0},"2313":{"Contribution":5.0},"2314":{"Contribution":5.0}}}   |
| gameId              | String (20)         | <i>*jackpotDetails.contribution – 10, 16 (limited only by decimal datatype)</i><br>Identifier of the game.<br>Example: vs25queenofgold, vs50aladdin, csStriple8gold, bjma, rla, vpa<br>The list of available games may be obtained by Casino Operator by calling GetCasinoGames method of CasinoGameAPI of Integration simple HTTP Service.  |
| language            | String(2)           | Language code in ISO 639-1 standard (e.g. en, fr, it).   |
| reference           | String (32)         | Unique reference of the transaction.   |
| sessionId           | String (100)        | Game session ID on Pragmatic Play side   |
| token               | String (100)        | Authentication token of the player generated by the Casino Operator system. Token is passed to Pragmatic Play as a game launch request parameter or as a authenticate response parameter afterwards.   |
| providerId          | String (32)         | Game provider identifier.<br>May be provided by Casino Operator. Otherwise default is used.  |
| transactionId       | Varchar (32)        | Unique ID of the transaction within Casino Operator system.  |
| timestamp           | Long                | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)   |
| roundDetails        | String(4000)        | Additional information about the current game round, such as “gamble”, “spin”, “bonus” - comma separated. The value could be changed depending on the gameplay of the round.<br>Examples: <ul style="list-style-type: none"> <li>• “spin” – default bet</li> <li>• “spin,bonusBuy” – bet with purchased bonus</li> <li>• “spin,anteBet” – on Ante bet</li> <li>• “spin,superSpin” – on Super Spins</li> <li>• “type:main,desc:Tie” – Live casino Example 1</li> <li>• "type:bets,desc:[{"c":"Even","a":"3.0"},{"c":"OG","a":"3.0"}, {"c":"Red","a":"3.0"}]" – Live casino Example 2</li> <li>• “type:bets,desc:[{"c":"5","a":"100"}, {"c":"8","a":"100"}],countOfFreeChips:20” – Live casino Example 3<br/>The countOfFreeChips parameter indicates the number of free chips used for placing bets. This parameter is sent exclusively for rounds played with free chips.</li> </ul> |
| bonusCode           | String              | Bonus unique identifier within the Operator system. <b>Max length of this parameter depends on requestId. The sum of their length has to be 252</b>  |

|                   |                 |  |
|-------------------|-----------------|--|
|                   |                 | <b>symbols or less.</b>  |
| requestId         | String          | Unique identifier of FSB credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player. <b>Max length of this parameter depends on <u>bonusCode</u>. The sum of their length has to be 252 symbols or less.</b>  |
| platform          | String(10)      | The platform type (channel) on which the game is played.<br><br>Possible values: <ul style="list-style-type: none"> <li>• “MOBILE” – mobile device</li> <li>• “WEB” – desktop device</li> </ul>  |
| error             | Integer         | Error code.  |
| description       | String (100)    | Response status short description.   |
| usedPromo         | Decimal (10, 2) | Part of bet amount which is taken from bonus balance   |
| ipAddress         | String (32)     | IP address of the player   |
| campaignId        | String          | Id of the campaign.<br><br>In case of CJP call, campaignId is going to have value X:Y where both X and Y are long numbers.<br>Examples: 3672:11  |
| campaignType      | String(3)       | Type of the campaign   |
| promoWinAmount    | Decimal (10, 2) | Prize amount that the player is awarded with during a promotional campaign   |
| promoWinReference | String (100)    | Unique reference of the promotional transaction.   |
| promoCampaignId   | Long            | Id of the promotional campaign.  |
| promoCampaignType | String(1)       | Type of the promotional campaign.  |
| specPrizeAmount   | number          | number of FSB which was won by player in bingo game<br>Examples: 120.0; 35   |
| specPrizeCode     | String (100)    | unique FSB bonus code within PP system   |
| specPrizeType     | String(100)     | Type of free special prize<br>Possible values: <ul style="list-style-type: none"> <li>• “FRB” – For Bingo FRB-as-prize</li> <li>• “Text value” – for Bingo Jackpot physical prizes.<br/>This value is sent URL – encoded. For example “CITRO%C3%8BN%20C5”</li> </ul> |
| balanceBeforeWin  | Decimal (10, 2) | balanceBeforeWin is calculated either by won tier only or by all JP tiers depending on the option selected.<br><i>*For a more detailed description, please see 3.9 JackpotWin.</i>   |
| balanceAfterWin   | Decimal (10, 2) | balanceAfterWin is calculated either by won tier only or by all JP tiers depending on the option selected.<br><i>*For a more detailed description, please see 3.9 JackpotWin.</i>  |
| lobbyFilter       | String(100)     | Filter values which will be predefined when user will open Live Casino lobby category. Possible values available in section <b>18.4 Predefined filters in Live Casino Lobby categories.</b>  |
| instanceId        | String          | Instance id of the won tier.<br><i>*For a more detailed description, please see 3.9 JackpotWin.</i>  |

### 3.4 Authenticate

*Request path: POST /authenticate.html*

When the game is opening Pragmatic Play receives with URL security token generated by Casino Operator. Using this token Pragmatic Play will ask Casino Operator for player authentication and get the player's balance.

**Important:** Token from Authenticate response can be used in subsequent wallet requests for other games, launched from the inside of game or bingo client.

Pragmatic Play can send subsequent authenticate requests with the same token, when player:

- opens new casino game from built-in mini lobby
- opens bingo room from bingo lobby
- opens live casino game from live casino lobby

Sending additional Authenticate requests for inner opening is optional *and is not handled by the Pragmatic Play by default. In case Casino Operator need to receive additional authorization for inner opening - they should ask the Pragmatic Play's Technical Support for configuration.*

Operator should accept additional authenticate requests with active token for player.

#### *Request parameters*

| Name          | Description  | Status   |
|---------------|--|----------|
| hash          | Hash code of the request.  | Required |
| token         | Token of the player.   | Required |
| providerId    | Game Provider identifier.  | Required |
| gameId        | Id of the game.<br><i>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need individual bet limits to be applied when the game opens they should ask the Pragmatic Play's Technical Support for configuration.</i><br><br><i>This field is going to be included automatically in case of enabled "Dynamic Bet Scales" feature (related to the betLimits parameter in response)</i>                            | Optional |
| ipAddress     | IP address of the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i>   | Optional |
| chosenBalance | Amount of money player wants to spend in the game (for in-game lobby switch for Italian regulated market)<br><i>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need individual bet limits to be applied when the game opens they should ask the Pragmatic Play's Technical Support for configuration</i>   | Optional |
| launchingType | Type of game launch (for in-game lobby switch for Italian regulated market)<br>Possible values:<br><ul style="list-style-type: none"> <li>- "N" – normal launch</li> <li>- "L" - from in-game lobby</li> </ul> <i>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need individual bet limits to be applied when the game opens they should ask the Pragmatic Play's Technical Support for configuration</i> | Optional |

|               |   |          |
|---------------|---|----------|
| previousToken | Value if the token that was received from operator for the game that should be closed (for in-game lobby switch for Italian regulated market)<br>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need individual bet limits to be applied when the game opens they should ask the Pragmatic Play's Technical Support for configuration | Optional |
|---------------|---|----------|

### Response parameters

| Name         | Description  | Status   |
|--------------|--|----------|
| userId       | Identifier of the user within the Casino Operator's system.  | Required |
| currency     | Currency of the player.  | Required |
| cash         | Real balance of the player.  | Required |
| bonus        | Bonus balance of the player.   | Required |
| token        | Token/session of the player. Can be configured to be returned in all other API calls so Operator has control over it across playing process.<br>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.   | Optional |
| country      | Country of the player.   | Optional |
| jurisdiction | Jurisdiction of the player. Please see the 3.3 Data types section for more details.  | Optional |
| betLimits    | An optional element. How this is used is supplier specific, for example it might constitute a further restriction on limits already in place on the game. Structure of the element:<br><br><b>defaultBet</b> – the default bet value<br><b>defaultTotalBet</b> – the default total bet value (in the game currency)<br><b>minBet</b> – the minimal individual bet amount<br><b>maxBet</b> – the maximal individual bet amount<br><b>maxTotalBet</b> – the maximum total bet amount (in the game currency)<br><b>minTotalBet</b> – the minimum total bet amount (in the game currency)<br>optionally for in-game buy feature:<br><b>extMinTotalBet</b> – the minimum total bet amount for in-game buy feature (in the game currency)<br><b>extMaxTotalBet</b> - the maximum total bet amount for in-game buy feature (in the game currency)<br>If extMinTotalBet and extMaxTotalBet are not included in response, default values for in-game buy feature will be used<br>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need individual bet limits to be applied when the game opens, they should ask the Pragmatic Play's Technical Support for configuration. | Optional |
| extraInfo    | An optional element set of additional parameters for different purposes like jurisdiction requirements fulfillment<br>Possible values:<br><ul style="list-style-type: none"> <li><b>"promoAvailable": "y"</b> - Player is allowed to participate promo campaign*</li> <li><b>"promoAvailable": "n"</b> - Player is not allowed to participate promo campaign*</li> </ul> Example: "extraInfo":{"promoAvailable":"y"}<br>* - including FSB, Tournament and Prize Drops campaign<br>Logic of this parameter application is described in note below<br><ul style="list-style-type: none"> <li><b>aamsTicket</b> – AAMS ticket value</li> <li><b>aamsSessionId</b> AAMS session ID</li> </ul> aamsTicket and aamsSessionId parameters are used for Italian lobby solution.<br>Example: "extraInfo":{"aamsTicket":"someaamsticket","aamsSessionId":"someaamssessionid"}<br><ul style="list-style-type: none"> <li><b>jurisdictionMaxBet</b> - Max bet limit for bet scale. If the current max bet exceeds the limit, the bet scale will be reduced to the specified value. The limit should be</li> </ul>   | Optional |

| <i>provided in the player's currency.</i> |                                    |          |
|---|------------------------------------|----------|
| error                                     | Response status.                   | Required |
| description                               | Response status short description. | Required |

The currency of the player is set up when the player opens a game for the first time, and the player account is created in the Pragmatic Play database, with the userId and currency received in the response on the Authentication request.

**Important:** Currency cannot be changed after the player account is created.

Logic of **extraInfo** / **promoAvailable** parameter application for promo campaigns (incl. FSB, Tournament and Prize Drop campaigns)

- Public promo campaigns: parameter value is applied for all players;
- Private promo campaigns with **include** list: Player which is in include list will be able to participate regardless of parameter value. Rest of players are unable to participate;
- Private promo campaigns with **exclude** list: Player which is in exclude list will not be able to participate regardless of parameter value. Rest of players participate depending on parameter value

#### Example of HTTP request:

```
POST /authenticate.html HTTP/1.1
Host: someoperatoromain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

providerId=pragmaticplay&hash=e1467eb30743fb0a180ed141a26c58f7&token=5v93mto7jr
```

#### Example of JSON response:

```

### 3.5 Balance

*Request path: POST /balance.html*

Using this method a Pragmatic Play system will know a current balance of player and will show it in the game.

*Request parameters*

| Name       | Description  | Status   |
|------------|--|----------|
| hash       | Hash code of the request.  | Required |
| providerId | Game Provider identifier.  | Required |
| userId     | Identifier of the user within the Casino Operator's system.  | Required |
| token      | Token of the player from Authenticate response.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |

*Response parameters*

| Name         | Description  | Status   |
|--------------|--|----------|
| currency     | Currency of the player.  | Required |
| cash         | Real balance of the player.  | Required |
| bonus        | Bonus balance of the player.   | Required |
| totalBalance | Full player's balance on casino side, used for menu of balance choosing during switch of games<br>Can be used for Italian Regulated market | Optional |
| error        | Response status.   | Required |
| description  | Response status short description.   | Required |

*Example of HTTP request:*

```
POST /balance.html HTTP/1.1
Host: someoperatoromain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

providerId=pragmaticplay&userId=421&hash=b4672931ee1d78e4022faaadf58e37db
```

*Example of JSON response:*

```
{
  "currency": "USD",

### 3.6 Bet

*Request path: POST /bet.html*

Using this method Pragmatic Play system will check the player balance on Casino Operator side to ensure they still have the funds to cover the bet. Amount of the bet must be subtracted from player balance in Casino Operator system.

**Important:** The call is idempotent, i.e. sending bet again only creates one transaction. For retries actual player's balance should be returned.

#### Request parameters

| Name         | Description   | Status    |
|--------------|---|-----------|
| hash         | Hash code of the request  | Required  |
| userId       | Identifier of the user within the Casino Operator's system.   | Required  |
| gameId       | Id of the game.   | Required  |
| roundId      | Id of the round.  | Required  |
| amount       | Amount of the bet. Minimum is 0.00.   | Required  |
| reference    | Unique reference of this transaction.   | Required  |
| providerId   | Game Provider id.   | Required  |
| timestamp    | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)  | Required  |
| roundDetails | Additional information about the current game round.<br>In case Casino Operator needs additional bet description to be sent (such as bet type and seat number for live casino or antebet or purchased bonus for slots), they should ask the Pragmatic Play's Technical Support for additional configuration. In this case Operator should accept data type: String(4000) for roundDetails parameter in <u>current method</u> , <u>Game History API</u> , <u>Data feeds and reports API</u> .<br>Examples of roundDetails parameter with enabled bet description: <ul style="list-style-type: none"> <li>• "spin" – default bet</li> <li>• "spin,bonusBuy" – bet with purchased bonus</li> <li>• "spin,anteBet" – on Ante bet</li> <li>• "spin,superSpin" – on Super Spins</li> <li>• "type:main,desc:Tie" – Live casino Example 1<br/>"type:bets,desc:[{"c":"Even","a":"3.0"}, {"c":"OG","a":"3.0"}, {"c":"Red","a":"3.0"}]" – Live casino Example 2</li> </ul> | Required  |
| bonusCode    | Id of the bonus in Casino Operator system.<br><br>If requestId has been passed, then this parameter is going to contain both bonusCode and requestId concatenated with </> separator.<br><br>(*is mandatory in case of FSB API is implemented)<br>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.  | Optional* |
| platform     | The platform type (channel) on which the game is played.<br>Possible values: <ul style="list-style-type: none"> <li>• "MOBILE" – mobile device</li> <li>• "WEB" – desktop device</li> </ul> The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical  | Optional  |

|  |  |          |
|--|--|----------|
| <i>Support for additional configuration.</i> |  |          |

```

### 3.7 Result

*Request path: POST /result.html*

Using this method the Pragmatic Play system will send to Casino Operator the winning result of a bet. The Casino Operator will change the balance of the player in accordance with this request and return the updated balance.

Result request may contain a prize that the player is awarded with during the game round, if there is an active promotional campaigns like Prize Drop. Parameters related to the Prize Drop prizes are optional and should be configured by PragmaticPlay team based on Operator's request.

**Important:** The call is idempotent, i.e. sending result again with the same reference number creates only one transaction. For retries actual player's balance should be returned.

#### *Request parameters*

| Name         | Description   | Status    |
|--------------|---|-----------|
| hash         | Hash code of the request  | Required  |
| userId       | Identifier of the user within the Casino Operator's system.   | Required  |
| gameId       | Id of the game.   | Required  |
| roundId      | Id of the round.  | Required  |
| amount       | Amount of the win.  | Required  |
| reference    | Unique reference of this transaction.   | Required  |
| providerId   | Game Provider id.   | Required  |
| timestamp    | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)  | Required  |
| roundDetails | <p>Additional information about the current game round.</p> <p>Examples of roundDetails parameter with enabled result description:</p> <p>"roundDetails": "spin,totalBet:200.0,freeSpinCount:18,totalWin:284.0,baseWin:4.0,freeSpinWin:280.0"</p> <ul style="list-style-type: none"> <li>"spin" – default bet</li> <li>"totalBet" – Total bet amount (only for free spin round)</li> <li>"totalWin" – Total win amount (only for free spin round)</li> <li>"baseWin" – Win on a base spin (<i>optional</i>)</li> <li>"freeSpinCount" – Free spin total count (<i>optional</i>)</li> </ul> <p>Calculates as:</p> <p>freeSpinCount = freeSpinCount + reSpinCount + 1 (if any bonusGame played)</p> <ul style="list-style-type: none"> <li>"freeSpinWin" – Free spin total win (<i>optional</i>)</li> </ul> <p>Calculates as:</p> <p>freeSpinWin = freeSpinWin + reSpinWin + gamblingWin + bonusGamesWins</p> <p><i>The fields (baseWin/freeSpinCount/freeSpinWin) is optional and is not sent to the Casino Operator by default. ### 3.8 BonusWin

*Request path: POST /bonusWin.html*

Using this method a Pragmatic Play system will send to Casino Operator winning result of all rounds played on Free Spins Bonus. Casino Operator will change a player balance in appliance with this request and will return an updated balance.

**Important:** The call is idempotent, i.e. sending result again with the same reference number creates only one transaction. For retries actual player's balance should be returned

**Important:** The call is asynchronous and is not linked to the end of the game round.

#### Request parameters

| Name                          | Description   | Status                   |
|-------------------------------|---|--------------------------|
| hash                          | Hash code of the request  | Required                 |
| userId                        | Identifier of the user within the Casino Operator's system.   | Required                 |
| amount                        | Amount of the win.<br>Minimum is 0.00 (Zero amount is treated as loss).   | Required                 |
| reference                     | Unique reference of this transaction.   | Required                 |
| providerId                    | Game Provider id.   | Required                 |
| timestamp                     | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)  | Required                 |
| bonusCode                     | Id of the bonus in Casino Operator system.<br>(*is mandatory in case of FSB API is implemented)<br>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration. | Required                 |
| roundId                       | Id of the last played round in Free Spins Bonus<br>The field is optional and is not sent to the Casino Operator by default. ### Response parameters

| Name          | Description                        | Status   |
|---------------|------------------------------------|----------|
| transactionId | Id of the transaction in wallet.   | Required |
| currency      | Currency of the player.            | Required |
| cash          | Real balance of the player.        | Required |
| bonus         | Bonus balance of the player.       | Required |
| error         | Response status.                   | Required |
| description   | Response status short description. | Required |

### Example of HTTP request:

```
POST /bonusWin.html HTTP/1.1
Host: someoperatoromain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

reference=585d0257f89c56f5ed6b2e37&bonusCode=test_pp_frb1&amount=1.0&providerId=pragmaticplay&userId=421&hash=242d4d029c20e6e4692a4b88398f4fdc&timestamp=1482490455354
```

### Example of JSON response:

```
{
  "transactionId": 1482490793341,
  "currency": "USD",
  "cash": 99710.04,
  "bonus": 99.99,
  "error": 0,
  "description": "Success"
}
```

### 3.9 JackpotWin

*Request path: POST /jackpotWin.html*

Using this method a Pragmatic Play system will notify Casino Operator about Jackpot winning. Operator should handle the transaction in their system and send the jackpot win transaction id back to the Pragmatic Play.

**Important:** The call is idempotent, i.e. sending result again with the same reference number creates only one transaction. For retries actual player's balance should be returned.

**Important:** Please pay attention that in slot Jackpots, progressive and non-progressive wins are sent together inside the amount field in jackpotWin method.

Pragmatic Play pays just progressive wins to operator. To receive info on progressive and non-progressive win parts separately, Operator can ask the Pragmatic Play's Technical Support to enable optional parameter jackpotDetails in jackpotWin request. In this case jackpotDetails will be sent like this **progressive:XX, non-progressive:YY**

For example: amount: 150 jackpotDetails: progressive:100, non-progressive:50

#### Request parameters

| Name           | Description  | Status   |
|----------------|--|----------|
| hash           | Hash code of the request   | Required |
| providerId     | Game Provider id.  | Required |
| timestamp      | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)   | Required |
| userId         | Identifier of the user within the Casino Operator's system.  | Required |
| gameId         | Id of the game.  | Required |
| roundId        | Id of the game round.  | Required |
| jackpotId      | Id of the jackpot.   | Required |
| jackpotDetails | Detailed information about the won jackpots in the round .<br>Examples:<br>Bingo: {"jackpotDetails":{"2701":{"amount":1.00,"prizeType": "monetary"},<br>"2702":{"amount":2.00,"prizeType": "monetary"}}}<br>Slots: {"progressive":130.34375,"non-progressive":3125.0}"   | Optional |
| amount         | Total amount of all jackpot winnings in the round.   | Required |
| reference      | Unique reference of the transaction within the Pragmatic Play system.  | Required |
| platform       | The platform type (channel) on which the game is played.<br><br>Possible values: <ul style="list-style-type: none"> <li>• "MOBILE" – mobile device</li> <li>• "WEB" – desktop device</li> </ul> The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration. | Optional |

|                             |   |                          |

  "description": "Success"
}
```

### 3.10 EndRound

*Request path: POST /endRound.html*

Every time a game round is over, the Pragmatic Play system will call EndRound method, so that Operator can finalize the game round transactions on their side in real time.

If Operator does not need to finalize transactions in real time it is strongly recommended to disable EndRound functionality on the Pragmatic Play side. Instead, Data Feed API can be used for transaction finalization, in order to decrease the number of requests to the Operator system and keep traffic between two systems as light as possible.

**Important:** EndRound request may be sent more than once. If the game round is already finalized, Operator should ignore the EndRound request and return the success response.

#### *Request parameters*

| Name         | Description  | Status   |
|--------------|--|----------|
| hash         | Hash code of the request   | Required |
| userId       | Identifier of the user within the Casino Operator's system.  | Required |
| gameId       | Id of the game.  | Required |
| roundId      | Id of the round.   | Required |
| providerId   | Game Provider id.  | Required |
| bonusCode    | Id of the bonus in Casino Operator system.<br><i>(The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.)</i>  | Optional |
| platform     | The platform type (channel) on which the game is played.<br><br>Possible values: <ul style="list-style-type: none"> <li>"MOBILE" – mobile device</li> <li>"WEB" – desktop device</li> </ul> <i>The field is optional and is not sent to the Casino Operator by default. | description | Response status short description. | Required |

### Example of HTTP request:

```
POST /endRound.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

gameId=vs50hercules&providerId=pragmaticplay&userId=421&roundId=5103579948&platform=WEB&hash=0755b1f739655f4d394b20575a7570df
```

### Example of JSON response:

```
{  
  "cash": 99764.99,  
  "bonus": 99.99,  
  "error": 0,  
  "description": "Success"  
}
```

### 3.11 Refund

*Request path: POST /refund.html*

Pragmatic Play system may use this method to rollback a bet transaction on the Casino Operator side, in order to reverse the transaction and adjust player's balance. When receive a Refund request Operator have to return money back to player's balance.

**Important:** The call is idempotent, i.e. sending refund for existing bet again only creates one transaction.

**Important:** If bet transaction is not found then nothing should happen on the Casino Operator side and success (0) or specific error code for this situation should be returned.

#### *Request parameters*

| Name       | Description   | Status   |
|------------|---|----------|
| hash       | Hash code of the request  | Required |
| userId     | Identifier of the user within the Casino Operator's system.   | Required |
| reference  | Reference from the original bet transaction.  | Required |
| providerId | Game Provider id.   | Required |
| platform   | <p>The platform type (channel) on which the game is played.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>“MOBILE” – mobile device</li> <li>“WEB” – desktop device</li> </ul> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p> | Optional |
| amount     | <p>Amount to be refunded.</p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>  | Optional |
| gameId     | <p>Id of the game.</p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>   | Optional |
| roundId    | <p>Id of the round.</p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>  | Optional |
| timestamp  | <p>Date and time when the transaction is processed on the Pragmatic Play side<br/>(Unix epoch time in milliseconds, for example : 1470926696715)</p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>   | Optional |

|              |  |           |
|--------------|--|-----------|
| roundDetails | <p>Additional information about the current game round.</p> <p>If the Free Chips API is implemented, it will contain the number of free chips in the refunded round.</p> <p><i>*For example, "roundDetails":{"countOfFreeChips:10"}</i></p> <p><i>The field is optional and is not sent to the Operator by default. If Casino Operator needs this parameter to be sent with request, they should ask the Pragmatic Play's Technical Support for additional configuration, and accept enhanced roundDetails format (please see 3.3 Data types section).</i></p> | Optional  |
| bonusCode    | <p>Id of the bonus in Casino Operator system.</p> <p><i>(*is mandatory in case of FSB API or Free Chips API is implemented)</i></p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>   | Optional* |
| token        | <p>Token of the player from Authenticate response.</p> <p><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i></p>  | Optional  |

### Response parameters

| Name          | Description   | Status   |
|---------------|---|----------|
| transactionId | Id of the refund transaction in Casino Operator system. | Required |
| error         | Response status.  | Required |
| description   | Response status short description.                      | Required |

### Example of HTTP request:

```
POST /refund.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

reference=585c2692f89c56f5ed083692&providerId=pragmaticplay&userId=421&platform=WEB&hash=0078aaf-b64b316a05c91124e4411541a
```

### Example of JSON response:

```
{
  "transactionId": "C1482435726839",
  "error": 0,
  "description": "Success"
}
```

### 3.12 GetBalancePerGame

*Request path: POST /getBalancePerGame.html*

The method allows Pragmatic Play to get player's balance available for certain games. This method is applicable to operators that needs different amount of money to be available in the game client depending on the game type and the policy within Casino Operator system.

*Request parameters*

| Name       | Description   | Status   |
|------------|---|----------|
| hash       | Hash code of the request.   | Required |
| userId     | Identifier of the user within the Casino Operator's system.   | Required |
| providerId | Game Provider Id.   | Required |
| gameIdList | The list of games for which player's balance should be returned. It is a string contains game id separated by comma.  | Required |
| token      | Token of the player from Authenticate response.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i>  | Optional |
| platform   | The platform type (channel) on which the game is played.<br><br>Possible values: <ul style="list-style-type: none"> <li>• "MOBILE" – mobile device</li> <li>• "WEB" – desktop device</li> </ul> <i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |

*Response parameters*

| Name          | Description  | Status   |
|---------------|--|----------|
| gamesBalances | The list of player's balances per game. Contains data structures with the following fields:<br>gameId – id of the game<br>cash – Real balance of the player<br>bonus – Bonus balance of the player | Required |
| totalBalance  | Full player's balance on casino side, used for menu of balance choosing during switch of games<br>Can be used for Italian Regulated market   | Optional |
| error         | Response status.   | Required |
| description   | Response status short description.   | Required |

*Example of HTTP request:*

```
POST /getBalancePerGame.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

providerId=...&userId=...&gameIdList=vs20cd,vs20bl,vs7monkeys
```

*Example of JSON response:*

```
{  "gamesBalances": [
    {"gameID": "vs20cd", "cash": 25.02, "bonus": 0.00},
    {"gameID": "vs9c", "cash": 12.02, "bonus": 0.00}
  ],
  "error": 0,
  "description": "Success"
}
```

### 3.13 PromoWin

*Request path: POST /promoWin.html*

Using this method the Pragmatic Play system will notify Casino Operator about winning that the player is awarded as a result of a campaign that is finished. Notification is asynchronous and may come to the operator with a short delay after the campaign is over. Operator should handle the transaction in their system and send promo win transaction id back to the Pragmatic Play.

**Important:** The call is idempotent, i.e. sending result again with the same reference number creates only one transaction. For retries actual player's balance should be returned

**Important:** This call is also used for notification about the FSB as Prize winnings from prize drops or tournament.

**Important:** The call is also used for notification about community jackpot winnings. In case Casino Operator would like to receive the CJP value also (in the campaignType parameter), they should ask the Pragmatic Play's Technical Support for additional configuration.

#### Request parameters

| Name         | Description   | Status   |
|--------------|---|----------|
| hash         | Hash code of the request  | Required |
| providerId   | Pragmatic Play provider id in Operator's system.  | Required |
| timestamp    | Date and time when the transaction is processed on the Pragmatic Play side<br>(Unix epoch time in milliseconds, for example : 1470926696715)  | Required |
| userId       | Id of the player within the operator's system.  | Required |
| campaignId   | Id of the campaign.   | Required |
| campaignType | Type of the campaign. Available values are:<br>T – Tournament<br>CJP – Community Jackpot<br>CB – Cashback<br>MR – Prize Drop (FR as prize)  | Required |
| amount       | Prize amount that the player is awarded with.<br>Minimum is 0.00 (Zero amount is treated as loss).<br><i>The prize amount must be added to the player's cash balance.</i>   | Required |
| currency     | Player's currency.  | Required |
| reference    | Unique reference of the transaction within the Pragmatic Play system.   | Required |
| roundId      | Id of the round (the last round in Tournaments achievement which leads to changing the scores)<br><br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| gameId       | Symbolic unique identifier of the game.   | Optional |

|          |   |          |
|----------|---|----------|
| dataType | Portfolio type of promo campaign<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
|----------|---|----------|

### Response parameters

| Name          | Description                        | Status   |
|---------------|------------------------------------|----------|
| transactionId | Id of the transaction in wallet.   | Required |
| currency      | Currency of the player.            | Required |
| cash          | Real balance of the player.        | Required |
| bonus         | Bonus balance of the player.       | Required |
| error         | Response status.                   | Required |
| description   | Response status short description. | Required |

### Example of HTTP request:

```
POST /promoWin.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

reference=some_reference&campaignId=123456&amount=200.0&providerId=PragmaticPlay&campaignType=T
&userId=some_userId&timestamp=1547473412242&currency=USD&hash=62918d1ba53bee8225c0f2affcf20603
```

### Example of JSON response:

```
{
  "transactionId": 1482492905503,
  "currency": "USD",
  "cash": 99815.04,
  "bonus": 99.99,
  "error": 0,
  "description": "Success"
}
```

### 3.14 SessionExpired

*Request path: POST /session/expired*

Using this method the Pragmatic Play system will notify Casino Operator that player's session has expired in Pragmatic Play system due to long inactivity or game closing.

The method is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this method to be sent, they should ask the Pragmatic Play's Technical Support for additional configuration

*Request parameters*

| Name       | Description  | Status   |
|------------|--|----------|
| hash       | Hash code of the request   | Required |
| providerId | Pragmatic Play provider id in Operator's system.   | Required |
| sessionId  | Player's game session id on Pragmatic Play side  | Required |
| playerId   | Id of the player within the operator's system.   | Required |
| token      | Token of the player from Authenticate response.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |

*Response parameters*

| Name        | Description                        | Status   |
|-------------|------------------------------------|----------|
| error       | Response status.                   | Required |
| description | Response status short description. | Required |

*Example of HTTP request:*

```
POST /cgAPItest/v3/httpService/session/expired HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded

providerId=PragmaticPlay&sessionId=6fd2d6f3bb8f4c5a9fadf15d81206af2&playerId=123456&hash=c46d5b113e81d306831a06765e12067f
```

*Example of JSON response:*

```
{
  "error": 0,
  "description": "Success"
}
```

### 3.15 Adjustment

**Request path:** `POST /adjustment.html`

Using this method, the Pragmatic Play system will send the Casino Operator the amount of the player's balance to be adjusted (in case the request contains a negative amount, the player's balance should be decreased). The Casino Operator will change the balance of the player in accordance with this request and return the updated balance. In case of negative amount in request, and insufficient player's balance Operator should return error code 1 and description "Insufficient balance".

**Important:** The call is idempotent, i.e. sending result again with the same reference number creates only one transaction. For retries actual player's balance should be returned.

**Important:** the request is offline (does not require the player to be online). It is used only for the **Live Casino** portfolio.

#### Request parameters

| Name           | Description   | Status    |
|----------------|---|-----------|
| hash           | Hash code of the request  | Required  |
| userId         | Identifier of the user within the Casino Operator's system.   | Required  |
| gameId         | ID of the game.   | Required  |
| token          | Token of the player from Authenticate response (Token which was used in session when particular round was played).<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i>   | Optional  |
| roundId        | ID of the round.  | Required  |
| amount         | Amount to be adjusted (may have either positive or negative value)  | Required  |
| reference      | Unique reference of this transaction.   | Required  |
| providerId     | Game Provider ID.   | Required  |
| validBetAmount | Valid bet amount.   | Required  |
| timestamp      | Date and time when the transaction is processed on the Pragmatic Play side (Unix epoch time in milliseconds, for example : 1470926696715)   | Required  |
| roundDetails   | Additional information about the current game round.<br>If the Free Chips API is implemented, it will contain the number of free chips in the refunded round.<br><i>*For example, "roundDetails":{"countOfFreeChips:10"}</i><br><i>The field is optional and is not sent to the Operator by default. If Casino Operator needs this parameter to be sent with request, they should ask the Pragmatic Play's Technical Support for additional configuration, and accept enhanced roundDetails format (please see 3.3 Data types section).</i> | Optional  |
| bonusCode      | Id of the bonus in Casino Operator system.<br><i>(*is mandatory in case of Free Chips API is implemented)</i><br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i>  | Optional* |

*Response parameters*

| Name          | Description                       | Status   |
|---------------|-----------------------------------|----------|
| transactionId | ID of the transaction in wallet   | Required |
| currency      | Currency of the player            | Required |
| cash          | Real balance of the player        | Required |
| bonus         | Bonus balance of the player       | Required |
| error         | Response status                   | Required |
| description   | Response status short description | Required |

*Example of HTTP request:*

```
POST /adjustment.html
HTTP/1.1
Host: someoperatordomain.net

}
```

### 3.16 RoundDetails

*Request path: POST /roundDetails.html*

Using this method the Pragmatic Play system will send to Casino Operator details of slot machine or RNG table game results, for particular game round, which then can be sent to the Regulator.

**Important:** This request is sent only after the EndRound call, hence it has to be enabled and supported.

#### Request parameters

| Name          | Description   | Status   |
|---------------|---|----------|
| hash          | Hash code of the request                                    | Required |
| userId        | Identifier of the user within the Casino Operator's system. | Required |
| roundId       | ID of the round.  | Required |
| providerId    | Game Provider ID.   | Required |
| smResult      | The details of slot machine or RNG table game result        | Required |
| gameCategory  | Game category   | Required |
| betMultiplier | Bet multiplier  | Required |

#### Response parameters

| Name        | Description                       | Status   |
|-------------|-----------------------------------|----------|
| error       | Response status                   | Required |
| description | Response status short description | Required |

#### Example of HTTP request:

```
POST /roundDetails.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

hash=681c32ea7733fcd01135e5ad48a0a8db&providerId=providerLogin_1&userId=1&roundId=123451&smResult=1%3A10%3B2%3B9%3B3%3B2%233%3B1%3B2%3B1%3B4%2312%3B12%3B12%3B4%3B1%23R%23S%23VS%23222%23MV%232%2C00%23MT%232%23&betMultiplier=50
```

#### Example of JSON response:

```
{
  "error": 0,
  "description": "Success"
}
```

### 3.17 Error codes

Below table contains the error codes that should be returned by Casino Operator in the response to Seamless Wallet API calls.

| Code | Description   | Send Reconciliation call |                                    |
|------|---|--------------------------|------------------------------------|
|      |   | Bet (send Refund)        | Result/Refund etc.<br>(send retry) |
| 0    | Success.  | No                       | No                                 |
| 1    | Insufficient balance. The error should be returned in the response on the Bet request.  | No                       | Yes                                |
| 2    | Player not found or is logged out. Should be returned in the response on any request sent by Pragmatic Play if the player can't be found or is logged out at Casino Operator's side.  | Yes                      | Yes                                |
| 3    | Bet is not allowed. Should be returned in any case when the player is not allowed to play a specific game. For example, because of special bonus.   | No                       | Yes                                |
| 4    | Player authentication failed due to invalid, not found or expired token.  | Yes                      | Yes                                |
| 5    | Invalid hash code. Should be returned in the response on any request sent by Pragmatic Play if the hash code validation is failed.  | Yes                      | Yes                                |
| 6    | Player is frozen. Casino Operator will return this error in the response of any request if player account is banned or frozen.  | Yes                      | Yes                                |
| 7    | Bad parameters in the request, please check post parameters.  | Yes                      | Yes                                |
| 8    | Game is not found or disabled. This error should be returned on Bet request if the game cannot be played by some reason. Bet result request with winning amount should be processed as intended, even if the game is disabled.  | Yes                      | Yes                                |
| 50   | Bet limit has been reached. The code is relevant for regulated markets.   | No                       | Yes                                |
| 100  | Internal server error. Casino Operator will return this error code if their system has internal problem and cannot process the request at the moment and Operator logic requires a retry of the request. <u>Request will follow Reconciliation process</u>  | Yes                      | Yes                                |
| 120  | Internal server error. Casino Operator will return this error code if their system has internal problem and cannot process the request and Operator logic does not require a retry of the request. <u>Request will NOT follow Reconciliation process</u>  | No                       | No                                 |
| 130  | Internal server error on <b>EndRound</b> processing. Casino Operator will return this error code if their system has internal problem and cannot process the <b>EndRound</b> request, and Operator logic <u>requires</u> a retry of the request. <u>This error code should be used for Endround method only and not for other methods</u>   | -                        | -                                  |
| 210  | Reality check warning   | Yes                      | Yes                                |
| 310  | Player's bet is out of his bet limits. Should be returned if player's limits have been changed, and the bet is out of new limit levels. Game client will show a proper error message, and ask player to reopen the game. After game reopening new bet limits will be applied.<br>The error is relevant for operators that send player's bet limits in response on Authenticate request. | No                       | No                                 |

## IV. Balance Transfer API

This is a simple API for game Operator to connect to the Pragmatic Play game system. API is an HTTP listener, which listens POST requests coming to an URL with the request mappings below.

All responses should be in JSON format and should contain error code and error description, which is empty in the case if no error occurs.

URL of the HTTP service will be provided by Pragmatic Play for the production and test environments and looks like:

*`https://{API service domain}/IntegrationService/v3/http/CasinoGameAPI`*

Balance Transfer HTTP service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

It is possible to play only one portfolio at the same time with this API.

### 4.1 Game opening

After Operator calls StartGame method at Pragmatic Play side he gets an URL for game opening.

The link will look like:

*`https://{game server domain}/gs2c/openGame.do?tc={ticket}&stylename={secureLogin}`*

where:

- game server domain – a domain name for game opening and playing;
- ticket – secure one-time token generated by Pragmatic Play.

### 4.2 Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them in `key1=value1&key2=value2`.
3. Append secret key, e.g.: `key1=value1&key2=value2SECRET`.
4. Calculate the hash by using MD5.
5. Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.

### 4.3 Data types

| Name                  | Type            | Description   |
|-----------------------|-----------------|---|
| externalPlayerId      | String(100)     | Unique identifier of the player within the Casino Operator system. Parameter value is case-sensitive.<br><i>Example: joe1001, 2644987, playerABC*, playerAbc*</i><br>* playerABC and playerAbc – are two different player accounts within Pragmatic Play system   |
| playerId              | String(100)     | Unique identifier of the player within the Pragmatic Play system. May be used for troubleshooting.<br><i>Example: 1000, 2644987</i>   |
| currency              | String(3)       | Currency of the player, 3-character ISO 4217 code.<br><i>Example: USD, EUR</i>  |
| language              | String(2)       | Language code in ISO 639-1 standard (e.g. en, fr, it).  |
| externalTransactionId | String(100)     | Unique identifier of the transaction within Casino Operator system.<br><i>Example: 5623489, CHR789452, c0304c72-514f-47a4-8ae1-eb755224391b</i>   |
| transactionId         | String(100)     | Unique identifier of the transaction within Pragmatic Play system.<br><i>Example: 5623489, CHR789452, c0304c72-514f-47a4-8ae1-eb755224391b</i>  |
| amount                | Decimal (10, 2) | Amount that is transferred in or out of the player's balance. Can have positive (deposit) or negative (withdrawal) values.<br><i>Example: 20.35, -40.00</i>   |
| balance               | Decimal (10, 2) | Player's current balance. Example: '100.00'.  |
| gameId                | String(20)      | Symbolic unique identifier of the game within the Pragmatic Play system.<br><i>Example: vs25queenofgold, vs50aladdin, cs5triple8gold, bjma, rla, vpa</i><br><br>The list of available games may be obtained by Casino Operator by calling GetCasinoGames method of CasinoGameAPI of <i>Integration simple HTTP Service</i> .  |
| platform              | String(20)      | Platform for which the game should be opened.<br>Available values: <ul style="list-style-type: none"> <li>• MOBILE – if game should be opened on mobile devices</li> <li>• WEB – if game will be opened on desktop devices</li> </ul> If this parameter is not defined for game opening request, desktop version of the game will be opened by default.<br>The list of platforms, supported by specific game, can be found in Game Library. |
| URL                   | String(250)     | URL of a certain resource on the Casino Operator or Pragmatic Play website. LobbyUrl, CashierURL – are the links to Casino Operator's resources that will be opened when player clicks "Fund" or "Home" button in the game. GameURL – is the link for opening a game on Pragmatic Play's game server.   |
| error                 | Integer         | 0 - if the request was processed successfully or error code in other case.  |
| description           | String (250)    | Description of the error for troubleshooting purpose.   |
| timestamp             | DateTime        | Date and time when the transfer is processed on the Pragmatic Play side.  |
| timepoint             | Long            | Time point  |

## 4.4 CreatePlayer

*Request path: POST /player/account/create/*

Using this method Casino Operator will create player's account within the Pragmatic Play system. This method should be called before player is sent to the Pragmatic Play's games.

*Request parameters*

| Name             | Description   | Status   |
|------------------|---|----------|
| secureLogin      | User name for authentication in the Casino Game API service | Required |
| externalPlayerId | Id of the player within the Operator system.                | Required |
| currency         | Currency of the player.                                     | Required |
| hash             | Hash code of the request.                                   | Required |

*Response parameters*

| Name        | Description   |
|-------------|---|
| playerId    | Id of the player within the Pragmatic Play system.<br>* is returned only on <b>first</b> request to create player with the same externalPlayerId. |
| error       | Error code.   |
| description | Description of the error for troubleshooting.   |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/player/account/create/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=test_player&currency=USD&hash=620a4016ae32ea0ef-bebfelb3544571c
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "playerId": 6749178
}
```

## 4.5 Transfer

*Request path: POST /balance/transfer/*

This method transfers funds in to player's balance (i.e. deposit) and out of the player's balance (i.e. withdrawal) within Pragmatic Play system. Positive amount of money indicates fund in and negative amount means fund out transaction.

**Important:** In cases where transfer call fails due to:

- **network error (HTTP status  $\neq$  200)**
- **error: 1 (description: "internal error")** in response

Operator should send idempotent retry calls (with the same externalTransactionId).  
Recommended actions are specified in 4.11 Error codes

**Important:** The call is idempotent, i.e. sending it again only creates one transaction.

### Request parameters

| Name                  | Description   | Status   |
|-----------------------|---|----------|
| secureLogin           | User name for authentication in the Casino Game API service   | Required |
| externalPlayerId      | Id of the player within the Casino Operator system.   | Required |
| externalTransactionId | Id of the transaction within Casino Operator system.  | Required |
| amount                | Amount to be added to player's balance (positive value) or to be subtracted from player's balance (negative value), in player's currency. | Required |
| hash                  | Hash code of the request.   | Required |

### Response parameters

| Name          | Description  |
|---------------|--|
| transactionId | Id of the transfer transaction within the Pragmatic Play system. |
| balance       | Player's balance after successful transaction.                   |
| error         | Error code.  |
| description   | Description of the error for troubleshooting.                    |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/CasinoGameAPI/balance/transfer/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=test_player&externalTransactionId=EXT123456789&hash=380720e974ae2b775ce933fb73eb8fcf&amount=999.99
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK",
  "transactionId": 1908759,
  "balance": 999.99
}
```

## 4.6 GetTransferStatus

*Request path: POST /balance/transfer/status/*

This method returns the status of a particular transaction that transferred the money in or out the player's balance on the Pragmatic Play side.

**Important:** This method will return player's balance after successful transaction for all transactions that was created not earlier than August 3, 2017. For older transactions player's balance in the response will be null. Description field of the response will contain the following text: "Transaction is older than 3.08.2017".

### Request parameters

| Name                  | Description   | Status   |
|-----------------------|---|----------|
| secureLogin           | User name for authentication in the Casino Game API service | Required |
| externalTransactionId | Id of the transaction within Casino Operator system.        | Required |
| externalPlayerId      | Id of the player within the Casino Operator system.         | Optional |
| hash                  | Hash code of the request.                                   | Required |

### Response parameters

| Name          | Description  |
|---------------|--|
| transactionId | Id of the transfer transaction within the Pragmatic Play system.   |
| status        | Status of the transaction: <ul style="list-style-type: none"> <li>'Success' – The transaction was successfully processed</li> <li>'Not found' – The transaction was not found (was not processed)</li> </ul> |
| amount        | Amount added to player's balance (positive value) or subtracted from player's balance (negative value), in player's currency.  |
| balance       | Player's balance after successful transaction.<br><i>Note: The field will contain current player's balance in case the transaction was not processed.</i>  |
| error         | Error code.  |
| description   | Description of the error for troubleshooting.  |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/CasinoGameAPI/balance/transfer/status/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalTransactionId=EXT123456789&hash=380720e974ae2b775ce933fb73eb8fcf
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK",
  "transactionId": 1908759,
  "status": "Success",
  "amount": "999.99",
  "balance": 999.99
}
```

## 4.7 GetBalance

*Request path: POST /balance/current/*

Using this method Operator can get the current balance of the player in the Pragmatic Play system.

*Request parameters*

| Name             | Description   | Status   |
|------------------|---|----------|
| secureLogin      | User name for authentication in the Casino Game API service | Required |
| externalPlayerId | Id of the player within the Casino Operator system.         | Required |
| hash             | Hash code of the request.                                   | Required |

*Response parameters*

| Name        | Description  |
|-------------|--|
| balance     | Current player's balance within the Pragmatic Play system. |
| error       | Error code.  |
| description | Description of the error for troubleshooting.              |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/balance/current/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

externalPlayerId=test_player&secureLogin=username&hash=405281156fc4cace4d2385a8ead83290
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "balance": 999.99
}
```

## 4.8 StartGame

*Request path: POST /game/start/*

Using this method Operator can receive a valid URL to requested game. A specific ticket will be generated for player defined in the request for a particular game. This ticket will be verified on the Pragmatic Play side when player opens a game.

*Request parameters*

| Name             | Description   | Status  |
|------------------|---|---|
| secureLogin      | User name for authentication in the Casino Game API service   | Required  |
| externalPlayerId | Id of the player within the Operator system.  | Required  |
| gameId           | Id of the game within the Pragmatic Play system.  | Required  |
| language         | Language on which the game should be opened.  | Required  |
| platform         | Platform for which the game should be opened  | Optional  |
| cashierURL       | Link for opening the cashier on Casino Operator site when a player has no funds   | Optional  |
| lobbyURL         | Link for returning to Lobby page on Casino Operator site. This link is used for <i>Back to Lobby (Home)</i> button in mobile version of games   | Optional  |
| playMode         | If parameter not exist or value is REAL – return real game launch URL, if value is DEMO – return demo game launch URL.  | Optional  |
| jurisdiction     | Jurisdiction of the player.<br><i>*Within this method is used only for playMode=DEMO.</i>   | Optional  |
| hash             | Hash code of the request.   | Required  |
| ctlgroup         | The identification for specific table limits group (is applicable for Live Casino portfolio only)   | Optional  |
| lobbyFilter      | <p><b>When requesting a URL for LC game:</b><br/>Filter values which will be predefined when user will open Live Casino lobby category. Possible values available in section <b>18.4 Predefined filters in Live Casino Lobby categories</b></p> <p><b>When requesting a URL for Standalone Slots lobby:</b><br/>Category that will be opened in the Standalone Slots Lobby by default when it is launched.<br/>Possible options:</p> <ul style="list-style-type: none"> <li>• <b>forYou</b> – For You category will be opened when launching the lobby;</li> <li>• <b>allSlots</b> – All Slots category will be opened when launching the lobby;</li> <li>• <b>DDW</b> – Drops and Wins category will be opened when launching the lobby.</li> </ul> <p>If no option or incorrect value is sent in the 'lobbyFilter' parameter, the 'For you' category will be opened by default.</p> | Optional<br>(only for LC portfolio <b>AND</b> Standalone Slots Lobby) |

*Response parameters*

| Name    | Description  |
|---------|--|
| gameURL | Link to the game to be open on the Pragmatic Play side. This link will contain special parameters which should remain as is. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/game/start/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=test_player&gameId=vs50aladdin&language=en&platform=WEB&cashierURL=http%3A%2F%2Fdomain.com%2F&lobbyURL=http%3A%2F%2Fdomain.com%2F&hash=438fea0a68a0e9ab49df756c-c20eda8f
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "gameURL": "https://{game_server_domain}/gs2c/openGame.do?tc=SHq6rK8JEUJRKmeAqD3Ceim1Wojtma1MA7xsu4-ciynHFWXosjDjgAUPH1A3FSoAM&styleName=username&lang=en"
}
```

## 4.9 TerminateSession

*Request path: POST /game/session/terminate/*

Using this method Operator can terminate the current player session and kick him out all games.

*Request parameters*

| Name             | Description   | Status   |
|------------------|---|----------|
| secureLogin      | User name for authentication in the Casino Game API service | Required |
| externalPlayerId | Id of the player within the Casino Operator system.         | Required |
| hash             | Hash code of the request.                                   | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/game/session/terminate/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=test_player&hash=405281156fc4cace4d2385a8ead83290
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 4.10 TransferTransactions

*Request path: POST /balance/transfer/transactions*

This method returns transfer transactions (deposits and withdrawals) for all players during the period defined by time point, but not longer than 10 minutes. Data will be returned in CSV format.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service  | Required |
| timepoint   | Time point starting from which data will be transferred. If time point is empty, the new time point will be returned.<br>(Unix epoch time in milliseconds, for example: 1470926696715) | Optional |
| hash        | Hash code of the request.  | Required |

*Response parameters (CSV)*

| Name                  | Description  |
|-----------------------|--|
| externalPlayerId      | Unique identifier of the player within the Casino Operator system  |
| timestamp             | Date and time when the transfer is processed on the Pragmatic Play side.<br>(Unix epoch time in milliseconds, for example: 1470926696715)    |
| externalTransactionId | Unique identifier of the transaction within Casino Operator system.  |
| amount                | Amount transferred in or out of the player's balance, in the player's currency. Can have positive (deposit) or negative (withdrawal) values. |
| currency              | Currency of the player, 3-character ISO 4217 code.   |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/balance/transfer/transactions/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&timepoint=1482510713000&hash=405281156fc4cace4d2385a8ead83290
```

*Example of JSON response:*

```
timepoint=1482510979767
externalPlayerId,timestamp,externalTransactionId,amount,currency
421,1482510741000,1482429190474,100.00,USD 422,1482510742000,1482429190475,-200.00,USD
```

## 4.11 Error codes

Below table contains the error codes that the Pragmatic Play system will return in the response to Balance Transfer API calls.

Only responses with HTTP Status: 200 should be accepted by operator as valid response

Responses with HTTP Status other than 200 **should not be accepted** as valid (recommended actions are the same as for **error: 1, description "Internal error. Try later please."**)

*For each API account, retry frequency for failed "Transfer" or "GetTransferStatus" method requests, should be not more than **one call per minute** and **not longer than 1 hour**. (after 1 hour Error reason should be checked in relevant support channel)*

| Code | Description  | Further action recommendations  |  |
|------|--|---|--|
|      |  | Transfer method   | Other methods  |
| 1    | Internal error. Try later please.  | Options:<br>Transfer call retry<br>After getting valid response:<br>- <i>Transfer success(error code 0 or 8) – no action required</i><br>- <i>Transfer failed –Transfer transaction failed, amount can be returned to player's wallet</i>   | Error reason should be checked in relevant support channel |
|      | Insufficient funds available to complete the transaction.  | GetBalance request, to get actual balance   | -  |
| 100  | "{Error description}. Try later please" (GetTransferStatus method)   | GetTransferStatus method retries<br>After getting valid response:<br>- <i>Transfer success (error code 0) – no action required</i><br>- <i>Transfer is in progress now – retry with frequency and period defined in current section</i><br>- <i>Internal error – retry with frequency and period defined in current section</i> | -  |
| 2    | Incorrect secure LOGIN and secure password combination (will be returned also if the hash code validation is failed) | Verify request values   | Verify request values                                      |
| 6    | Game is not found or is not allowed for your system  | -   | Error cause should be checked in relevant support channel  |
| 7    | One or several input parameters is not set or set incorrectly.   | Verify request values   | Verify request values                                      |
| 8    | Transaction already exists   | No action required  | -  |
| 17   | Player not found   | Verify request values   | Verify request values                                      |
| 21   | Currency code is incorrect or unsupported  | -   | Verify request values                                      |

## V. Games JavaScript API

This section describes Pragmatic Games JS API which can be used by operators to take different events like spin started, ended, entering to bonus game or free spins directly from the game using JavaScript communication. Starting the game launch, Pragmatic games send different events to the topmost window, so they can be caught and used for different purposes on operator side – to attract players' attention, etc.

### 5.1 Game Events Interception

During lifetime, starting the moment when game is loaded into iframe, game sends different events based on user behavior to the topmost window. So that, sent events can be intercepted on operator side and used further.

The example of the code which can intercept these events looks like this:

```
XD.receiveMessage(handler, ["http://", $Host].join(""));
XD.receiveMessage(handler, ["https://", $Host].join(""));
```

Where handler - js custom function for handling the event

XD - the postMessage library

All events are sent in the following format:

```
Object {
  name:<name of the event>
  data:<additional data for this event>
};
```

Example:

```
Object {
  name: "bonusGameStarted"
};
```

## 5.2 Events

Currently all Pragmatic HTML5 games send events described in the table below.

| Event Name                  | Description  | Data           | Video Slots | Bingo | Live games |
|-----------------------------|--|----------------|-------------|-------|------------|
| <b>spinStarted</b>          | Player clicks <i>Spin</i> button and reels started spinning                                  | sender:value * | ✓           |       |            |
| <b>spinEnded</b>            | Reels stopped  | sender:value * | ✓           |       |            |
| <b>resultShown</b>          | Game round result is shown to player and all the animation related to the round is completed | sender:value * | ✓           |       |            |
| <b>gameRoundStarted</b>     | Player clicks <i>Spin</i>  | sender:value * | ✓           |       | ✓          |
| <b>gameRoundEnded</b>       | Game round is finished (it comes before resultShown event)                                   | sender:value * | ✓           |       | ✓          |
| <b>bonusGameStarted</b>     | Bonus game opens for player  | sender:value * | ✓           |       |            |
| <b>bonusGameEnded</b>       | Player played bonus game, saw result and returned to the main game                           | sender:value * | ✓           |       |            |
| <b>freeSpinStarted</b>      | Free spins started for player  | sender:value * | ✓           |       |            |
| <b>freeSpinEnded</b>        | Free spins are over, player saw result of the Free Spins and returned back to the main game  | sender:value * | ✓           |       |            |
| <b>gameLoadingStarted</b>   | Game loading has started   | sender:value * | ✓           |       | ✓          |
| <b>gameLoadingEnded</b>     | Game has finished loading and is available for playing                                       | sender:value * | ✓           |       | ✓          |
| <b>balanceTooLow</b>        | Player no longer has enough balance to spin with current selected bet                        | sender:value * | ✓           | ✓     |            |
| <b>notifyCloseContainer</b> | Game container is closing because of window closure, redirect or refreshing                  | sender:value * | ✓           | ✓     | ✓          |
| <b>gameQuit</b>             | For home/lobby/close/leave   | sender:value * | ✓           |       | ✓          |
| <b>openCashier</b>          | For insufficient funds message/button  | sender:value * | ✓           |       | ✓          |
| <b>homeButton</b>           | For Home Button action in Bingo  | sender:value * |             | ✓     |            |
| <b>RC_SHOWN</b>             | reality check pop-up message is shown  | sender:value * | ✓           | ✓     | ✓          |
| <b>RC_CONTINUE</b>          | for <u>continue</u> button action in RC pop-up   | sender:value * | ✓           | ✓     | ✓          |
| <b>RC_QUIT</b>              | for <u>close</u> button action in RC pop-up  | sender:value * | ✓           | ✓     | ✓          |
| <b>gameReady</b>            | bingo client is initialized and ready for use  | 'gameReady'    |             | ✓     | ✓          |

|                      |  |   |   |   |
|----------------------|--|---|---|---|
| <b>gameActive</b>    | bingo client is reverted to normal mode and player can continue play         | 'gameActive'                              | ✓ | ✓ |
| <b>FRB_STARTED**</b> | Free Spins Bonus Session started in game                                     | sender:value<br>*                         | ✓ |   |
| <b>FRB_ENDED**</b>   | Free Spins Bonus session ended in game                                       | sender:value<br>*                         | ✓ |   |
| <b>bigWinLevel</b>   | Player won big win (the higher winnings amount – the higher level parameter) | params:<br>{ level: int<br>(0,1,2,3...) } | ✓ |   |
| <b>gameChange</b>    | The player changed the game  | sender:value<br>*                         | ✓ |   |

\*-value: identifier of game from which event is sent.

Examples: sender: "vs50aladdin"; sender: 401 – for RNG and Live games client (value=gameld)  
sender: "bingo" – for Bingo game client

\*\* - Events are optional and not available by default. In case Casino Operator needs this event they should ask the Pragmatic Play's Technical Support for additional configuration.

## 5.3 Triggers

Triggers are special JS Postmessages which are sent from parent page to game client, in order to apply needed action

| Name                        | Description  | Data  | RNG | Bingo | Live games |
|-----------------------------|--|---|-----|-------|------------|
| <b>Stop autoplay</b>        | Is sent to stop Auto Play for our games from client side.  | <i>postMessage</i> ('{ <i>"type"</i> : <i>"Tilt"</i> ','*');  | ✓   |       | ✓          |
| <b>Update balance</b>       | Is sent to update balance in cases, where player's balance can be changed outside of game (for example when player deposited or playing in another game in parallel) | <i>postMessage</i> ("updateBalance");<br>or<br><i>postMessage</i> ({ <i>event</i> : "refreshBalance"});   | ✓   |       |            |
| <b>Pause / Resume</b>       | Is sent to pause or resume whole game. While it's paused, player is not able to continue the game  | <i>postMessage</i> ("requestPause");<br><i>postMessage</i> ("requestResume");   | ✓   |       |            |
| <b>Mute / Unmute</b>        | Is sent to turn on or turn off the sound   | <i>postMessage</i> ({ <i>event</i> : "setVolume",<br><i>params</i> :{ <i>muted</i> : true}});<br><i>postMessage</i> ({ <i>event</i> : "setVolume",<br><i>params</i> :{ <i>muted</i> : false}}); | ✓   |       |            |
| <b>Stop game (Bingo)</b>    | Is sent to inactivate Bingo game client for player (for example in reality check action)   | <i>postMessage</i> ('stopGame','*');  |     | ✓     |            |
| <b>Restart game (Bingo)</b> | Is sent to re-activate Bingo game client which was stopped before  | <i>postMessage</i> ('restartGame','*');   |     | ✓     |            |

## VI. Variable Free Spins API

**Free Rounds Bonus (FRB)** has been renamed to **Free Spins Bonus (FSB)**.

Note that the change only affects the method name and has no effect on the parameters, content, or API methods as a whole.

Free Spins Bonus (FSB) (**previously Free Rounds Bonus (FRB)**) allows the player to play a specified number of free spins in a game. Free Spins created via Variable Free Spins API may be configured to be played with a certain bet value specified for each game and currency. During Free Spins game play, bets are not deducted from the player's balance, but all wins are collected for the Free Spins Bonus in the Pragmatic Play's system.

After all free spins are played the Pragmatic Play system sends a bonusWin API call to Operator server to add money to the player's balance. Please note that not all games support FSB.

Free Spins can be awarded to players registered within the Pragmatic Play system using API.

Free Spins Bonus HTTP service is a simple API for game Operator to manage Free Spins. API is an HTTP listener, which listens POST requests coming to an URL with the request mappings below.

If the Free Spins API is used to create the FSB, then implementing cancel via the API (method 6.4 Cancel Free Spins) is also mandatory.

All responses should be in JSON format.

URL of the FSB HTTP service will be provided by Pragmatic Play for the production and test environments and looks like: `https://{API service domain}/IntegrationService/v3/http/FreeRoundsBonusAPI/v2/`

Free Spins HTTP service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

The **bonusCode** is unique and can be used only one time for same playerId. Please make sure you've integrated the FSB in the proper way and won't reuse/award same **bonusCode** values in your logic. In case Casino Operator needs to make the **bonusCode reusable** they should ask the Pragmatic Play's Technical Support for additional configuration.

### 6.1 Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them (if the value is not null or empty) in key1=value1&key2=value2.
3. Append secret key, e.g.: key1=value1&key2=value2SECRET.
4. Calculate the hash by using MD5.
5. Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.

## 6.2 Data types

| Name  | Type        | Description   |
|---|-------------|---|
| playerId                                      | String(100) | Id of the player within the Operator system. Examples: 1000, 2644987.   |
| currency                                      | String      | Player's ISO 4217 currency code. Examples: 'EUR' or 'USD'.  |
| gameId  | String      | Unique identifier of the game.  |
| rounds  | Integer     | Number of free spins  |
| bonusCode                                     | String      | Bonus unique identifier within the Operator system. <b>Max length of this parameter depends on <u>requestId</u>. The sum of their length has to be 252 symbols or less.</b>   |
| requestId                                     | String      | Unique identifier of FSB credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player. <b>Max length of this parameter depends on <u>bonusCode</u>. The sum of their length has to be 252 symbols or less.</b> |
| expirationDate,<br>startDate,<br>validityDate | Long        | Date and time when the bonus will start, expire or until it is valid - timestamp in seconds. <i>(Unix epoch time in seconds, for example : 1470926605)</i>  |
| periodOfTime                                  | number      | Awarded bonus time <u>in seconds</u>  |
| error   | Integer     | Error code.   |

## 6.3 Create Free Spins

**Request path:** `POST /FreeRoundsBonusAPI/v2/bonus/create/`

Using this method Operator can create a new Free Spins Bonus with the Pragmatic Play's games.

In case of a network error Operator can send a repeated Create Free Spins requests. The Pragmatic Play system will not create new FS bonus if there is an active FS bonus with the same bonus code.

**Note:**

In cases where Operator creates Free Spins Bonus with **periodOfTime** and more than one game in **gameList**, player will be able to continue FSB only in game, which FSB was started in.

In cases where the operator creates a FSB with the **frType=F** parameter, only one game can be added to the **gameList**.

**Note:**

To specify Expiration and Validity for FSB, either **expirationDate** and **validityDate** (as timestamps in seconds) OR **expirationPeriod** and **validityPeriod** (as {N} minutes) parameters can be specified. If **expirationPeriod** is specified, **validityPeriod** must be specified as well.

**Note:**

Expiration date is mandatory. It should be sent as timestamp in seconds, and the bonus validity period must not be longer than 30 days.

1. Total bet for each round is calculated as bet-per-line \* number-of-lines.

### Request parameters

| Name             | Description  | Status  |
|------------------|--|---|
| secureLogin      | User name for authentication in the Casino Game API service  | Required  |
| bonusCode        | Bonus id within the Casino Operator's system. Should be unique within the brand.   | Required  |
| startDate        | Date and time when free spins bonus will start.<br><i>*UNIX time in sec</i>  | Required  |
| expirationDate   | Date and time when the free spins will expire.<br><i>*UNIX time in sec</i>   | Optional<br>Should NOT be used when the <b>expirationPeriod</b> is specified. |
| validityDate     | Date and time when the bonus gets invalid and is unavailable for the player. Doesn't work when frType is passed.<br><i>*UNIX time in sec</i> | Optional<br>Should be used if <b>expirationDate</b> is specified.             |
| expirationPeriod | Number of minutes (after FSB is created to a player), after which free spins will expire.  | Optional<br>Should NOT be used when the <b>expirationDate</b> is specified.   |
| validityPeriod   | Number of minutes (after FSB is created to a player), after which the bonuses will become unavailable. Doesn't work when frType is passed.   | Optional<br>Should be used if <b>expirationPeriod</b> is specified.           |

|              |   |   |
|--------------|---|---|
| rounds       | Number of free game rounds awarded.   | Optional. Should not be used when <b>periodOfTime</b> or <b>frType</b> parameter is specified |
| periodOfTime | Awarded bonus time <u>in seconds</u> (please see note)  | Optional. Should not be used when <b>rounds</b> or <b>frType</b> parameter is specified       |
| frType       | Type of the Free Spins Bonus that the player will be awarded.<br>Available values are:<br>F – Instant bonus rounds (triggering predefined in-game feature)  | Optional. Should not be used when <b>rounds</b> or <b>periodOfTime</b> parameter is specified |
| hash         | Hash code of the request.   | Required  |
| gameList     | List of the games associated with the bonus, with bet per line values for each currency. See below VariableFRGame type description of the objects in the list.<br><i>This data must be sent as a JSON in the body of the request.</i> | Required  |

*Type: VariableFRGame*

| Name      | Description  |
|-----------|--|
| gameId    | Id of the game associated with the free spins bonus.                 |
| betValues | List of <u>bets per line</u> or <u>total bets</u> with the currency. |

*Type: VariableFRBetValue*

| Name       | Description  | Status  |
|------------|--|---|
| currency   | Currency code.   | Required  |
| betPerLine | Value of bet per line in the specified currency, which will be applied during free spins | Should not be used when totalBet option is used   |
| totalBet   | Value of total bet in the specified currency, which will be applied during free spins    | Should not be used when betPerLine option is used |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/bonus/create?bonusCode=Bonus_Code&expirationDate=1540563996&rounds=27&secureLogin=Secure_Login&startDate=1537971996&validityDate=1543242396&hash=464e9816b531cc78bbdcffc81dd44e18 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

```
{
  "gameList": [
    {
```

```
    "gameId": "vs25a",  
    "betValues": [  
      {"betPerLine": 0.05, "currency": "USD"},  
      {"betPerLine": 0.10, "currency": "EUR"},  
      {"betPerLine": 0.50, "currency": "CNY"}  
    ],  
  },  
  {  
    "gameId": "vs9c",  
    "betValues": [  
      {"betPerLine": 0.15, "currency": "USD"},  
      {"betPerLine": 0.30, "currency": "EUR"},  
      {"betPerLine": 1.50, "currency": "CNY"}  
    ]  
  }  
]  
}
```

*Example of JSON response:*

```
{  
  "error": "0",  
  "description": ""  
}
```

## 6.4 Cancel Free Spins

*Request path: POST /FreeRoundsBonusAPI/v2/bonus/cancel/*

Using this method Operator can cancel an existing Free Spins Bonus in the Pragmatic Play system. In addition to campaign cancellation, all related players' bonuses will also be cancelled according to the corresponding logic.

Cancellation logic for bonuses depends on the bonus status.  
All not-started bonuses will be cancelled.

If the bonus was started but not finished:

- for free spins and countdown fs, already played spins and awarded wins remain, but the rest of the spins and free seconds will be cancelled,
- single unfinished rounds, such as instant bonuses or free spin rounds, will not be cancelled, so the player can finish them and receive wins later.

Finished, cancelled, or expired bonuses will not be affected (the player's win and bonus status remain).

### *Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service             | Required |
| bonusCode   | Bonus id within the Operator system. Should be unique within the brand. | Required |
| hash        | Hash code of the request.   | Required |

### *Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

### *Example of HTTP request:*

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/bonus/cancel HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&bonusCode=421&hash=39554fed4f41132eb8fe75e9a7ba3df6
```

### *Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 6.5 GetPlayersFSB

*Request path: POST /FreeRoundsBonusAPI/getPlayersFRB/*

Using this method Casino Operator system can get from the Pragmatic Play system all Free Spins Bonus that are awarded to the particular player.

### *Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service | Required |
| playerId    | Id of the player within the Operator system.                | Required |
| hash        | Hash code of the request.                                   | Required |

### *Response parameters*

| Name        | Description  |
|-------------|--|
| bonuses     | List of information about all active FSB that were awarded to the player. See below FSB type description of the objects in the list. |
| error       | Error code.  |
| description | Description of the error for troubleshooting.  |

### *Type: FRB*

| Name           | Description   |
|----------------|---|
| currency       | Currency of the player.   |
| gameIDList     | List of symbolic unique identifiers of the game that the FS is awarded for, comma separated. Example: vs25a, vs9c, vs20s. |
| rounds         | Number of free game rounds awarded.   |
| roundsPlayed   | Number of rounds already played.  |
| bonusCode      | Bonus id within the Operator system. Should be unique within the brand.   |
| expirationDate | Date and time when the free spins will expire.  |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/getPlayersFRB HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&playerId=421&hash=b623382e6dd3219d63b7ed1979408856
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "bonuses": [
    {
      "currency": "USD",
      "gameIDList": "vs20b1",
      "rounds": 10,
      "roundsPlayed": 0,
      "bonusCode": "421_frb1",
      "expirationDate": "2016-12-24 00:00",
    },
    {
      "currency": "USD",
      "gameIDList": "vs20b1",
      "rounds": 10,

    }
  ]
}
```

## 6.6 Add players

**Request path:** *POST /FreeRoundsBonusAPI/v2/players/add/*

Using this method Operator can add players to the existing Free Spins Bonus. Free spins bonus will be available to both existing and future players, whether they are already registered with PP system or not yet.

### Request parameters

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service  | Required |
| bonusCode   | Bonus id within the Operator system. Should be unique within the brand.  | Required |
| playerList  | List of player id to add to the existing Free Spins Bonus, comma separated.<br>This data must be sent as a JSON in the body of the request.<br><i>*The maximum player list size value is 5000 in a batch.</i>  | Required |
| requestId   | Unique identifier of FSB credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| hash        | Hash code of the request.  | Required |

### Response parameters

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/players/add/?secureLogin=ext_test1&bonus-
Code=421&hash=908ea6c3335602d153e490871b376c77 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json

{
  "playerList": ["449986","450013","450509","437070"]
}
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK"
}
```

## 6.7 Add player

*Request path: POST FreeRoundsBonusAPI/v2/bonus/player/add*

Using this method Operator can add one player to the existing Free Spins Bonus and override such parameters as periodOfTime, rounds, expirationDate or validityDate. Free spins bonus will be available to both existing and future players, whether they are already registered with PP system or not yet.

### Request parameters

| Name                  | Description  | Status   |
|-----------------------|--|--|
| secureLogin           | User name for authentication in the Casino Game API service  | Required   |
| bonusCode             | Bonus id within the Operator system. Should be unique within the brand.  | Required   |
| playerId              | Player ID in Casino Operator's system.   | Required   |
| config.expirationDate | Date and time when the bonus will expire (in seconds).   | Optional   |
| config.validityDate   | Date and time until the bonus will be valid (in seconds).  | Optional   |
| config.rounds         | The number of rounds for number-of-spins FSB.  | Optional.<br><br>Should not be used when <b>periodOfTime</b> parameter is specified. |
| config.periodOfTime   | The number of seconds for time-limited FSB.  | Optional.<br><br>Should not be used when <b>rounds</b> parameter is specified.       |
| requestId             | Unique identifier of FSB credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional   |
| hash                  | Hash code of the request.  | Required   |

### Response parameters

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/bonus/player/add?secureLogin=username&bonus-Code=422_frb&requestId=req125&playerId=123456&hash=26a4f62a8cde581ed5645cbd115f28b0 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

For number-of-spins FSB:

```
{
  "config": {
    "expirationDate": 1470926605,
```

```
    "validityDate": 1470926605,  
    "rounds": 1234  
  }  
}
```

For time-limited FSB:

```
{  
  "config": {  
    "expirationDate": 1470926605,  
    "validityDate": 1470926605,  
    "periodOfTime": 1234  
  }  
}
```

For a player without a specific configuration:

```
{  
  "config": {  
  }  
}
```

*Example of JSON response:*

```
{  
  "error": "0",  
  "description": "OK"  
}
```

## 6.8 Remove players

**Request path:** *POST /FreeRoundsBonusAPI/v2/players/remove/*

Using this method Operator can remove players from the existing Free Spins Bonus and cancel free spins awarded to them.

Cancellation logic for bonuses depends on the bonus status.

All not-started bonuses will be cancelled.

If the bonus was started but not finished:

- for free spins and countdown fs, already played spins and awarded wins remain, but the rest of the spins and free seconds will be cancelled,
- single unfinished rounds, such as instant bonuses or free spin rounds, will not be cancelled, so the player can finish them and receive wins later.

Finished, cancelled, or expired bonuses will not be affected (the player's win and bonus status remain).

### Request parameters

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service  | Required |
| bonusCode   | Bonus id within the Operator system. Should be unique within the brand.  | Required |
| playerList  | List of player id to remove from the existing Free Spins Bonus, comma separated.   | Required |
| requestID   | Unique identifier of FSB credit request (for specific player) which was sent during adding of player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| hash        | Hash code of the request.  | Required |

### Response parameters

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/players/remove HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
Cache-Control: no-cache

secureLogin=username&bonusCode=421&hash=39554fed4f41132eb8fe75e9a7ba3df6

{
  "playerList": ["449986","450013","450509","437070"]
}
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK"
}
```

## 6.9 Create Player Free Spins

*Request path: POST /FreeRoundsBonusAPI/v2/bonus/player/create/*

Using this method Operator can create a new Free Spins Bonus with the Pragmatic Play's games for player

In case of a network error Operator can send a repeated Create Free Spins requests. The Pragmatic Play system will not create new RF bonus if there is an active FS bonus with the same bonus code.

**Note:**

In cases where Operator creates Free Spins Bonus with **periodOfTime** and more than one game in **gameList**, player will be able to continue FSB only in game, which FSB was started in.

In cases where the operator creates a FSB with the **frType=F** parameter, only one game can be added to the gameList.

**Note:**

- Expiration date is mandatory. It should be sent as timestamp in seconds, and the bonus validity period must not be longer than 30 days.
- Total bet for each round is calculated as bet-per-line \* number-of-lines.

### Request parameters

| Name           | Description   | Status  |
|----------------|---|---|
| secureLogin    | User name for authentication in the Casino Game API service   | Required  |
| bonusCode      | Bonus id within the Casino Operator's system. Should be unique within the brand.  | Required  |
| startDate      | Date and time when free spins bonus will start.<br><i>*UNIX time in sec</i>   | Required  |
| expirationDate | Date and time when the free spins will expire.<br><i>*UNIX time in sec</i>  | Required  |
| validityDate   | Date and time when the bonus gets invalid and is unavailable for the player. Doesn't work when frType is passed.<br><i>*UNIX time in sec</i>            | Optional  |
| rounds         | Number of free game rounds awarded.   | Optional. Should not be used when <b>periodOfTime</b> or <b>frType</b> parameter is specified |
| periodOfTime   | Period of bonus time <u>in seconds</u> (please see note)  | Optional. Should not be used when <b>rounds</b> or <b>frType</b> parameter is specified       |
| frType         | Type of the Free Spins Bonus that the player will be awarded. Available values are:<br>F – Instant bonus rounds (triggering predefined in-game feature) | Optional. Should not be used when <b>rounds</b> or <b>periodOfTime</b> parameter is specified |

|           |  |          |
|-----------|--|----------|
| playerId  | Player ID in Casino Operator's system.   | Required |
| currency  | Player currency.   | Required |
| hash      | Hash code of the request.  | Required |
| gameList  | List of the games associated with the bonus, with bet per line values for each currency. See below VariableFRGame type description of the objects in the list.<br><i>This data must be sent as a JSON in the body of the request.</i>  | Required |
| requestId | Unique identifier of FSB credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |

*Type: VariableFRGame*

| Name      | Description  |
|-----------|--|
| gameId    | Id of the game associated with the free spins bonus.                 |
| betValues | List of <u>bets per line</u> or <u>total bets</u> with the currency. |

*Type: VariableFRBetValue*

| Name       | Description  | Status   |
|------------|--|--|
| currency   | Currency code.   | Required   |
| betPerLine | Value of bet per line in the specified currency, which will be applied during free spins | Should not be used when <b>totalBet</b> option is used   |
| totalBet   | Value of total bet in the specified currency, which will be applied during free spins    | Should not be used when <b>betPerLine</b> option is used |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/FreeRoundsBonusAPI/v2/bonus/player/create/?bonusCode=some_bomnus_code123&expirationDate=1597921169&rounds=27&secureLogin=some_secureLogin&startDate=1597835415&currency=USD&playerId=392&hash=2b7e7dc8ef0ecd2dcd9c89b9f79fbae1 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json

{
  "gameList": [
    {
      "gameId": "vs25a",
      "betValues": [

},
{
    "gameId": "vs9c",
    "betValues": [
        {"betPerLine": 0.15, "currency": "USD"},
        {"betPerLine": 0.30, "currency": "EUR"},
        {"betPerLine": 1.50, "currency": "CNY"}
    ]
}
]}
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": ""
}
```

## 6.10 Get Bet Scales

*Request path: POST /IntegrationService/v3/http/CasinoGameAPI/getBetScales*

Using this method Operator can receive available **bet per line** and **total bet scale** values for games per currency

**Important:** To avoid excessive traffic and load on both PragmaticPlay and Operator system, it is recommended to send in request games and currencies list which are needed for Free Spins Bonus creation. This API method is designed only for the games that support FSB.

### Request parameters

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service  | Required |
| gameIDs     | List of game IDs, in cases where it is sent, bet scales will be returned only for sent game list         | Optional |
| currencies  | List of currencies, in cases where it is sent, bet scales will be returned only for sent currencies list | Optional |
| hash        | Hash code of the request.  | Required |

### Response parameters

| Name        | Description  |
|-------------|--|
| error       | Error code.  |
| description | Description of the error for troubleshooting.  |
| gameList    | List of the games, with relevant game and bet scale list. See below betScaleList type description of the objects in the list.<br><i>This data must be sent as a JSON in the body of the request.</i> |

### Type: betScaleList

| Name             | Description                                      |
|------------------|--|
| currency         | Symbolic code of currency. Example: "USD", "EUR" |
| betPerLineScales | List of possible bets per line                   |
| totalBetScales   | List of possible total bets                      |

### Example of HTTP request:

```
POST /IntegrationService/v3/http/CasinoGameAPI/getBetScales/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache
```

```
secureLogin=username&hash=d249eef6f9264213586f3e94b7daba40&gameIDs=vs20cd&currencies=USD,EUR
```

*Example of JSON response:*

```
{
  "description": "OK",
  "error": "0",
  "gameList": [
    {
      "betScaleList": [
        {
          "betPerLineScales": [
            1.0,
            2.0,
            3.0,
            4.0,
            5.0
          ],
          "currency": "USD",
          "totalBetScales": [
            20.0,
            40.0,
            60.0,
            80.0,
            100.0
          ]
        },
        {
          "betPerLineScales": [
            1.0,
            2.0,
            3.0,
            4.0,
            5.0
          ],
          "currency": "EUR",
          "totalBetScales": [
            20.0,
            40.0,
            60.0,
            80.0,
            100.0
          ]
        }
      ],
      "gameID": "vs20cd"
    }
  ]
}
```

## 6.11 Error codes

The table below contains the error codes that the Pragmatic Play system will return in the response to Variable Free Spins API calls.

| Code | Description  |
|------|--|
| 0    | Request was successfully processed.  |
| 1    | Authentication failed. Incorrect secure login and secure password combination.   |
| 2    | Validation failed. Empty mandatory field '{field name}'.   |
| 3    | Game(s) are not supported: {list of the game id}.  |
| 4    | Game(s) do not support Free round bonus: {list of the game id}   |
| 5    | Bonus code already exists.   |
| 6    | The requested Free Round bonus is not found in the system.   |
| 7    | Free round bonus is canceled.  |
| 8    | Free round bonus is closed or started to play.   |
| 9    | Currency code '{ISO code}' is incorrect or unsupported.  |
| 10   | Player does not have active Free round bonuses.  |
| 11   | Free round bonus cannot be created. Expiration date limit (30 days) has been exceeded.   |
| 12   | Free round bonus cannot be created. Expiration date is in the past.  |
| 14   | Bonus code already exists with another parameters.   |
| 19   | Free round bonus is expired.   |
| 37   | Bad request: periodOfTime and rounds cannot be used in same time   |
| 37#1 | Bad request: Either dates (expirationDate and validityDate) or periods (expirationPeriod and validityPeriod) should be specified.      |
| 37#2 | Bad request: If expirationPeriod is specified validityPeriod must be specified as well.  |
| 37#3 | Bad request: Expiration period limit ({X} days) has been exceeded.   |
| 37#4 | Bad request: The difference between Validity period and Expiration period should not exceed the limit ({Y} days).                      |
| 37#5 | Bad request: Expiration period exceeds the Validity period.  |
| 37#6 | Bad request: playerList' size should be less or equals to 5000   |
| 38   | Bet per line less than 0.01 after total bet conversion (totalBet / number of slot lines)   |
| 39   | Bet per line less than 0.01  |
| 44   | Package is not found or cancelled.   |
| 45   | Package is expired.  |
| 46   | Player already registered in package with same bonusCode.  |
| 1000 | Internal server error. Pragmatic Play will return this error code if their system has internal problem and cannot process the request. |

## VII. Game History API

History API provides game rounds played by the player, with their details. Operator can get a list of games played, game rounds that the player has played during a particular day and hour, and the screen of the game at the end of the game round.

History HTTP service is a simple API for game Operator to get player's game history. API is an HTTP listener, which listens POST requests coming to an URL with the request mappings below.

All responses should be in JSON format.

URL of the history HTTP service will be provided by Pragmatic Play for the production and test environments and looks like:

*https://{API service domain}/IntegrationService/v3/http/HistoryAPI/*

History HTTP service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

### **IMPORTANT!**

For RNG games portfolio, all Game History API methods are supported

For LC, VSB portfolio only 7.7 OpenHistoryExtended and 7.6 GetRoundStatus methods are supported

### 7.1 Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them (if the value is not null or empty) in key1=value1&key2=value2.
3. Append secret key, e.g.: key1=value1&key2=value2SECRET.
4. Calculate the hash by using MD5.
5. Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.

## 7.2 Data types

| Name         | Type            | Description   |
|--------------|-----------------|---|
| secureLogin  | String (32)     | User name for authentication in the Casino Game API service. Should be provided by the Pragmatic Play.  |
| playerId     | String(100)     | Id of the player within the Operator system. Examples: 1000, 2644987.   |
| gameId       | String (32)     | Symbolic unique identifier of the game within the Pragmatic Play system. <i>Example: vs25queenofgold, vs50aladdin, cs5triple8gold, bjma, rla, vpa</i><br><br>Casino Operator can get the list of all available games by a call of GetCasinoGames method of <i>Integration API</i> . |
| language     | String(2)       | Language code in ISO 639-1 standard (e.g. en, fr, it).  |
| roundId      | Long            | Identification for the player's round.  |
| currency     | String(3)       | Player's ISO 4217 currency code. Examples: 'EUR' or 'USD'.  |
| cash         | Decimal (10, 2) | Player's real balance. Example: '100.00'.   |
| bonus        | Decimal (10, 2) | Player's promo balance. Example: '100.00'.  |
| betAmount    | Decimal (10, 2) | Amount of the bet. Example: '1.00'.   |
| winAmount    | Decimal (10, 2) | Amount of the win. Example: '5.25'.   |
| roundDetails | String(4000)    | Additional information about the current game round, such as "Free spin", "Bonus", etc.   |
| datePlayed   | DateTime        | Date when the round was played  |
| timeZone     | TimeZone        | Time zone of the user.<br><i>Example: GMT, GMT+8, GMT+04:00</i>   |
| error        | Integer         | Error code.   |

## 7.3 GetPlayedGames

*Request path: POST /GetPlayedGames/*

Using this method Casino Operator can get a list of the games played by the player during the day.

*Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service.    | Required |
| playerId    | Id of the player within the Casino Operator system.             | Required |
| datePlayed  | Date, based on the time zone of the user.                       | Required |
| timeZone    | Time zone of the user.<br><i>Example: GMT, GMT+8, GMT+04:00</i> | Required |
| hash        | Hash code of the request.                                       | Required |

*Response parameters*

| Name  | Description   |
|-------|---|
| games | List of games played. See below GamePlayed type description of the objects in the list. |

*Type: GamePlayed*

| Name        | Description                                   |
|-------------|---|
| gameId      | Symbolic unique identifier of the game.       |
| gameName    | Name of the game.                             |
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/HistoryAPI/GetPlayedGames/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&playerId=421&datePlayed=2016-12-23&timeZone=GMT+00:00&hash=980d06d3361f1e21a2f1550c6806ef52
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "games": [
    {
      "gameId": "vs30catz_jp",
      "gameName": "The Catfather Part II"
    },
    {
      "gameId": "vs50aladdin",
      "gameName": "3 Genie Wishes"
    }
  ]
}
```

## 7.4 GetGameRounds

*Request path: POST /GetGameRounds/*

Using this method Casino Operator can get a list of the game rounds played by the player during the certain day and (optionally) the **specific hour**.

**Important:** In case the **hour** parameter is absent in the request, it will default to 0.

### Request parameters

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service.           | Required |
| playerId    | Id of the player within the Casino Operator system.                    | Required |
| datePlayed  | Date when the game rounds were played, based on time zone of the user. | Required |
| timeZone    | Time zone of the user.<br><i>Example: GMT, GMT+8, GMT+04:00</i>        | Required |
| gameId      | Symbolic unique identifier of the game.                                | Required |
| hour        | Ordinal number of time in a day.<br><i>Example: 0,1,2,...,22,23</i>    | Optional |
| hash        | Hash code of the request.  | Required |

### Response parameters

| Name        | Description  |
|-------------|--|
| rounds      | List of game rounds played. See below GameRound type description of the objects in the list. |
| error       | Error code.  |
| description | Description of the error for troubleshooting.  |

### Type: GameRound

| Name         | Description   |
|--------------|---|
| dateTime     | Date and time when the round was played, based on time zone of the user.<br>The value is returned in Pragmatic Play's server time zone (UTC/GMT+0). |
| gameId       | Symbolic unique identifier of the game.   |
| gameName     | Name of the game.   |
| roundId      | Unique identifier of the game round.  |
| currency     | Player's currency.  |
| betAmount    | Bet amount.   |
| winAmount    | Win amount.   |
| balance      | Player's balance at the end of the round.   |
| roundDetails | Additional information about the game round, such as "Free spin", "Bonus", etc.   |
| memberId     | Unique id for player on the Pragmatic Play side.  |
| casinoID     | Unique id for brand on the Pragmatic Play side.   |

|             |   |
|-------------|---|
| detailsUrl  | This parameter is not currently used and should be ignored by operators   |
| roundStatus | Status of the game round. May have the following values: <ul style="list-style-type: none"> <li>○ In progress – game round was started but not finished yet by the player</li> <li>○ Completed – game round has been completed by the player</li> </ul> |

**Example of HTTP request:**

```
POST /IntegrationService/v3/http/HistoryAPI/GetGameRounds/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&playerId=421&datePlayed=2016-12-23&timeZone=GMT+00:00&gameId=vs50aladdin&hour=10&hash=0179f75a37274337f9aefe2c3108db0f
```

**Example of JSON response:**

```
{
  "error": "0",
  "description": "OK",
  "rounds": [
    {
      "dateTime": "2016-12-23 05:50:35.0",
      "gameId": "vs50aladdin",
      "gameName": "3 Genie Wishes",
      "roundId": "5108924498",
      "currency": "USD",
      "betAmount": "0.0",
      "winAmount": "0.05",
      "balance": "99711.59",
      "roundDetails": "Free spin",
      "memberId": 6638030,
      "detailsUrl": "pragmaticplay"
    }, ... ,
    {
      "dateTime": "2016-12-23 05:54:28.0",
      "gameId": "vs50aladdin",
      "gameName": "3 Genie Wishes",
      "roundId": "5108946371",
      "currency": "USD",
      "betAmount": "2.5",
      "winAmount": "0.0",
      "balance": "99710.04",
      "roundDetails": null,
      "memberId": 6638030,
      "detailsUrl": "pragmaticplay"
    }
  ]
}
```

## 7.5 OpenHistory

*Request path: POST /OpenHistory/*

Using this method Casino Operator can get a link to the page with the game details at the end of the round. The method returns URL that contains round id and a one-time password that the game server will use for validation of the request, for the security reason.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service. | Required |
| playerId    | Identifier of the player within the Casino Operator system.  | Required |
| roundId     | Unique identifier of the game round.                         | Required |
| hash        | Hash code of the request.                                    | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| url         | URL for opening the game screen page.         |
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/HistoryAPI/OpenHistory/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&playerId=421&roundId=5108924498&hash=361527d01b040fd0c5fb68dcc204b707
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "url": "https://{game_server_domain}/gs2c/gameHistoryDetailForApi.do?otp=9KngwmdYVw6YLViPVIjU9eEMFs-1z1ALnwt0ZygNWTMB7SqAApl8ERLysn7Xp26p0&playSessionId=5108924498"
}
```

## 7.6 GetRoundStatus

*Request path: POST /GetRoundStatus/*

Method returns the current status of a particular game round. Using this method Casino Operator can check game rounds recorded on their side and cancel open bets returning money to the player's balance.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service.   | Required |
| roundId     | Id of the game round.  | Required |
| gameId      | Id of the game.  | Required |
| options     | List of settings (String). By including it, operator can get additional information about round. Possible values are: <ul style="list-style-type: none"> <li>partialWinStatus</li> </ul> | Optional |
| hash        | Hash code of the request.  | Required |

*Response parameters*

| Name        | Description   |
|-------------|---|
| roundId     | Id of the game round.   |
| betAmount   | Amount of the bet.  |
| winAmount   | Amount of the winnings.   |
| roundStatus | Status of the game round. May have the following values: <ul style="list-style-type: none"> <li>In progress – game round was started but not finished yet by the player</li> <li>Completed – game round has been completed by the player</li> <li>Canceled – game round has been closed automatically by the game round finalization process</li> <li>CompleteInProcess – game round is marked as Completed in the db; BetResult or EndRound requests is in asynchronous transaction queue and the system tries to send it to Operator</li> <li>CancelInProcess – game round is marked as Canceled in the db; Refund is in asynchronous queue and being sent to Operator.</li> <li>"Partial win" – status for rounds which were finalized by system with partial winning (status will be sent in case when operator included partialWinStatus in <u>options</u> request parameter)</li> </ul> |
| error       | Error code.   |
| description | Description of the error for troubleshooting.   |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/HistoryAPI/GetRoundStatus/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&roundId=5108924498&gameId=vs50aladdin&hash=8567449f06333293030e8f80ec89d3fa
```

*Example of JSON response:*

```
{  
  "description": "OK",  
  "roundId": 5108924498,  
  "betAmount": "0.0",  
  "winAmount": "0.0",  
  "roundStatus": "Canceled"  
}
```

## 7.7 OpenHistoryExtended

*Request path: POST /OpenHistoryExtended/*

Using this method Casino Operator can obtain detailed information about played game round, including free spin sessions.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service. | Required |
| playerId    | Id of the player within the Operator system.                 | Required |
| gameId      | Id of the game.  | Required |
| roundId     | Unique identifier of the game round.                         | Required |
| language    | Language of report page                                      | Optional |
| hash        | Hash code of the request.                                    | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| url         | Report page URL.                              |
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/HistoryAPI/OpenHistoryExtended/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&playerId=123123&gameId=vs7monkeys&roundId=111222&hash=5fd31717ba4-
da9e78ac19730212925c2
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
  "url": "https://{game server domain}/gs2c/parentRoundHistoryDetails.do?
playSessionId=111222&stylename=username&hash=9cf3e7442c8ea5e95c22d123500ad56e"
}
```

## 7.8 Error codes

The table below contains the error codes that the Pragmatic Play system will return in the response to Game History API calls.

| Code | Description  |
|------|--|
| 0    | Request was successfully processed.  |
| 1    | Authentication failed. Incorrect secure login and secure password combination.   |
| 2    | Request validation failed. Type mismatch for value.  |
| 4    | Round not found. The requested roundId is not found in the system.   |
| 1000 | Internal server error. Pragmatic Play will return this error code if their system has internal problem and cannot process the request. |

## VIII. Data feeds and reports

Data feeds let Casino Operator to download information about in-game money transactions for all game rounds played and jackpot winnings.

In order to receive DataFeeds data for casino, Operator should follow the flow below:

1. Call /environments API method with relevant secureLogin identifier for casino
2. In response PragmaticPlay will return a list of environment and direct API domains (single or multiple environment domains can be returned)
3. Operator should call DataFeeds API method from each Environment, using the relevant API domain
4. In case of multiple domains are returned in Environment API response, Operator should aggregate DataFeeds received from different environments, on their side

Data of the feeds related to large number of records (like transactions) will be requested using time point and sent to the Operator in CSV format.

*For each API account, frequency of any particular "Data feeds and reports" method requests, should be not more than one call per minute.*

*Also, the data can be extracted no later than the last month.*

*Any "Data feeds and reports" method should be requested only with dataType parameter value, which is available for Operator. Available dataType values can be received from 2.1 2.1 GetCasinoGames method*

### Time points

Time point is a timestamp starting from the server time when data is requested for the first time. If the request is sent without a time point, the system returns a time point, which should be sent with the next request.

Whenever a request with the time point is sent, data from the moment of timepoint to the current moment will be transferred, along with the new time point. This new time point should be used for the next request, and so on.

Using such a mechanism, no data will be lost. If clients haven't received response from the Pragmatic Play with the new time point, they will be able to re-send the request with the same time point, until requested data is received.

Data can be loaded by small portions for periods of time not longer than 10 minutes.

### Using timepoints for past periods

If Operator needs to get data for a longer period they can send a number of subsequent requests setting up a starting timepoint and then using timepoints that the Pragmatic Play system returns in the response.

For example, if Operator needs to get data for the last N minutes, they can calculate the start date and time of the period as  $Start = ("now" - N \text{ minutes})$ , convert it into timestamp and send request to the Transactions API using this timestamp as a time point. Server will return data for 10 minutes starting from the timestamp sent in the request, along with the new time point. Using timepoints returned by the server and sending requests one after another Operator can get as many portions of data as they need, to download data that are already in the past.

## Data Feed URL

URL of the data feeds service will be provided by Pragmatic Play for the production and test environments and looks like:

*https://{API service domain}/IntegrationService/v3/DataFeeds/transactions/  
https://{API service domain}/IntegrationService/v3/DataFeeds/failedtransactions/  
https://{API service domain}/IntegrationService/v3/JackpotFeeds/jackpots/*

And for **Bingo** it has to look like this:

*https://{Bingo API service domain}/BingoReports/DataFeeds/gamerounds/  
https://{Bingo API service domain}/BingoReports/JackpotFeeds/jackpots/*

Data feeds service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

## Data formats

Data will be returned in CSV or JSON format. For more details please see the chapter where the data feed is described.

All successful server responses in CSV format will contain a new time point that should be sent then by the client to the server in the next request. Format of the server response is as follows:

```
#timepoint = {server time in ms}  
{Data in standard csv format}
```

Client should get the first line from the response, parse it and save the time point somewhere for the next request. The rest of the response should be parsed as normal CSV stream.

## Data types

| Name            | Type         | Description  |
|-----------------|--------------|--|
| login           | String(30)   | API user name (secureLogin value) for authentication in the Pragmatic Play API.  |
| password        | String(30)   | API password (secret key value) for authentication in the Pragmatic Play API.  |
| timepoint       | Long         | Time point   |
| dataType        | String(3)    | Type of portfolio, indicates which portfolio Data Feeds should be returned<br>Available options:<br>RNG - Main portfolio games (video slots, classic slots etc.)<br>LC - Live Casino portfolio<br>VSB - Virtual sports betting portfolio<br>BNG – Bingo portfolio (should be used for relevant API context path)<br><b>Important!</b><br><u>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</u><br><u>When there is no dataType in request, will be returned Data Feeds for RNG only</u> |
| playerID        | Number(15)   | Player unique identifier within Pragmatic Play system.   |
| extPlayerID     | String(100)  | Player unique identifier within Casino Operator system.  |
| gameID          | String(20)   | Symbolic unique identifier of the game provided by Pragmatic Play.   |
| playSessionID   | Long         | Id of the player's session for particular game (unique number of the game round).  |
| parentSessionID | Long         | Id of the play session, in which the feature was triggered (unique number of the parent game round)  |
| startDate       | DateTime     | Date and time when the game round started.   |
| endDate         | DateTime     | Date and time when the game round ended.   |
| status          | String(1)    | Status of the game round, transaction or jackpot   |
| type            | String(1)    | Type of the game round or transaction  |
| bet             | Double(15,2) | Bet amount.  |
| win             | Double(15,2) | Win amount.  |
| currency        | String(3)    | Currency of the transaction, 3 letter ISO code.  |
| jackpot         | Double(15,2) | Jackpot win amount.  |
| platform        | String(1)    | The platform type (channel) on which the game was played.<br>Possible values :<br>U - Unknown<br>W - WEB<br>M - Mobile   |
| bonusCode       | String (100) | Id of the Free Spins Bonus. Is applied for rounds, played with FSB   |
| options         | String(100)  | List of settings   |
| timestamp       | DateTime     | Date and time when the transaction is processed on the Pragmatic Play side.  |
| referenceID     | String(100)  | Unique id for reference of this transaction on the Pragmatic Play side.  |
| amount          | Double(15,2) | Amount of the transaction.   |
| betAmount       | Double(15,2) | Amount of the bet.   |
| winAmount       | Double(15,2) | Amount of winning in current bet.  |

|                          |              |  |
|--------------------------|--------------|--|
| roundDetails             | String(4000) | Additional information about the current game round  |
| jackpotID                | Number(15)   | Unique identifier of the Jackpot within Pragmatic Play system.   |
| name                     | String(100)  | Name of the Jackpot.   |
| level                    | String(1)    | Level of the Jackpot   |
| games                    | String(255)  | The list of the games participating in the Jackpot. It contains gameld (game symbols), comma separated.  |
| dateTime                 | DateTime     | Date and time when the Jackpot was won.  |
| totalRounds              | Integer      | Total number of game rounds  |
| totalFreeSpinRounds      | Integer      | Total number of free spin rounds   |
| totalBet                 | Double(15,2) | Total bet amount.  |
| totalWin                 | Double(15,2) | Total win amount.  |
| totalJackpot             | Double(15,2) | Total Jackpot win amount.  |
| totalPromo               | Double(15,2) | Total amount of wins in Prize Drop campaigns   |
| startTimepoint           | Long         | Starting Time point<br>(Unix epoch time in milliseconds, for example : 1619710210000)  |
| endTimePoint             | Long         | Ending Time point<br>(Unix epoch time in milliseconds, for example : 1627486210000)  |
| amountInPlayerCurrency   | Double(15,2) | Amount in player's currency  |
| tier                     | String(5)    | Jackpot tier   |
| payoutStatus             | String(1)    | Status of the jackpot payout transaction. Possible values: <ul style="list-style-type: none"> <li>• I – In Progress (not finished yet)</li> <li>• C – Completed</li> <li>• M - Manual</li> </ul>                         |
| winDate                  | Long         | Date and time of Jackpot winning.<br>(Unix epoch time in milliseconds, for example : 1619710210000)  |
| winType                  | String(2)    | Jackpot winning type. Possible values: <ul style="list-style-type: none"> <li>• W – standard jackpot winning</li> <li>• WC – community shared jackpot winning</li> <li>• WN – non-progressive jackpot winning</li> </ul> |
| playerCurrencySymbol     | String(3)    | Symbol of player's currency  |
| finalizedRoundsSeparated | –            | show completed rounds with status 'C' and finalized/cancelled (cancelled=1) rounds with status 'F'   |
| finalizedRoundsHidden    | –            | shows only completed rounds (exclude finalized/cancelled rounds)   |

## 8.1 Environment list

The Environment list feed provides information about all operator environment domains for the specified secure login.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name        | Description   |
|-------------|---|
| secureLogin | User name for authentication in the Casino Game API service |
| hash        | Hash code of the request.                                   |

### Response parameters (JSON)

| Name         | Type                 | Description  |
|--------------|----------------------|--|
| environments | HealthPerEnvironment | The list of environment objects for each secureLogin (see data type description below) |
| error        | String(10)           | 0 - if the request was successfully processed or error code in other case.             |
| description  | String(250)          | Description of the error for troubleshooting purposes.                                 |

### Type: HealthPerEnvironment

| Name      | Type        | Description                                  | Status   |
|-----------|-------------|--|----------|
| envName   | String(30)  | Name of environment within SPE system        | Required |
| apiDomain | String(250) | Name of API service domain within SPE system | Required |

### Example of HTTP request:

```
GET /IntegrationService/v3/http/SystemAPI/environments? secureLogin=ext_test1&hash=6a3081f6a5327b-b0b5132f50965a5806 HTTP/1.1
Host: {specific server API service domain}
Cache-Control: no-cache
```

### Example of response:

```
{
  "error": "0",

## 8.2 Game Rounds

Using this data feed Casino Operator can load information about all game rounds, including not finished ones that were played during the period defined by time point, but not longer than 10 minutes.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

There two options for getting game rounds data.

*Request path: GET /DataFeeds/gamerounds/*

Returns all game rounds including unfinished. Unfinished game rounds may appear in the feed twice – first when player makes a bet and then when player gets a winning.

*Request path: GET /DataFeeds/gamerounds/finished/*

Returns only game rounds that were finished within the time interval. Each game rounds appears in the data feed only once, after it is completed.

*Request path: GET /DataFeeds/gamerounds/adjusted/*

Returns only game rounds that were Adjusted within the time interval. Each game rounds appears in the data feed only it was adjusted. Only for **Live Casino** portfolio.

Data will be returned in CSV format.

*Request parameters*

| Name      | Description  | Status   |
|-----------|--|----------|
| login     | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| password  | API password (secret key value) for authentication in the Pragmatic Play API.  | Required |
| timepoint | Time point starting from which data will be transferred. If time point is empty, the new time point will be returned.<br>(Unix epoch time in milliseconds, for example : 1470926696715)  | Optional |
| dataType  | Type of portfolio, indicates which portfolio Data Feeds should be returned<br><br><u>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</u><br><u>When there is no dataType in request, will be returned Data Feeds for RNG only</u>                      | Optional |
| options   | List of settings (String). By including it, operator can get additional information about round. Possible values are: <ul style="list-style-type: none"> <li>• addRoundDetails</li> <li>• addBalance</li> <li>• addBonusBetWin</li> <li>• finalizedRoundsSeparated</li> <li>• finalizedRoundsHidden</li> </ul> | Optional |

*Response parameters (CSV)*

| Name          | Description   | Status   |
|---------------|---|----------|
| playerID      | Player unique identifier within Pragmatic Play system.                            | Required |
| extPlayerID   | Player unique identifier within Casino Operator system.                           | Required |
| gameID        | Symbolic unique identifier of the game provided by Pragmatic Play.                | Required |
| playSessionID | Id of the player's session for particular game (unique number of the game round). | Required |

|                 |  |          |
|-----------------|--|----------|
| parentSessionID | Id of the play session, in which the feature was triggered (unique number of the parent game round). This field will contain the same value as the playSessionID field for all game rounds except free spins.<br><i>(Rows with free spins will contain the id of game round where they were triggered in the parentSessionID field and id of the free spin round in the playSessionID field)</i> | Required |
| startDate       | Date and time when the game round started.<br><i>(Will be returned in yyyy-mm-dd HH:mm:ss format, for example: "2017-08-28 02:14:13")</i>  | Required |
| endDate         | Date and time when the game round ended. Will be null if the game round is not finished yet.<br><i>(Will be returned in yyyy-mm-dd HH:mm:ss format, for example: "2017-08-28 02:14:13")</i>  | Required |
| status          | Status of the game round:<br>I – In Progress (not finished yet)<br>C – Completed<br>F – Canceled or finalized (only for /gamerounds/finished/ with finalizedRoundsSeparated option)  | Required |
| type            | Type of the game round:<br>R – game round<br>F – free spin triggered during the game round   | Required |
| bet             | Bet amount.  | Required |
| win             | Win amount.  | Required |
| currency        | Currency of the transaction, 3 letter ISO code.  | Required |
| jackpot         | Jackpot win amount.  | Required |
| bonusBet        | Bonus bet amount.  | Optional |
| bonusWin        | Bonus win amount.  | Optional |
| platform        | The platform type (channel) on which the game was played.<br><i>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need this parameter to be applied, they should ask the Pragmatic Play's Technical Support for configuration.</i><br>Possible values :<br>U - Unknown<br>W - WEB<br>M - Mobile   | Optional |
| bonusCode       | Id of the Free Spins Bonus. Is applied for rounds, played with FSB<br><i>The field is optional and is not handled by the Pragmatic Play by default. In case Casino Operator need this parameter to be applied, they should ask the Pragmatic Play's Technical Support for configuration.</i>   | Optional |
| roundDetails    | Provides additional info bets and result of the <u>live casino</u> games.<br><i>This field is optional and will appear in response in cases where request contains <u>addRoundDetails</u> in <u>options</u> list</i><br><br>Example:<br><i>"type:bets,desc:[{"c":"Even","a":"3.0"},{"c":"0G","a":"3.0"},{"c":"Red","a":"3.0"}]"</i>  | Optional |
| balance         | The balance value after the round has been processed by operator   | Optional |

*This field is optional and will appear in response in cases where request contains addBalance in options list*

*To use this addBalance in current method , Operator should accept data type: String(4000) for balance. It is also not handled by the Pragmatic Play by default. In case Casino Operator need this parameter to be applied, they should ask the Pragmatic Play's Technical Support for configuration.*

#### **Example of HTTP request:**

## 8.3 In-game transactions

*Request path: GET /DataFeeds/transactions/*

Using this data feed Casino Operator can load money transactions for all game rounds that were played during the period defined by time point, but not longer than 10 minutes. Data will be returned in CSV format.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name      | Description   | Status   |
|-----------|---|----------|
| login     | API user name (secureLogin value) for authentication in the Pragmatic Play API.   | Required |
| password  | API password (secret key value) for authentication in the Pragmatic Play API.   | Required |
| timepoint | Time point starting from which data will be transferred. If time point is empty, the new time point will be returned.<br><br><i>(Unix epoch time in milliseconds, for example : 1470926696715)</i>  | Optional |
| dataType  | Type of portfolio, indicates which portfolio Data Feeds should be returned<br><br><u><i>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</i></u><br><u><i>When there is no dataType in request, will be returned Data Feeds for RNG only</i></u>   | Optional |
| options   | List of settings. By including it, operator can get additional information about transaction. Possible values are: <ul style="list-style-type: none"> <li>• addTransactionStatus</li> <li>• addJPContributionAmount</li> <li>• onlyPromoWins – only wins in PrizeDrops campaigns will be returned.</li> </ul><br><i>*If a request has an onlyPromoWins option, the response should contain only transactions with type = P (win in promotional campaign).</i> | Optional |

### Response parameters (CSV)

| Name          | Description  | Status   |
|---------------|--|----------|
| playerID      | Player unique identifier within Pragmatic Play system.   | Required |
| extPlayerID   | Player unique identifier within Casino Operator system.  | Required |
| gameID        | Symbolic unique identifier of the game provided by Pragmatic Play.   | Required |
| playSessionID | Id of the player's session for particular game (unique number of the game round).  | Required |
| timestamp     | Date and time when the transaction is processed on the Pragmatic Play side.<br><br><i>(Unix epoch time in milliseconds, for example : 1470926696715)</i>   | Required |
| referenceID   | Unique id for reference of this transaction on the Pragmatic Play side.  | Required |
| type          | Type of the transaction:<br>B – player made a bet<br>W – player won<br>V – Partial win transaction (closes the round)<br>L – Cancel bet transaction (for finalized rounds)<br>R – refund transaction<br>J – Player won Jackpot | Required |

| P – Win in promotional campaign |  |          |
|---------------------------------|--|----------|
| amount                          | Amount of the transaction.   | Required |
| currency                        | Currency of the transaction, 3 letter ISO code.  | Required |
| contributionAmount              | The amount of contribution for round that takes part in the Jackpot<br><br><i>This field is optional and will appear in response in cases where request contains <u>addJPContributionAmount</u> in <u>options</u> list</i>                             | Optional |
| status                          | Current status of transaction. Possible values are:<br>S – success<br>L – canceled<br>R – refunded<br><br><i>This field is optional and will appear in response in cases where request contains <u>addTransactionStatus</u> in <u>options</u> list</i> | Optional |

**Example of HTTP request:**

```
GET /IntegrationService/v3/DataFeeds/transactions/?
login=username&password=testKey&timepoint=1482510713000&options=addTransactionStatus HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

**Example of response:**

```
timepoint=1482510809258
playerID,extPlayerID,gameID,playSessionID,timestamp,referenceID,type,amount,currency,status

```

## 8.4 Failed Transactions

*Request path: GET /DataFeeds/failedtransactions/*

Feed for getting Refund and BetResult/Result transactions which weren't processed even during asynchronous sending.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name      | Description  | Status   |
|-----------|--|----------|
| login     | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| password  | API password (secret key value) for authentication in the Pragmatic Play API.  | Required |
| timepoint | Timepoint starting from which data will be transferred. If timepoint is empty, the new timepoint will be returned.<br>(Unix epoch time in milliseconds, for example : 1470926696715) | Optional |

### Response parameters (CSV)

| Name          | Description   | Status   |
|---------------|---|----------|
| playerID      | Player unique identifier within Pragmatic Play system.  | Required |
| extPlayerID   | Player unique identifier within Casino Operator system.   | Required |
| gameID        | Symbolic unique identifier of the game within the Pragmatic Play system. <i>Example: vs25queenofgold, vs50aladdin, cs5triple8gold, bjma, rla, vpa</i><br><br>The list of available games may be obtained by Casino Operator by calling GetCasinoGames method of CasinoGameAPI HTTP service. | Required |
| playSessionID | Id of the player's session for particular game (unique number of the game round).   | Required |
| referenceID   | Unique id for reference of this transaction on the Pragmatic Play side.   | Required |
| betAmount     | Amount of the bet.  | Required |
| winAmount     | Amount of winning in current bet.   | Required |
| timestamp     | Date and time when the transaction is processed on the Pragmatic Play side.<br>(Unix epoch time in milliseconds, for example : 1470926696715)   | Required |
| roundDetails  | Additional information about the current game round, comma separated.<br>Example: "spin,bonus"  | Required |

### Example of HTTP request:

```
GET /IntegrationService/v3/DataFeeds/failedtransactions/? login=username&password=testKey&timepoint=1482510713000 HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

### Example of response:

```
timepoint=1482510979767
playerID,extPlayerID,referenceID,gameID,playSessionID,betAmount,winAmount,timestamp,roundDetails
```

## 8.5 Active Jackpots (replacement of previous version)

*Request path: GET /JackpotFeeds/extended/jackpots*

Active Jackpots feed provides information about open jackpots and their open tiers (progressive) per casino brand. Operator will get in the response a list of the open jackpots including detailed info about their open/active (not won) tiers in JSON format. Information about non-progressive (multiplier) tiers is not displayed in this feed.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

**Important:** In case there are no active jackpots according to the given criteria, an empty list is returned in the response.

*Request parameters*

| Name     | Description  | Status   |
|----------|--|----------|
| login    | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| currency | ISO-4217 code currency. Currency for JP amounts returned in feed. If missed, then amounts are returned in the main jackpot currency. | Optional |
| hash     | Hash code of the request.  | Required |

*Response parameters (JSON)*

| Name          | Description   | Status   |
|---------------|---|----------|
| mainJackpotID | Unique identifier (parent/main) of the Jackpot within Pragmatic Play system.  | Required |
| name          | Name of the Jackpot.  | Required |
| level         | Level of the Jackpot: <ul style="list-style-type: none"> <li>G – Global Jackpot</li> <li>N – Network jackpot,</li> <li>O – Jackpot for particular Operation</li> <li>B – Jackpot for particular casino Brand</li> </ul> | Required |
| games         | The list of the games participating in the Jackpot. It contains gameld (game symbols), comma separated.<br><i>Example: vs25safari_jp,vs30catz_jp,vs7monkeys_jp</i>  | Required |
| status        | Current status of the Jackpot. Possible values:<br>A – Active<br>S – Shutdowned   | Required |
| tiersNumber   | Parameter indicating the total number of progressive tiers (active and won) configured for a Jackpot. For Single-tier jackpots the value “1” will be specified. The non-progressive tier should NOT be included.        | Required |

*Type: Tiers*

This list displays information only for active/open (not won) progressive tiers. Information about non-progressive (multiplier) tiers is not displayed in the list.

| Name          | Description   | Status   |
|---------------|---|----------|
| jackpotTierID | Unique identifier of the Jackpot <b>Tier</b> within the Pragmatic Play system.  | Required |
| tier          | Jackpot tier name identifier. The tier index (0 - 3) that operator receives in API should be mapped with the appropriate tier in the game:<br>0 – the 1 <sup>st</sup> tier (the lowest).<br>1 – the 2 <sup>nd</sup> tier.<br>2 – the 3 <sup>rd</sup> tier,<br>3 – the 4 <sup>th</sup> tier (the highest). | Required |
| amount        | Jackpot fund (for specific tier) for the moment of request, in USD by default. Or values can be returned in the requested currency.   | Required |

*Example of HTTP request:*

```
GET /IntegrationService/v3/JackpotFeeds/extended/jackpots/?
login=username&hash=67ea77ad83celc153f73cddaeee2c577 HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

*Example of JSON response (multiple-tiers):*

```
{
  "jackpots": [
    {
      "mainJackpotID": 459,
      "name": "test_name",
      "level": "B",
      "games": "vsprg20doghouse",
      "status": "A",
      "tiersNumber": 4,
      "tiers": [
        {
          "jackpotTierID": 459,
          "tier": 0,
          "amount": 10 },
        ....
        {
          "jackpotTierID": 460,
          "tier": 1,
          "amount": 200 }}}
      ],
    "error": "0",
    "description": "OK"
  }
}
```

*Example of JSON response (single-tier):*

```
{
  "jackpots": [
    {
      "mainJackpotID": 459,
      "name": " test_name_2",
      "level": "B",
      "games": "vsprg20doghouse",
      "status": "A",
      "tiersNumber": 1,
      "tiers": [
        {
          "jackpotTierID": 459,
          "tier": 0,
          "amount": 10 }}}
      ],
    "error": "0",
  }
```

```
"description": "OK"  
}
```

**In case there are no active jackpots:**

```
{"winners": [],  
  "error": "0",  
  "description": "OK"}
```

## 8.6 Jackpot Winners (replacement of previous version)

*Request path: GET /JackpotFeeds/extended/winners*

The Jackpot Winners feed provides information about jackpot winnings including progressive jackpot wins and community share part. An operator will get in the response a list of the winners in JSON format.

Maximal period of Jackpot Winners DataFeeds for which data can be transferred is not more than 30 days

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name           | Description  | Status   |
|----------------|--|----------|
| login          | API user name (secureLogin value) for authentication in the Pragmatic Play API.                                    | Required |
| startTimepoint | Starting Time point for transferring data period<br>(Unix epoch time in milliseconds, for example : 1619710210000) | Required |
| endTimepoint   | Ending Time point for transferring data period<br>(Unix epoch time in milliseconds, for example : 1627486210000)   | Required |
| hash           | Hash code of the request.  | Required |

### Response parameters (JSON)

| Name        | Type   | Description  |
|-------------|--------|--|
| winners     | List   | List of Jackpot winners during requested period. See below Winners type description of the objects in the list |
| error       | String | Error code   |
| description | String | Description of the error for troubleshooting   |

### Type: Winners

| Name          | Description  | Status   |
|---------------|--|----------|
| jackpotTierID | Unique identifier of the Jackpot Tier within the Pragmatic Play system.  | Required |
| extPlayerID   | Player unique identifier within Casino Operator system.  | Required |
| winAmount     | Won jackpot amount in player's currency.   | Required |
| winDate       | Date and time of Jackpot winning. For community part it is the date and time for creating transaction<br>(Unix epoch time in milliseconds, for example : 1619710210000)  | Required |
| winType       | Jackpot winning type. Possible values: <ul style="list-style-type: none"> <li>W – standard jackpot winning</li> <li>WC – community shared jackpot winning</li> <li>NW – non-progressive jackpot winning</li> </ul> | Required |
| playSessionID | Unique number of the play session (game round) in which Jackpot was won<br>Optional, is used optional standard jackpot wins  | Optional |
| currency      | Currency of the player.  | Required |

**Example of HTTP request:**

```
GET /IntegrationService/v3/JackpotFeeds/extended/winners/?
login=username&hash=67ea77ad83ce1c153f73cddaeee2c577&startTimepoint=1619710210000&endTimepoint=1627
486210000 HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

**Example of JSON response:**

```
{
  "winners": [
    {
      "jackpotTierID": 3924,
      "extPlayerID": "459",
      "winAmount": 8.60,
      "winDate": 1620890276322,
      "winType": "W",
      "playSessionID": 10293633659602,
      "currency": "USD"
    },
    ....
    {
      "jackpotTierID": 3925,
      "extPlayerID": "460",
      "winAmount": 15,
      "winDate": 1620890648909,
      "winType": "NW",
      "playSessionID": 10293686600602,
      "currency": "USD"
    }
  ],
  "error": "0",
  "description": "OK"
}
```

## 8.7 Jackpot Winnings

*Request path: GET /JackpotFeeds/extended/winnings*

Jackpot Winnings feed provides information on jackpot winnings for each active jackpot tier for the entire jackpot lifetime, indicating the total number of winnings, as well as the amount and winner of the largest and last winnings.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

*Request parameters*

| Name          | Description  | Status   |
|---------------|--|----------|
| login         | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| mainJackpotID | Unique identifier (parent/main) of the Jackpot within the Pragmatic Play system.   | Required |
| currency      | ISO-4217 code currency. Currency for JP amounts returned in feed. If missed, then amounts are returned in the main jackpot currency. | Optional |
| hash          | Hash code of the request.  | Required |

*Response parameters (JSON)*

| Name        | Type   | Description   |
|-------------|--------|---|
| name        | String | Name of the Jackpot.  |
| tiers       | List   | List of tier objects for transferring details for tiers. See below (tiers type) the description of the objects in the list. |
| error       | String | Error code  |
| description | String | Description of the error for troubleshooting  |

*Type: tiers*

| Name          | Type   | Description  | Status   |
|---------------|--------|--|----------|
| jackpotTierID | String | Unique identifier of the Jackpot Tier within the Pragmatic Play system.  | Required |
| tier          | Number | <p>Jackpot tier name identifier. The tier index (0 - 3) that the operator receives in API should be mapped with the appropriate tier in the game:</p> <ul style="list-style-type: none"> <li>0 – the 1st tier (the lowest)</li> <li>1 – the 2nd tier</li> <li>2 – the 3rd tier</li> <li>3 – the 4th tier (the highest).</li> </ul> | Required |
| numberOfWins  | Number | Number of times the jackpot tier was won during the jackpot tier lifetime.   | Required |
| biggestWin    | Array  | Set of biggest win parameters. See below (biggestWin type) parameters description.   | Required |
| lastWin       | Array  | Set of last win parameters. See below (lastWin type) parameters description.   | Required |

*Type: biggestWin*

| Name              | Type         | Description  | Status   |
|-------------------|--------------|--|----------|
| winDate           | Number       | Date and time of the biggest win in the jackpot tier lifetime. (Will be returned as timestamp in milliseconds).  | Required |
| winAmount         | Number(15,2) | Amount of the biggest win in the jackpot tier lifetime.  | Required |
| extPlayerID       | String       | Identifier of the player (within the Casino Operator system) who won the biggest win within the jackpot tier. Is returned only if the player belongs to the Casino that sends the request. | Optional |
| maskedExtPlayerID | String       | Identifier of the player (within the Casino Operator system) who won the biggest win within the jackpot tier. Is returned in masked view.  | Required |

*Type: lastWin*

| Name              | Type         | Description   | Status   |
|-------------------|--------------|---|----------|
| winDate           | Number       | Date and time of the last win in the jackpot tier lifetime. (Will be returned as timestamp in milliseconds).  | Required |
| winAmount         | Number(15,2) | Amount of the last win in the jackpot tier.   | Required |
| extPlayerID       | String       | Identifier of the player (within the Casino Operator system) who won the last win within the jackpot tier. Is returned only if the player belongs to the Casino that sends the request. | Optional |
| maskedExtPlayerID | String       | Identifier of the player (within the Casino Operator system) who won the last win within the jackpot tier. Is returned in masked view.  | Required |

## 8.8 Daily Totals

*Request path: GET /DataFeeds/totals/daily/*

Daily Totals API provides aggregated data grouped by currency for every day from a certain period. Operator can use this method for cross checking their data. Only completed game rounds are included in the response. If a game round was started in one day and finished in another day, its results will be included in the daily totals for the day it was finished. Data will be returned in JSON format.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

Since the results of this API are based on daily totals for the day it was finished, make sure that the same setting is applied in the back-office report so it could be compared correctly. If the setting is absent, then refer to the back-office user guide to determine the exact type of aggregation for the specific report.

### Request parameters

| Name      | Description   | Status   |
|-----------|---|----------|
| login     | API user name (secureLogin value) for authentication in the Pragmatic Play API.   | Required |
| password  | API password (secret key value) for authentication in the Pragmatic Play API.   | Required |
| startDate | Start date and time of the period for which the data should be loaded   | Required |
| endDate   | End date and time of the period for which the data should be loaded   | Required |
| dataType  | Type of portfolio, indicates which portfolio Data Feeds should be returned<br><br><i><u>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</u></i><br><i><u>When there is no dataType in request, will be returned Data Feeds for RNG only</u></i> | Optional |
| options   | List of settings. By including it, operator can get additional totals.<br>Possible values are:<br>• <u>addTotalPromo</u> – for Prize Drop wins  | Optional |

### Response parameters (JSON)

| Name                | Description  | Status   |
|---------------------|--|----------|
| totalRounds         | Total number of game rounds completed during the reporting period, including in-game free spin rounds and Free Spins Bonus / Free Chips rounds.  | Required |
| totalFreeSpinRounds | Total number of in-game free spin rounds completed during reporting period   | Required |
| totalBet            | Total bet amount.  | Required |
| totalWin            | Total win amount.  | Required |
| totalJackpot        | Total Jackpot win amount.  | Required |
| totalPromo          | Total amount of wins in Prize Drop campaigns.<br><i><u>This field is optional and will appear in response in cases where request contains <u>addTotalPromo</u> in options list</u></i> | Optional |
| currency            | Currency, 3 letter ISO code.   | Required |

***Example of HTTP request:***

```
GET /IntegrationService/v3/DataFeeds/totals/daily/?login=username&password=testKey&startDate=2018-05-21 00:00:00&endDate=2018-05-22 00:00:00&options=addTotalPromo
23:59:59 HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

***Example of JSON response:***

```
{ "error": "0",
  "description": "OK",
  "data": [

    {
      "totalRounds": 48,
      "totalFreeSpinRounds": 10,
      "totalBet": 48,
      "totalWin": 92.68,
      "totalJackpot": 0,
      "totalPromo": 0,
      "currency": "RMB"
    }
  ]
}
```

## 8.9 Player's Incomplete Rounds

*Request path: GET /DataFeeds/gamerounds/incomplete/*

This report returns all the game rounds that were started by a certain player but not completed yet.

Data will be returned in JSON format.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name     | Description   | Status   |
|----------|---|----------|
| login    | API user name (secureLogin value) for authentication in the Pragmatic Play API.   | Required |
| password | API password (secret key value) for authentication in the Pragmatic Play API.   | Required |
| playerId | Id of the player within the Casino Operator's system.   | Required |
| dataType | Type of portfolio, indicates which portfolio Data Feeds should be returned<br><br><i><u>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</u></i><br><i><u>When there is no dataType in request, will be returned Data Feeds for RNG only</u></i> | Optional |

### Response parameters (JSON)

| Name          | Description   | Status   |
|---------------|---|----------|
| playerId      | Id of the player within the Casino Operator's system.                             | Required |
| gameId        | Id of the game.   | Required |
| playSessionID | Id of the player's session for particular game (unique number of the game round). | Required |
| betAmount     | Bet amount.   | Required |

### Example of HTTP request:

```
GET /IntegrationService/v3/DataFeeds/gamerounds/incomplete/? login=username&password=testKey&playerId= bobtest HTTP/1.1
Host: {domain received from environments API}
Cache-Control: no-cache
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK",
  "playerId": "bobtest",
  "data": [
    {
      "gameId": "vs50aladdin",
      "playSessionID": "2352191424",
      "betAmount": 10.00
    },
    {
      "gameId": "vs20bl",
      "playSessionID": "23521914534",
      "betAmount": 20.00
    },
    {
      "gameId": "vs20cm",
```

```
"playSessionID": "2352191665",  
"betAmount": 30.00    }  
]  
}
```

## 8.10 Canceled Rounds

*Request path: GET /DataFeeds/gamerounds/canceled/*

This report returns all the game rounds that were canceled.

Data will be returned in CSV format.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

### Request parameters

| Name      | Description  | Status   |
|-----------|--|----------|
| login     | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| password  | API password (secret key value) for authentication in the Pragmatic Play API.  | Required |
| timepoint | Timepoint starting from which data will be transferred. If timepoint is empty, the new timepoint will be returned.<br>(Unix epoch time in milliseconds, for example : 1470926696715)   | Optional |
| options   | List of settings. By including it, operator can get only partial win rounds.<br>Possible values are:<br><ul style="list-style-type: none"> <li>• <u>onlyPartialWin</u> – for return only rounds with partial win.</li> <li>• <u>addBonusBetWin</u> – for returns bonus part of the bet and win.</li> </ul> | Optional |

### Response parameters (CSV)

| Name            | Description   | Status   |
|-----------------|---|----------|
| playerID        | Player unique identifier within Pragmatic Play system.  | Required |
| extPlayerID     | Player unique identifier within Casino Operator system.   | Required |
| gameID          | Symbolic unique identifier of the game provided by Pragmatic Play.  | Required |
| playSessionID   | Id of the player's session for particular game (unique number of the game round).   | Required |
| parentSessionID | Id of the play session, in which the feature was triggered (unique number of the parent game round). This field will contain the same value as the playSessionID field for all game rounds except free spins.<br>(Rows with free spins will contain the id of game round where they were triggered in the parentSessionID field and id of the free spin round in the playSessionID field) | Required |
| startDate       | Date and time when the game round started.<br>(Will be returned in yyyy-mm-dd HH:mm:ss format, for example: "2017-08-28 02:14:13")  | Required |
| endDate         | Date and time when the game round ended. Will be null if the game round is not finished yet.<br>(Will be returned in yyyy-mm-dd HH:mm:ss format, for example: "2017-08-28 02:14:13")  | Required |
| status          | Status of the game round:<br>I – In Progress (not finished yet)<br>C – Completed  | Required |
| type            | Type of the game round:<br>R – game round<br>F – free spin triggered during the game round  | Required |
| bet             | Bet amount.   | Required |

|          |   |          |
|----------|---|----------|
| win      | Win amount.                                     | Required |
| currency | Currency of the transaction, 3 letter ISO code. | Required |
| jackpot  | Jackpot win amount.                             | Required |
| bonusBet | Bonus bet amount.                               | Optional |
| bonusWin | Bonus win amount.                               | Optional |

## IX. Promotions API

Tournament API allows operators to set up an automated procedures related to Pragmatic tournaments.

For Global tournaments, all tournament winners will be returned in response.

But **only playerIds belonging to the operator, will be included in response**, playerIds of other operators will not be included in the response.

### 9.1 Tournament Winners

*Request path: GET /tournaments/winners/*

This API method returns winners for all **RNG** and **Live casino** tournaments that were closed during requested period of time. The period between the requested start and end date should not be longer than 31 days.

Data will be returned in JSON format.

Processing of DataFeeds should be performed with the general flow described in section 8 **Data feeds and reports**

#### Recommendations for API request frequency limits:

It is recommended that the casino operator use this API method no more often than one request per 60 minutes with an interval of at least 60 minutes between the startDate and the endDate.

#### Request parameters

| Name      | Type       | Description  | Status   |
|-----------|------------|--|----------|
| login     | String(30) | API user name (secureLogin value) for authentication in the Pragmatic Play API.  | Required |
| password  | String(30) | API password (secret key value) for authentication in the Pragmatic Play API.  | Required |
| startDate | Date       | Start date of the period for which the data should be loaded.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>   | Required |
| endDate   | Date       | End date of the period for which the data should be loaded.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>   | Required |
| options   | String     | List of settings. By including it, operator can get additional information about tournament. Possible values are: <ul style="list-style-type: none"> <li>addWinTime</li> </ul> | Optional |

#### Response parameters (JSON)

| Name        | Type   | Description  |
|-------------|--------|--|
| tournaments | List   | List of tournaments that were closed during requested period. See below Tournament type description of the objects in the list |
| error       | String | Error code   |
| description | String | Description of the error for troubleshooting   |

*Type: Tournament*

| Name         | Type       | Description  |
|--------------|------------|--|
| tournamentID | Number(15) | Id of the tournament   |
| name         | String     | Name of the tournament   |
| dateOpened   | Date       | Date and time when the tournament started.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>  |
| dateClosed   | Date       | Date and time when the tournament was finished.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>   |
| winners      | List       | Tournament winners – the list of top players that were awarded with tournament prizes. See below “Tournament Winner” type description of the objects in the list |

*Type: Tournament Winner*

| Name               | Type         | Description   |
|--------------------|--------------|---|
| playerID           | String       | Id of the player within the operator’s system.  |
| tournamentPlayerID | Number(15)   | Player’s id within the tournament   |
| position           | Number(5)    | Rank of the player in the tournament  |
| score              | Number(15)   | Score of the player   |
| prizeGift          | String       | Gift, which the player will receive as a prize. This field is optional and will appear only if prizeAmount, prizeCoins, prizeCurrency fields are not present in the response.   |
| prizeAmount        | Number(15,2) | Prize amount that the player is awarded with.<br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i> |
| prizeCoins         | Number(15)   | Prize amount in coins.<br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i>                        |
| prizeCurrency      | String       | Currency code for prize amount.<br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i>               |
| winEventTime       | Date         | Date and time of the player’s win event.<br><i>This field is optional and will appear in response in cases where request contains <u>addWinTime</u> in <u>options list</u>.</i>   |

*Example of HTTP request:*

```

  "winEventTime" : "2018-01-20 08:33:00"  
}]  
} ]  
}
```

## 9.2 Tournament Active

*Request path: GET/tournaments/active*

This API method returns a list of current (in 'Started' status) tournaments as of a certain date. The operator will get the list of tournaments, including detailed information about each one, in JSON format.

### Recommendations for API request frequency limits:

It is recommended that the casino operator use this API method no more often than one request per 30 minutes.

### Request parameters

| Name         | Type   | Description   | Status   |
|--------------|--------|---|----------|
| secureLogin  | String | API user name (secureLogin value) for authentication in Pragmatic Play API.   | Required |
| hash         | String | Hash code of request.   | Required |
| currencies   | String | ISO-4217 code currency. Currencies for prize pool and limits returned in feed.<br><i>If this parameter is missed in request, then amounts are returned in the main tournament currency.</i>   | Optional |
| dataType     | String | Product vertical for which promotion is created. Available values are:<br>1. RNG – Slots & More games.<br>2. LC – Live Games.<br><br>If missed, tournaments for all products are returned.  | Optional |
| activityDate | Date   | Date in the format 'yyyy-MM-dd' for which active tournaments should be returned. This is the date on which these tournaments were/will be active.<br><br>If the activityDate parameter is specified and this value is in the past, this date should not be earlier than 31 days from the current date (date of sending the request).<br><br><i>If this parameter is missed, the response will contain the list of tournaments that are/were in Started status on the date when the request is sent (even if the tournament end date is on that day and the tournament has already ended at the time the request is sent).</i> | Optional |

### Response parameters (JSON)

| Name            | Type   | Description   |
|-----------------|--------|---|
| tournamentsList | List   | List of active tournaments in which the casino participates. Description of objects in the list see below (tournamentsList type). |
| error           | String | Error code.   |
| description     | String | Description of the error for troubleshooting.   |

### Type: tournamentsList

| Name         | Type   | Description   |
|--------------|--------|---|
| tournamentID | Number | Tournament ID.  |
| name         | String | Name of the tournament (EN version).  |
| dataType     | String | Product vertical for which this promotion is created. Available values are: |

|                      |        |   |
|----------------------|--------|---|
|                      |        | 3. RNG – Slots & More games.<br>4. LC – Live Games.   |
| level                | String | Promotion level. Available values are:<br><br>5. B - Bespoke,<br>6. N - Network.  |
| startDate            | Date   | Date and time when the tournament starts.<br><br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>  |
| endDate              | Date   | Date and time when the tournament ends.<br><br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>  |
| prizePoolList        | List   | List of Tournament total prize pool in different currencies (according to those specified in request). Includes just fixed prizes, without prizes with bet multiplier. Description of objects in the list see below (prizePoolList type). |
| numberOfPrizes       | Number | Number of prizes in the Tournament.   |
| minBetList           | List   | Minimal bet to participate in the Tournament. Is sent in different currencies (according to those specified in request). Description of objects in the list see below (minBetList type).  |
| minRounds            | Number | Minimal number of rounds to participate in the Tournament. Is returned if it's configured in the Tournament.  |
| minWageredAmountList | List   | Minimal total bet amount required for the players to participate in the tournament.<br>The scoring starts after the qualification is reached. Is returned if it's configured in the Tournament  |
| games                | String | List of the games participating in the tournament. It contains gameld (game symbols), comma separated.<br><br><i>Example: "vs20cricksugar", "vs20olymp12gate", "vs20fruitsw188".</i>  |

*Type: prizePoolsList*

| Name     | Type         | Description   |

## 9.3 Tournament Prizes

*Request path: GET/tournaments/prizes*

This API method returns a list of prizes for a specific tournament in JSON format.

### Recommendations for API request frequency limits:

It is recommended that the casino operator request this method once for each tournament ID, as the returned data does not change.

It is also recommended to use this API method for different tournament IDs no more often than one request per 30 minutes.

### Request parameters

| Name         | Type   | Description   | Status   |
|--------------|--------|---|----------|
| secureLogin  | String | API user name (secureLogin value) for authentication in Pragmatic Play API.   | Required |
| hash         | String | Hash code of request.   | Required |
| tournamentID | Number | ID of the tournament for which prizes will be received.   | Required |
| currencies   | String | ISO-4217 code currency. Currencies for amounts returned in feed.<br><i>If this parameter is missed in the request, then amounts are returned in the main tournament currency.</i> | Optional |

### Response parameters (JSON)

| Name        | Type   | Description                                   |
|-------------|--------|---|
| error       | String | Error code.                                   |
| description | String | Description of the error for troubleshooting. |
| prizeList   | List   | List of prizes configured for the tournament. |

### Type: prizeList

| Name                 | Type   | Description   |
|----------------------|--------|---|
| positionFrom         | Number | Starting position in the leaderboard position interval for which this prize is awarded.   |
| positionTo           | Number | Ending position in the leaderboard position interval for which this prize is awarded.   |
| prizeType            | String | Gift that players (from the specific leaderboard position interval) will receive as the prize. Available values are: <ul style="list-style-type: none"> <li>7. Fixed Prize Amount,</li> <li>8. Text Prize,</li> <li>9. Bet Multiplier,</li> <li>10. Free Spins,</li> <li>11. Countdown FS,</li> <li>12. Instant Bonus.</li> </ul> |
| amountInCurrencyList | List   | Prize amount that players within the 'Fixed Prize Amount' prize type will receive. This field is optional and will appear only if prizeType is 'Fixed Prize Amount'.  |

|             |        |  |
|-------------|--------|--|
| text        | String | Gift in the form of text gift that players within the 'Text Prize' prize type will receive. This field is optional and will appear only if prizeType is 'Text Prize'.                        |
| multiplier  | Number | Gift in the form of bet multiplier that players within the 'Bet Multiplier' prize type will receive. This field is optional and will appear only if prizeType is 'Bet Multiplier'.           |
| spinsNumber | Number | Gift in the form of free spins that players within the 'Free Spins' prize type will receive. This field is optional and will appear only if prizeType is 'Free Spins'.                       |
| seconds     | Number | Gift in the form of Countdown Free Spins Bonuses that players within the 'Countdown FS' prize type will receive. This field is optional and will appear only if prizeType is 'Countdown FS'. |

*Type: amountInCurrencyList*

| Name     | Type         | Description  |
|----------|--------------|--|
| currency | String       | Symbolic code of currency.<br><i>Example: "USD", "EUR".</i>  |
| amount   | Number(15,2) | Prize amount (converted from coins) players within the Fixed Prize Amount prize type will receive. |

*Example of HTTP request:*

```
GET /IntegrationService/v3/http/tournaments/prizes/?secureLogin=username&tournamentID=10&currencies=USD,EUR&hash=183855d03e4b4fc666f4963e4966173c HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

*Example of JSON response:*

```

  "positionTo" : 35,
  "prizeType" : "Instant Bonus"
}
]
}
```

## 9.4 Tournament Leaderboard

*Request path: GET/tournaments/leaderboard*

This API method returns the top X players (from the leaderboard) for a specific tournament in JSON format.

### Recommendations for API request frequency limits:

It is recommended to use this API method only when there are active tournaments and not more often than one request per 10 minutes.

If the tournaments have already ended, there is no need to request the data, as the returned data will no longer change.

### Request parameters

| Name            | Type   | Description  | Status   |
|-----------------|--------|--|----------|
| secureLogin     | String | API user name (secureLogin value) for authentication in Pragmatic Play API.  | Required |
| hash            | String | Hash code of request.  | Required |
| tournamentID    | Number | ID of the tournament for which the leaderboard will be received.   | Required |
| leaderboardSize | Number | Number of top players from the leaderboard that should be sent for the tournament in response. If it's missed, winning positions will be sent. | Optional |

### Response parameters (JSON)

| Name            | Type   | Description   |
|-----------------|--------|---|
| error           | String | Error code.   |
| description     | String | Description of the error for troubleshooting.   |
| leaderboardList | List   | List of top X players (from the leaderboard) of the tournament. This list should be sent in order from 1st to the last player in the leaderboard interval. Description of the objects in the list see below (leaderboardList type). |

### Type: leaderboardList

| Name               | Type       | Description   |
|--------------------|------------|---|
| playerID           | String     | Player's ID within operator's system. This parameter will be sent only if the player belongs to the casino that sent the request. |
| tournamentPlayerID | Number(15) | Player's ID within the tournament   |
| position           | Number(15) | Player's rank within the tournament.  |
| score              | Number(15) | Player's score within the tournament.   |

### Example of HTTP request:

```
GET /IntegrationService/v3/http/tournaments/leaderboard/?
secureLogin=username&tournamentID=10&leaderboardSize=20&hash=b25b9a3510c9edd8dd910d949e4fb782
HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

*Example of JSON response:*

```
{
  "error" : 0,
  "description" : "OK",
  "leaderboardList" : [ {
    "playerID" : "3432432432",
    "tournamentPlayerID" : 100,
    "position" : 1,
    "score" : 10000
  },
    ...
  {
    "playerID" : "98656789",
    "tournamentPlayerID" : 57,
    "position" : 20,
    "score" : 1000
  }
]
```

## 9.5 Prize Drop Winners

*Request path: GET /prizedrops/winners*

This API method returns winners for all RNG and Live casino prize drops that were awarded during the requested period. The requested period is defined by time point, but not longer than 10 minutes.

Data will be returned in JSON format.

### Recommendations for API request frequency limits:

It is recommended that the casino operator use this API method no more often than one request per 10 minutes.

### Request parameters

| Name        | Type       | Description  | Status   |
|-------------|------------|--|----------|
| secureLogin | String(30) | API user name (secureLogin value) for authentication in the Pragmatic Play API   | Required |
| hash        | String     | Hash code of the request   | Required |
| timepoint   | Number     | Time point starting from which data will be transferred. If time point is empty, the new time point will be returned.<br>(Unix epoch time in milliseconds, for example: 1470926696715) | Optional |

### Response parameters (JSON)

| Name        | Type   | Description  |
|-------------|--------|--|
| error       | String | Error code   |
| description | String | Description of the error for troubleshooting   |
| timepoint   | Number | The new time point   |
| winners     | List   | Prize drop winners – the list of players who were awarded prizes during the requested period. See below “Prize Drop Winner” type description of the objects in the list. |

### Type: Prize Drop Winner

| Name        | Type   | Description  |
|-------------|--------|--|
| playerID    | String | Id of the player within the operator’s system        |
| prizeDropID | Number | Id of the prize drop                                 |
| dataType    | String | Portfolio type. Possible values:<br>LC – Live casino |

| RNG – main portfolio games (video slots, classic slots etc.) |              |   |
|--|--------------|---|
| prizeDropPlayerID  | Number(15)   | Player's id within the prize drop   |
| winDate  | Date         | Date and time when the prize is added to the player's balance. For expired prizes, it is the expiration date.<br><br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>  |
| roundID  | Number       | ID of the round where the prize was won   |
| status   | String       | Status of the prize:<br>A – Awarded<br>E – Expired<br>F – Failed  |
| prizeGift  | String       | Gift, which the player will receive as a prize. This field is optional and will appear only if prizeAmount, prizeCoins, prizeCurrency fields are not present in the response.   |
| prizeAmount  | Number(15,2) | Prize amount that the player is awarded with.<br><br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i> |
| prizeCoins   | Number(15)   | Prize amount in coins.<br><br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i>                        |
| prizeCurrency  | String       | Currency code for prize amount.<br><br><i>The field is optional and will appear only if there is no prizeGift field in the response. Please note, that prizeAmount, prizeCoins, prizeCurrency should appear together.</i>               |

**Example of HTTP request:**

```
GET /IntegrationService/v3/http/prizedrops/winners?secureLogin=username&hash=ce7fc0f009e5fd-
d27058c0c35c76b118&timepoint=1516440180000 HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

**Example of JSON response (3 winners: cash, text prize and winner with expired prize):**

```
{ "error" : 0,
  "description" : "OK",
  "timepoint" : 1516440780000,

  "status" : "E",
  "prizeAmount" : 0.0,
  "prizeCurrency" : "USD"
}]
} ] }
```

## 9.6 Active Prize Drops

*Request path: GET/prizedrops/active*

Active Prize Drops method provides a list of casino prize drops that were/are/will be active on a specific date. Operator can request:

- either a list of **all** active prize drops, or prize drops for **live casino**, or prize drops for **slots** (specifying *dataType* parameter in the request);
- prize drops that were/will be in 'Started' status on a **specific date**. That is, the operator can specify a date in the request, and all prize drops that will be/were in 'Started' status on that day (even if the prize drop started on that day or will end on that day) will be returned in the response.

*Request parameters*

| Name         | Type   | Description   | Status   |
|--------------|--------|---|----------|
| secureLogin  | String | API user name (secureLogin value) for authentication in Pragmatic Play API.   | Required |
| hash         | String | Hash code of request.   | Required |
| currencies   | String | ISO-4217 code currency. Currencies for prize pool and other amounts returned in feed.<br><br><i>If this parameter is missed in the request, then amounts are returned in the main prize drop currency.</i>  | Optional |
| dataType     | String | Product vertical for which promotion was created. Available values are: <ul style="list-style-type: none"> <li>• RNG – Slots &amp; More games.</li> <li>• LC – Live Games.</li> </ul> If missed, prize drops for all product verticals are returned.  | Optional |
| activityDate | Date   | Date in the format 'yyyy-MM-dd' for which active prize drops should be returned. This is the date on which these prize drops were/will be active.<br><br>If the activityDate parameter is specified and this value is in the past, this date should not be earlier than 31 days from the current date (date of sending the request).<br><br><i>If this parameter is missed, the response will contain the list of prize drops that are/were in Started status on the date when the request is sent (even if the prize drop end date is on that day and the prize drop has already ended at the time the request is sent).</i> | Optional |

*Response parameters (JSON)*

| Name           | Type   | Description  |
|----------------|--------|--|
| error          | String | Error code.  |
| description    | String | Description of the error for troubleshooting.  |
| prizeDropsList | List   | List of active prize drops in which the casino participates. Description of objects in the list see below ( <i>prizeDropsList</i> type). |

*Type: prizeDropsList*

| Name        | Type   | Description                          |
|-------------|--------|--------------------------------------|
| prizeDropID | Number | Prize drop ID.                       |
| name        | String | Name of the prize drop (EN version). |

|                      |        |  |
|----------------------|--------|--|
| dataType             | String | Product vertical for which this promotion was created. Available values are: <ul style="list-style-type: none"> <li>• RNG – Slots &amp; More games.</li> <li>• LC – Live Games.</li> </ul>   |
| level                | String | Promotion level. Available values are: <ul style="list-style-type: none"> <li>• B - Bespoke,</li> <li>• N - Network.</li> </ul>  |
| startDate            | Date   | Date and time when the prize drop starts.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>   |
| endDate              | Date   | Date and time when the prize drop ends.<br><i>Date and time in the format yyyy-MM-dd HH:mm:ss.</i>   |
| prizePoolList        | List   | Prize drop total prize pool. Is sent in different currencies (according to those specified in the request). Includes just fixed prizes, without prizes with bet multiplier. Description of objects in the list see below ( <i>prizePoolList</i> type).                     |
| numberOfPrizes       | Number | Number of prizes configured for the prize drop.  |
| minBetList           | List   | Minimal bet to participate in the prize drop. Is sent in different currencies (according to those specified in request). Description of objects in the list see below ( <i>minBetList</i> type).   |
| minRounds            | Number | Minimal number of rounds to participate in the prize drop. Is returned if it's configured in the prize drop.   |
| minWageredAmountList | List   | Minimal total bet amount required for the players to participate in the prize drop. Scoring starts after the qualification is reached. Is returned if it's configured in the prize drop. Description of objects in the list see below ( <i>minWageredAmountList</i> type). |
| games                | String | List of the games participating in the prize drop. It contains gameld (game symbols), comma separated.<br><br><i>Example: "vs20cricksugar", "vs20olymp12gate", "vs20fruitsw188".</i>   |

*Type: prizePoolList*

| Name     | Type         | Description                                       |
|----------|--------------|---|
| currency | String       | Symbolic code of currency. Example: "USD", "EUR". |
| amount   | Number(15,2) | Prize pool amount.                                |

*Type: minBetList*

| Name     | Type         | Description                                       |
|----------|--------------|---|
| currency | String       | Symbolic code of currency. Example: "USD", "EUR". |
| amount   | Number(15,2) | Minimal bet amount.                               |

*Type: minWageredAmountList*

| Name     | Type         | Description                                       |
|----------|--------------|---|
| currency | String       | Symbolic code of currency. Example: "USD", "EUR". |
| amount   | Number(15,2) | Minimal wagered amount.                           |

### Example of HTTP request:

## 9.7 Prize Drop Prizes

*Request path: GET/prizedrops/prizes*

Prize Drop Prizes method provides a list of prizes configured in the prize drop, as well as the number of prizes remaining.

The list of prizes can only be retrieved for prize drops whose status is either 'Activated', 'Started' or 'Closed', but only if they ended no more than 31 days ago.

*Request parameters*

| Name  | Type   | Description   | Status   |
|---|--------|---|----------|
| secureLogin   | String | API user name (secureLogin value) for authentication in Pragmatic Play API. | Required |
| hash  | String | Hash code of request.   | Required |
| prizeDropID   | Number | ID of the prize drop for which prizes will be received.                     | Required |
| currencies  | String | ISO-4217 code currency. Currencies for amounts returned in feed.            | Optional |
| <i>If this parameter is missed in the request, then amounts are returned in the main prize drop currency.</i> |        |   |          |

*Response parameters (JSON)*

| Name        | Type   | Description  |
|-------------|--------|--|
| error       | String | Error code.  |
| description | String | Description of the error for troubleshooting.  |
| prizeList   | List   | List of prizes configured for the prize drop. Description of the objects in the list see below ( <i>prizeList</i> type). |

*Type: prizeList*

| Name                 | Type   | Description  |
|----------------------|--------|--|
| prizesNumber         | Number | Number of prizes configured for the specific prize.  |
| prizeType            | String | Gift that players will receive as a prize. Available values are: <ul style="list-style-type: none"> <li>Fixed Prize Amount,</li> <li>Text Prize,</li> <li>Bet Multiplier,</li> <li>Free Spins,</li> <li>Countdown FS,</li> <li>Instant Bonus.</li> </ul> |
| prizesLeft           | Number | Number of these prizes remaining (not yet won).  |
| amountInCurrencyList | List   | Prize amount that players within the 'Fixed Prize Amount' prize type will receive. This field is optional and will appear only if prizeType is 'Fixed Prize Amount'.   |
| text                 | String | Gift in the form of text gift that players within the 'Text Prize' prize type will receive. This field is optional and will appear only if prizeType is 'Text Prize'.  |
| multiplier           | Number | Gift in the form of bet multiplier that players within the 'Bet Multiplier' prize type will receive. This field is optional and will appear only if prizeType is 'Bet Multiplier'.   |
| spinsNumber          | Number | Gift in the form of free spins that players within the 'Free Spins' prize type will receive. This field is optional and will appear only if prizeType is 'Free Spins'.   |

seconds                      Number      Gift in the form of countdown free spins that players within the 'Countdown FS' prize type will receive. This field is optional and will appear only if prizeType is 'Countdown FS'.

*Type: amountInCurrencyList*

| Name     | Type         | Description  |
|----------|--------------|--|
| currency | String       | Symbolic code of currency. Example: "USD", "EUR".  |
| amount   | Number(15,2) | Amount (converted from coins) players within the Fixed Prize Amount prize type will receive. |

*Example of HTTP request:*

```
GET /IntegrationService/v3/http/prizedrops/prizes/?
secureLogin=username&prizeDropID=10&currencies=USD,EUR&hash=ece2b4cf65b47981ba7e7f81859d1a0f
HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

*Example of JSON response:*

```

## 9.8 Prize Drop Latest Wins

*Request path: GET/prizedrops/latestWins*

Prize Drop Latest Wins method provides a list of the latest X wins (awarded prizes) for a specific prize drop. Operator can specify exactly how many latest wins they want to receive, e.g., the latest 20 wins.

The list of the latest wins can only be retrieved for prize drops whose status is either 'Started' or 'Closed', but only if they ended no more than 24 hours ago.

*Request parameters*

| Name        | Type   | Description   | Status   |
|-------------|--------|---|----------|
| secureLogin | String | API user name (secureLogin value) for authentication in Pragmatic Play API.   | Required |
| hash        | String | Hash code of request.   | Required |
| prizeDropID | Number | ID of the prize drop for which the latest wins will be received.  | Required |
| currencies  | String | ISO-4217 code currency. Currencies for amounts returned in feed.<br><i>If this parameter is missed in the request, then amounts are returned in the main prize drop currency.</i> | Optional |
| listSize    | Number | Number of latest wins (max 300) in the prize drop that should be sent in response. If it's missed, 300 latest wins will be received.  | Optional |

*Response parameters (JSON)*

| Name           | Type   | Description  |
|----------------|--------|--|
| error          | String | Error code.  |
| description    | String | Description of the error for troubleshooting.  |
| latestWinsList | List   | List of latest wins in the prize drop. Wins will be sent in descending order (newest to oldest). Description of the objects in the list see below ( <i>latestWinsList</i> type). |

*Type: latestWinsList*

| Name              | Type       | Description   |
|-------------------|------------|---|
| playerID          | String     | Player's ID within operator's system. This parameter will be sent only if the player belongs to the casino (any of its shards) that sent the request.   |
| prizeDropPlayerID | Number(15) | Player's ID within the prize drop.  |
| roundID           | Number     | ID of the round in which the prize was won. This parameter will be sent only if the round belongs to the casino (any of its shards) that sent the request.  |
| gameID            | String     | Symbolic unique identifier of the game (within the Pragmatic Play system) in which the prize was won. <i>Example: vs50aladdin.</i>  |
| bet               | Map        | Player's bet in the round in which the prize was won, <b>except for Bet Multiplier prize.</b><br><br>When the bet is sent for the Bet Multiplier prize, it returns: <ul style="list-style-type: none"> <li>player's win bet – if the player's win bet doesn't exceed the bet</li> </ul> |

|           |        |  |
|-----------|--------|--|
|           |        | <p>limit configured* for Bet Multiplier prize;</p> <ul style="list-style-type: none"> <li>bet limit – if the player's win bet exceeds the bet limit configured* for Bet Multiplier prize.</li> </ul> <p>* if the bet limit is configured in PD.</p> <p>E.g., player's win bet is 50, but bet limit for Bet Multiplier prize is 20, then 20 will be returned in bet parameter (because it is used for prize calculation).</p> <p>Is sent as a map (key:value, where key - currency, value - amount) in different currencies, according to those specified in request.</p>   |
| prizeType | String | Type of prize the player won.  |
| value     | String | <p>Value of the prize depending on the prizeType. It may contain the value from:</p> <ul style="list-style-type: none"> <li>'Multiplier' field of the won prize if the type of the won prize is 'Bet Multiplier';</li> <li>'Text' field of the won prize if the type of the won prize is 'Text Prize';</li> <li>'Spins Number' field of the won prize, if the type of the won prize is 'Free Spins';</li> <li>'Seconds' field of the won prize if the type of the won prize is 'Countdown FS'.</li> </ul> <p>This field is optional and doesn't appear if the type of prize won is either 'Fixed Prize Amount' or 'Instant Bonus'.</p> |
| winAmount | Map    | <p>Amount won by the player in 'Fixed Prize Amount' OR 'Bet Multiplier' prize type. This field is optional and only appears if the type of prize won is either 'Fixed Prize Amount' or 'Bet Multiplier'.</p> <p>Is sent as a map (key:value, where key - currency, value - amount) in different currencies, according to those specified in request.</p>   |

**Example of HTTP request:**

```

## 9.9 Promo Details

*Request path: GET /promo/details/*

This API method is responsible for providing additional promotion details, such as portfolio type, promotion level etc.

### Recommendations for API request frequency limits:

It is recommended that the casino operator request this method once for each tournament ID, as the returned data does not change.

It is also recommended to use this API method for different tournament IDs no more often than one request per 30 minutes.

### Request parameters

| Name              | Description  | Status   |
|-------------------|--|----------|
| secureLogin       | User name for authentication in the Casino Game API service  | Required |
| hash              | Hash code  | Required |
| promoCampaignID   | Id of the promotional campaign.  | Required |
| promoCampaignType | Type of the promotional campaign. Available values are:<br>R – Prize Drop (Cash drop promotion)<br>T – Tournament<br>CB – Cashback | Required |

### Response parameters (JSON)

| Name             | Type   | Description  |
|------------------|--------|--|
| error            | Number | Error code   |
| description      | String | Description of the error for troubleshooting   |
| details          | Object | Promotion details  |
| details.name     | String | Name of the tournament   |
| details.level    | String | Promotion level. There should be 2 possible values:<br>B - bespoke, meaning a promo is created and managed by the operator. The default value.<br>N - network, meaning promo is created and controlled by Pragmatic Play |
| details.dataType | String | Portfolio type. Possible values are LC for Live Casino or RNG for main portfolio games (video slots, classic slots etc.)   |

### Example of HTTP request:

```
GET /IntegrationService/v3/http/promo/details/?secureLogin=login&hash=e3dd118e815f87df53ce5d-b475e539c8&promoCampaignID=5432346234&promoCampaignType=T 12:00:00 HTTP/1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

### Example of JSON response:

```
{
  "error":0,"description":"OK","details":{"name":"promo1","level":"B","dataType":"RNG"}
}
```

## Error codes

Below table contains the error HTTP statuses that should be returned, in case of issues on request processing

| HTTP status | Description  |
|-------------|--|
| 0           | OK   |
| 1           | Authentication error. Incorrect secure login and secure password combination |
| 2           | Empty mandatory field  |
| 3           | Invalid parameter value  |
| 7           | Promotion not found  |
| 99          | Request limit has been exceeded. Try later please..                          |
| 100         | Internal error. Try later please   |

## X. Business Statistics API

Statistics API is used for receiving business statistics reports from Pragmatic Play about play activity, based on needed options.

URL of the HTTP service will be provided by Pragmatic Play for the production and test environments and looks like:  
<https://{API service domain}/IntegrationService/v3/StatisticsAPI/players/daily/totals/>

Integration simple HTTP Service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

### Hash calculation

Hash code is calculated with following formula:

From request GET parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them (if the value is not null or empty) in key1=value1&key2=value2.
3. Append secret key, e.g.: key1=value1&key2=value2SECRET.
4. Calculate the hash by using MD5.

### 10.2 Players daily report

Players Daily report provides aggregated data grouped by player and optionally by game for. Player statistics is accumulated by day based on Pragmatic Play server time zone. Operator can request data for a certain day only (in the past).

Operator can use this method for cross checking their data. Only completed game rounds are included in the response. If a game round was started in one day and finished in another day, its results will be included in the daily totals for the day it was finished.

*Request path: GET /StatisticsAPI/players/daily/totals/*

*Request parameters*

| Name        | Type   | Description  | Status   |
|-------------|--------|--|----------|
| secureLogin | String | User name for authentication in the Report API service.  | Required |
| hash        | String | Hash code of the request.  | Required |
| date        | String | Date for which the data should be loaded (format YYYY-MM-DD)   | Required |
| options     | String | List of settings. By including it, operator can get an additional totals or group by additional parameters.<br>Possible values are:<br><i>groupByGame</i> – if it is required to receive data per player per game.<br><i>includeCanceledBets</i> – exclude canceled rounds from totalBet amount. | Optional |

|          |           |  |          |
|----------|-----------|--|----------|
| dataType | String(3) | Type of portfolio, indicates which portfolio Data Feeds should be returned<br>Available options:<br>RNG - Main portfolio games (video slots, classic slots etc.)<br>LC - Live Casino portfolio<br>VSB - Virtual sports betting portfolio<br><b>Important!</b><br><u>In cases where dataType is included in request, Data Feeds for relevant portfolio will be returned only</u><br><u>When there is no dataType in request, will be returned Data Feeds for RNG only</u> | dataType |
|----------|-----------|--|----------|

*Response parameters (CSV)*

| Name                | Type         | Description  |
|---------------------|--------------|--|
| playerID            | String       | Id of the player within the Casino Operator's system   |
| gameID              | String       | Symbolic unique identifier of the game within the Pragmatic Play system. <i>Example: vs25queenofgold, vs50aladdin, cs5triple8gold, bjma, rla, vpa</i><br>In case options parameter is set as groupByGame |
| totalRounds         | Number       | Total number of game rounds completed during the reporting period, does not include free spins received as promo.  |
| totalFreeSpinRounds | Number       | Total number of free spin rounds (in-game feature) completed during reporting period.  |
| totalBet            | Double(15,2) | Total bets made by player during reporting period. The values are in player's currency.  |
| totalWin            | Double(15,2) | Total wins won by player during reporting period. The values are in player's currency.   |
| currency            | String       | Player's currency, 3 letter ISO 4217 code. Example: "USD"  |

*Example of HTTP request:*

```
GET /IntegrationService/v3/StatisticsAPI/players/daily/totals/?
secureLogin=login&hash=34642b49d19990ff97a13ed6384554e4&date=2020-03-04&options=groupByGame HTTP/
1.1
Host: api.prerelease-env.biz
Cache-Control: no-cache
```

*Example of response:*

```
playerID,gameID,totalRounds,totalFreeSpinRounds,totalBet,totalWin,currency
player1 ,vs10bookoftut,5,0,10.00,0.00,USD
player2,vs25mmouse,11,0,22.00,1.60,USD
```

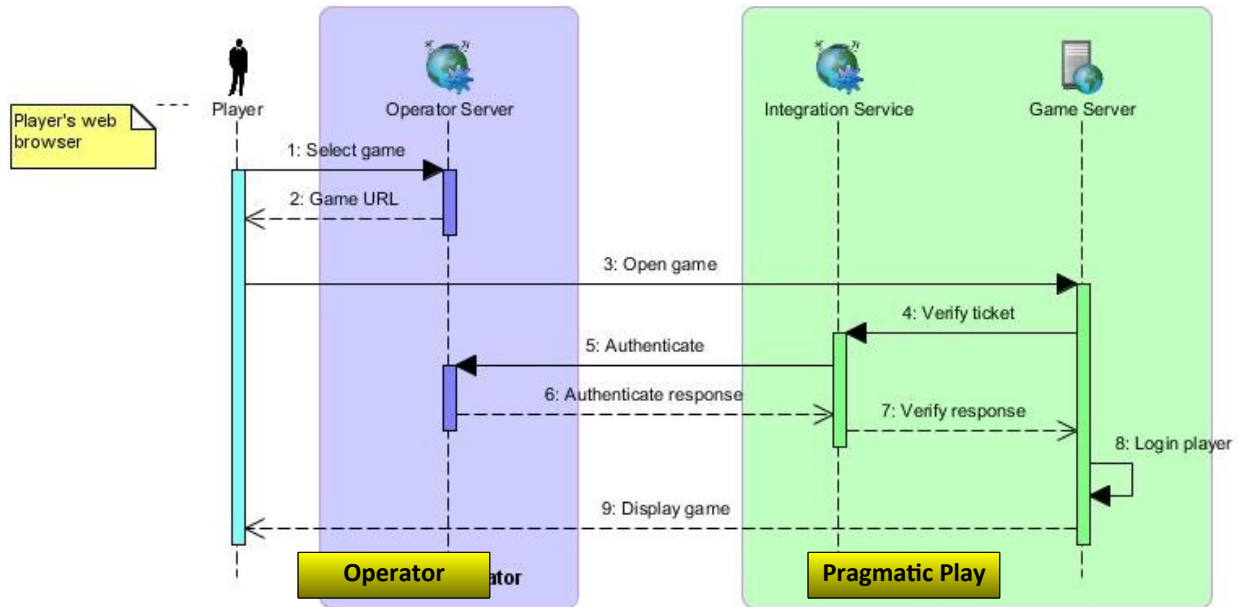

## 10.3 Error codes

Below table contains the error HTTP statuses that should be returned, in case of issues on request processing

| HTTP status | Description   |
|-------------|---|
| 400         | Bad request. Is returned in cases when some of required parameters are not present, or empty                            |
| 401         | Unauthorized - Incorrect secure login or calculated hash  |
| 500         | Internal error. Is returned when there are some problems, or data cannot be returned because of invalid date in request |

## XI. Diagrams

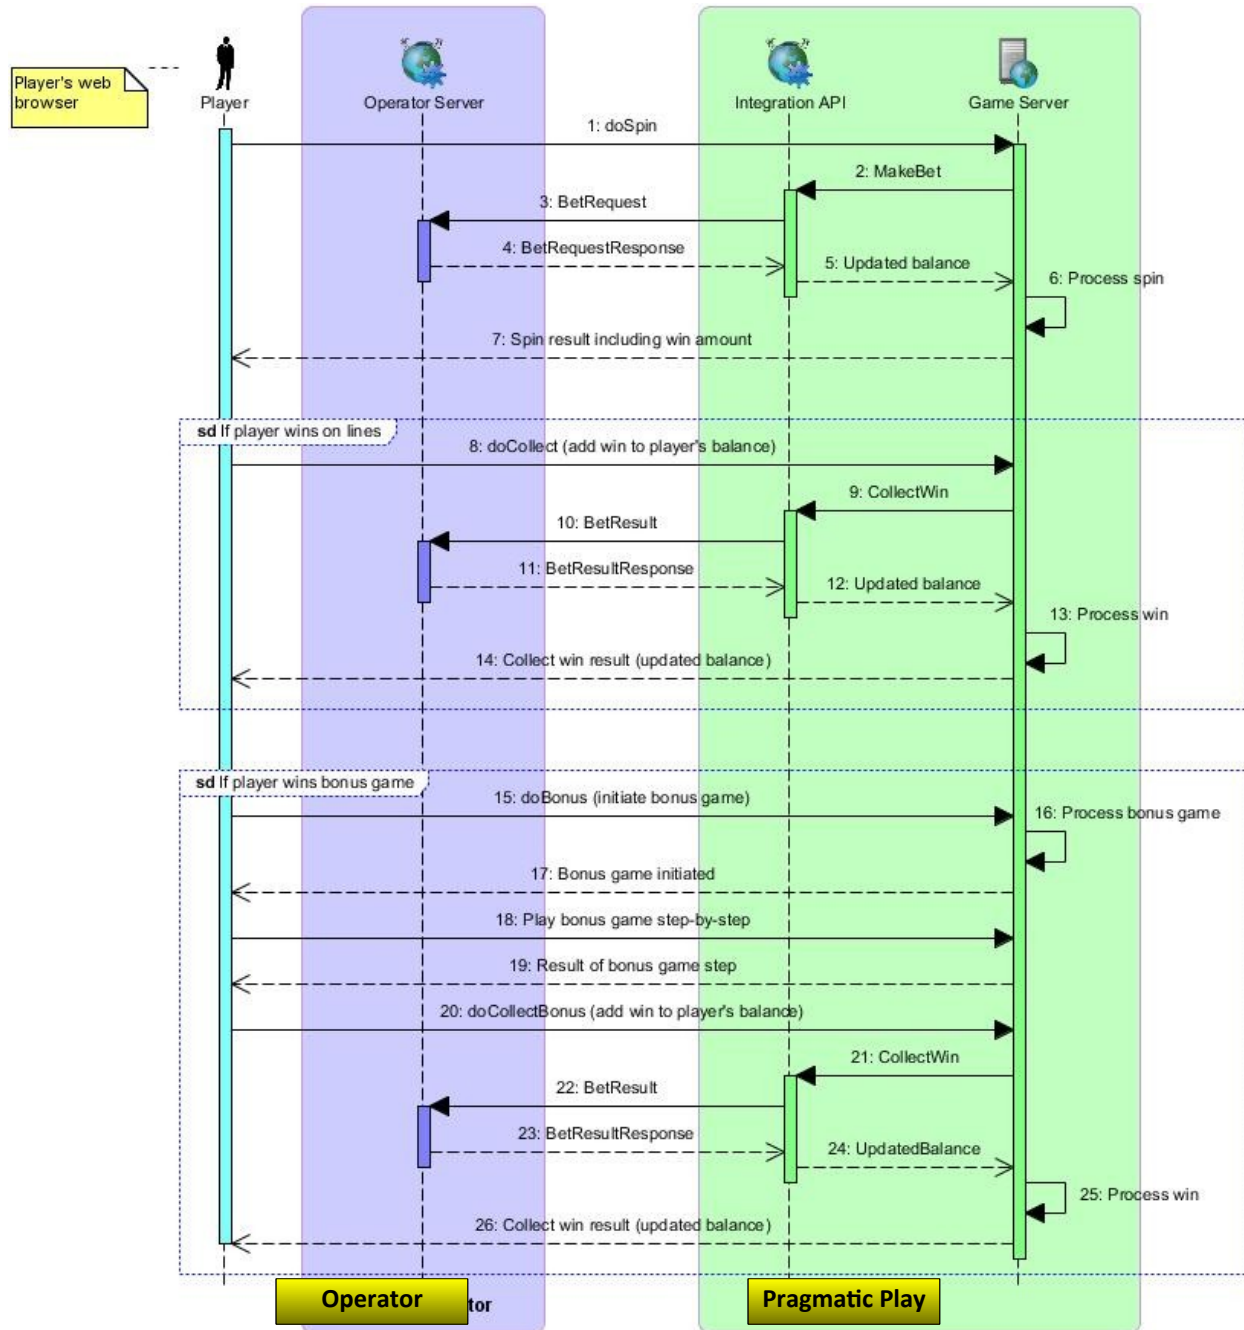

### 11.1 Flow diagram of opening casino game for Seamless Wallet API

#### Flow details

1. Player selects a game, which is served by Pragmatic Play. Specific one-time password is created on Operator side. This password should uniquely identify the player within Operator system.
2. Operator, with the help of JS library provided by Pragmatic Play, checks if selected game can be launched on the player's OS and return URL of the game to the player browser. If the game cannot be launched then appropriate message will be shown to the player.
3. URL of the game is loading in player browser for redirecting player to Pragmatic Play game server.
4. Game Server verifies one-time password received with URL.
5. Pragmatic Play Integration Service calls Operator server to authenticate player using received token.
6. Operator authenticates the player. If player is authenticated Operator returns player id within Operator system and player current balance.
7. Game Server receives a result of player authentication. If authentication is not successful a player will receive an error message.
8. Game Server finds player id in the database or creates a new player account
9. The game with all required data is opened for player.

## 11.2 Flow diagram of playing casino game Seamless Wallet API

### *Flow details*

The game flow is shown in the example of the slot.

1. Player clicks Spin button on the game screen, and game client sends doSpin request to the Pragmatic Play Game server.
2. Game server calls Pragmatic Play Integration service to withdraw money from the player balance.
3. Integration service sends Bet request to the Operator server. If the request cannot be handled by Operator due to connection problem, Pragmatic Play server will repeat the request 3 times. After that Refund request will be sent to the Operator server for cancelling bet until response from Operator server is received.
4. Operator verifies that player has enough funds in the wallet to make a bet, subtracts requested amount from the balance and returns updated player balance in the response. If there is not enough money in the wallet, Operator returns an error.
5. Pragmatic Play Integration service returns updated balance to the game server.
6. Game server processes spin - gets new combination on the reels, checks combinations that trigger free spins or bonus game feature, calculates win amount, etc.
7. Game server returns response to the game client. Response may contain updated reels, information about winning lines, triggered features and win amount.
8. If player has a win on lines game client sends doCollect request to the Game server to collect player's winnings.
9. Game server calls Pragmatic Play Integration service to add win amount to the player balance.
10. Integration service calls Operator server sending BetResult request. If request cannot be handled by Operator due to connection problem, Pragmatic Play server will repeat the request until it receives a response from Operator server.
11. Operator adds money to player's wallet and returns updated player balance.
12. Pragmatic Play Integration service returns updated balance to the Game server.
13. Game server collects player's win.
14. Game server returns response to the game client containing updated player balance.
15. If bonus game feature is triggered game client sends doBonus request to the Game server.
16. Game server starts bonus game feature.
17. Game server returns response with all information that is necessary for the game client to play bonus game.
18. Game client sends a request to the game server on every step of the bonus game.
19. Game server handles request and returns response with the result of current step.
20. When bonus game is over game client sends doCollectBonus request to the Game server.
21. Game server calls Pragmatic Play Integration service to add bonus game win amount to the player balance.
22. Integration service calls Operator server, sending BetResult request. If request cannot be handled by Operator due to connection problem, Pragmatic Play server will repeat request until it receives a response from Operator server.
23. Operator adds money to player's wallet and returns updated player balance.
24. Pragmatic Play Integration service returns updated balance to the Game server.
25. Game server processes bonus game win.
26. Game server returns response to the game client containing updated player balance.

## XII. Reconciliation

### 12.1 Reconciliation process

If a request times out because of internet connection problems, or contains relevant error code (3.17 Error codes), then the Pragmatic Play system will follow a process described below, to reconcile the action.

For the cases where Operator receives retry API calls within reconciliation process, actual player's balance must be returned in response

#### Bet transaction

The Bet request will be retried 2 (two) times with a delay of 5 seconds between attempts.

If a request is still not processed after the second try, Pragmatic Play will initiate the Refund request to cancel this single bet on the Operator side.

#### Refund transaction

Refund request will be added to a Transaction queue and an error message will be displayed to the player on the game interface. The game client should be closed. The reconciliation mechanism starts from there.

Operator will accept Refund requests that run independently of the game session in order to ensure the two systems are kept in sync.

Such a request can be sent if Pragmatic Play has an unknown response on the Refund request on its side because of a timeout or relevant error code (so it will try to run it in the background until the Operator response will not reach Pragmatic Play).

Operator will return a successful response on the Refund request even if the transaction has been canceled in the past and does not need to be canceled again or even if Bet has not reached Operator system because of timeouts.

#### Winning transactions

The BetResult/BonusWin/JackpotWin/Adjustment requests will be retried 2 (two) times with a delay of 5 seconds between attempts.

If a request is still not processed after the second try then it will be added to the Transaction queue for reconciliation. Game round result will be displayed to the player on the game interface.

BetResult/BonusWin/JackpotWin/Adjustment requests will be added to the Transaction queue and sent independently of the game session, according to the Reconciliation mechanism.

#### PromoWin

The PromoWin requests will be retried in the similar way as described calls above but with a delay of 30 minutes after the tournament is going to be finished.

#### EndRound

The EndRound request will be added to the Transaction queue once the game server determines a game round is over. The reconciliation mechanism starts from there.

Operator will accept EndRound requests that run independently of the game session in order to ensure the two systems are kept in sync. Repeated EndRound request can be sent only if the Pragmatic Play system has an unknown status on its side because of a timeout or special error code on the EndRound call, so it will try to run it in the background until the Operator response will not reach Pragmatic Play.

## 12.2 Reconciliation mechanism

The reconciliation mechanism ensures the two systems (Game Platform and Casino Operator) are kept in sync.

From the Pragmatic Play system perspective, the Transaction queue is a table within the database that records any Refund, BetResult/BonusWin/JackpotWin/PromoWin/Adjustment and EndRound requests that timed out.

The Pragmatic Play system put in place an automated process (cron job) that reads the Transaction queue table from the database and runs the requests within the queue.

After 24 hours, the requests that are still unsuccessful will be marked for manual reconciliation.

## XIII. Reality Check

### 13.1 Server side implementation

#### Reality Check Warning

One of the regulatory requirement is to notify the player with a certain frequency regarding the actual amount of time the player spends in the game. In UK regulation the user set the notification frequency during the login via the portal. In the next money transaction call (bet or win) after the reality check interval expiration will result in an appropriate reality check error. The error should be translated to an appropriate warning popup displayed to the player.

#### *Reality check error*

| Error code | Description           | Additional data  |
|------------|-----------------------|--|
| 210        | Reality check warning | <ul style="list-style-type: none"><li>rcRegulation – Regulator. Possible values are: UK, Malta</li><li>rcInterval – Reality check interval in minutes</li><li>rcTimeInSession – Total session time in minutes</li><li>rcNetGain – Status of player's profit/loss over the session time</li></ul> |

#### *Example of reality check error response:*

```
{
  "error": 210,
  "description": "Reality check warning",
  "details": {
    "rcRegulation": "Malta",
    "rcInterval": 20,
    "rcTimeInSession": 60,
    "rcNetGain": 23.05
  }
}
```

## Reality Check Response

*Request path: POST /realityCheck/response/*

Once user have received reality check error, they have two choices – continue to play or stop playing and logout. Pragmatic Play will send the Reality Check Response request, in order to notify the Operator about player's choice. Operator should resume the player's session, reset the reality check counter and continue handling money transactions.

If player have chosen to stop playing and there is a winning requests that were refused by Operator due to the reality check warning, those requests must be properly processed on both sides to allow player to get their winnings: Pragmatic Play will re-send winning requests and Operator must add money to player's balance.

*Request parameters*

| Name       | Description  | Status   |
|------------|--|----------|
| providerId | Pragmatic Play identifier for authentication in Casino Operator's system.<br>May be provided by Casino Operator. Otherwise default value is used.  | Required |
| playerId   | Identifier of the player within the Casino Operator system.  | Required |
| userAction | Represent the user response to reality check dialog.<br>Can be one of the 2 options below: <ul style="list-style-type: none"> <li>○ <b>Reset</b> – Continue to play and reset the reality check counter</li> <li>○ <b>Stop</b> – Stop playing. Please note, in such case all active game windows should be terminated</li> </ul> | Required |
| hash       | Hash code of the request.  | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST /realityCheck/response/ HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache
```

```
playerId=6&userAction=Reset&providerId=PragmaticPlay&hash=53ff1b78529a7b97fca9026d9c2dc788
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "Success"
}
```

## 13.2 Client side implementation

The game client should calculate a time the player has spent in the game and display a reality check message every X minutes, which will inform the player how long they are playing the game. To activate reality check feature in the game client an Operator should provide the Pragmatic Play game launcher with the following parameters:

- rci – the reality check interval, in minutes. This is the interval for reality check messages to be shown to the player during game play
- rce – the reality check elapsed time, in minutes. This is optional parameter, which indicates already elapsed minutes on another games. If this parameter is sent by Operator, the first time RC message will appear in rci – rce minutes after game opening
- rcHistoryUrl – a link to the player's game history. This is optional parameter. If Operator send the rcHistoryUrl parameter, game client will add the "History" button to the reality check message. There are two options here:
  - Operator may provide a URL to the page on their side. In this case rcHistoryUrl should contain a link to Operator's page. For example: rcHistoryUrl=http://casinosite.com/history/
  - Game client can show inbuilt game history, provided by Pragmatic Play. In this case Operator should send the predefined value: rcHistoryUrl=ingame
- rcCloseUrl – a link to the page on the Operator's website, to which the player will be redirected if they choose to close the game. This parameter is optional. The "Close" button appears on the reality check message only if Operator sends the URL

The "Continue" button always appears on the reality check message. This button removes the reality check message and resumes the game screen.

## XIV. Custom messages

Seamless Wallet API responses can optionally contain one or more messages that will be shown in the player's game client. This optional feature initially is designed for UKGC CMA support, but operators can also use it for their needs.

Upon receiving a message, game client will display information to the player in order to inform him or her about a specific event, and optionally request a user response.

All text that is sent inside a message must be translated to the player's language.

### 14.1 Custom messages syntax

A custom message is an optional "message" element added to API responses. There can be zero or more "message" elements per response:

```
{...
  "messageTriggers": [
    {
      "title": "Starting to use bonus funds",
      "text": "You are starting play with bonus funds.\nFrom this point it possible that won funds may have to be\nre-bet many times before they can be withdrawn from your account.\nPlease click Bonus Details for further details.",
      "nonIntrusive": false,
      "options": [
        {
          "action": "continue",
          "label": "OK"
        },
        {
          "action": "link",
          "label": "Bonus Details",
          "linkType": "redirect",
          "url": " https://www.casino.com/bonus/details",
        }
      ]
    }
  ]
}
```

Each item in the "messageTriggers" array may contain elements `title`, `text`, `nonIntrusive` and `options`.

The `title` element contains the title of the message box, which must be in one short line of no more than 60 characters.

The `text` specifies the message box text and may contain multiple lines. When specifying a forced line break the symbol used is `\n`. The max length of the text is 300 characters.

If `nonIntrusive` is specified and true, the message can be shown in a non-modal, non-intrusive fashion. Default value: false.

The `options` array can contain one or more elements. Each option always has `action` and `label` elements and may contain optional `url` element for redirect or Ajax call and a `linkType` specifying how the request should be sent to the URL if it is specified. Options and link types are specified below.

The options order specifies the order in which the options shall appear in the message box.

## 14.2 Action types

Each `option` element inside a message has a type that specifies the expected behavior when that option is selected. These are the possible values:

| Type     | Use case             | Description   |
|----------|----------------------|---|
| quit     | Quit the game        | Close the game. Acts the same as pressing Home button.  |
| continue | Continue the game    | Close the message box and resume the game.  |
| history  | Game history/Details | Close the message box and open the history URL if it was specified during game launch. If history URL was not specified please use the "link" type. |
| link     |                      | Close the message box and open or send Ajax request to the URL indicated in the "action" parameter.   |

## 14.3 Link types

The action element inside an option specifies the expected behavior when that option is selected. The default value is redirect. These are the possible values:

| Type         | Use case          | Description  |
|--------------|-------------------|--|
| redirect     | Open a page       | Redirects the player to the URL specified for the "link" option.   |
| open         | Open a new tab    | Opens a new/blank tab in the browser, with the link specified for the action.  |
| ajax         | Notify and resume | An Ajax request is sent to the URL and immediately let the player continue with the game flow.   |
| ajaxResponse | Notify and wait   | An Ajax request is sent to the URL and wait until "successful json response" is received. Only then continue with the game flow.   |
| notify       | Notify and resume | A JavaScript event should be sent to parent window as <code>postMessage()</code> . For example, if the game is opened in iframe and player wants to go back to the lobby JS notification to the parent page should be used instead of redirect, which will cause opening the lobby page inside iframe. |

## 14.4 Custom messages API

### Response parameters

| Name            | Type          | Description  | Status   |
|-----------------|---------------|--|----------|
| messageTriggers | Array         | Messages that will be displayed in the player's game client.   | Optional |
| <b>message</b>  | <b>Object</b> |  |          |
| title           | String (60)   | Title of the message box.  | Optional |
| text            | String (300)  | Text to be shown in the message box.   | Required |
| nonIntrusive    | Boolean       | If specified and true, the message can be shown in a non-modal, non-intrusive fashion. Default value: false.   | Optional |
| options         | Array         | List of options, should specify buttons shown in the message box. At least one option should be defined. In the simplest case, it will be the OK button, which closes the box.                           | Optional |
| <b>option</b>   | <b>Object</b> |  |          |
| action          | String (10)   | Type of the option. Available types are: quit, continue, history, link. Detailed description of each action can be found in Action types section above.  | Required |
| label           | String (20)   | Text on the button in the message box to be shown to the player.   | Required |
| linkType        | String (10)   | Type of the link. Relevant only for actions of "link" type. Available values are: redirect, ajax, ajaxResponse, notify. Detailed description of each link type can be found in Link types section above. | Optional |
| url             | String (100)  | URL of the link. Relevant only for actions of "link" type.   | Optional |

## XV. Regulated Markets

This section represents integration API and other useful materials important for certain regulated markets.

### 15.1 Responsible gaming - Sweden

For Sweden there are four items that needs additional attention in order to comply with Swedish regulations.

#### Login time

Players should at all-time be able to see login time, this includes the mobile client as well. For this purpose, PragmaticPlay takes an addition game launch parameter:

**elapsedTime** - Current elapsed session time, the value is in seconds. If present the elapsed time will be displayed in the game client.

#### Links and logos to self-assessment tests

Player should also at all-time be able to see three logos with links at the top of the client in a locked field. PragmaticPlay have extended our game launcher to take three additional launch parameters.

- **pauseplayUrl** – encoded url to the “Spelpaus”
- **selftestUrl** – encoded url to the “Självtest”
- **playlimitUrl** – encoded url to the “Spelgränser”

#### Set player's country

Operator needs to set jurisdiction on PragmaticPlay authenticate call, the jurisdiction parameter is used for reporting and Game Client behavior. For Sweden the jurisdiction is “SE”.

#### Displaying of totals

To display in game interface total amounts of Bet, Win or Loss during player's game session, operator should use section **XIII Custom messages** of current document.

### 15.2 Checksums API

Using this method Casino Operator will get the list containing all critical files with their checksums to be verified and sent to the Regulator.

All responses should be in JSON format.

URL of the API for regulated markets will be provided by Pragmatic Play for the production and test environments and looks like:

*`https://{API service domain}/IntegrationService/v3/http/RegulationAPI/`*

All HTTP services are securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

*Request path: POST /checksums/*

#### *Request parameters*

| Name         | Description  | Status   |
|--------------|--|----------|
| secureLogin  | User name for authentication in the Casino Game API service  | Required |
| jurisdiction | One or more jurisdiction codes (delimited with comma) to filter the result. May be omitted to get all available jurisdictions  | Optional |
| dataType     | Type of portfolio, indicates which portfolio checksums should be returned<br>Available options:<br>RNG - Main portfolio games (video slots, classic slots etc.)<br>LC - Live Casino portfolio<br>VSB - Virtual sports betting portfolio<br><br><b>Important!</b><br><u>In cases where dataType is included in request, checksums for relevant portfolio will be returned only</u><br><u>When there is no dataType in request, will be returned checksums for RNG only</u>  | Optional |
| options      | List of settings. By including it, operator can get additional information about checksums. Possible values are:<br><ul style="list-style-type: none"> <li>gameRelatedOnly</li> </ul> <b>Important!</b><br>In case the operator sends this parameter the system will return only game related files:<br><ul style="list-style-type: none"> <li>game-engine</li> <li>game-configurations</li> <li>rng.jar</li> <li>gs2c-random</li> </ul><br>*Platform files (config-tool-1.0.6.jar and check_files_v7.sh ) will not be received. | Optional |
| hash         | Hash code of the request.  | Required |

#### *Response parameters*

| Name        | Type        | Description  |
|-------------|-------------|--|
| checksums   | List        | The list of filenames and checksums for every critical file.               |
| error       | String(10)  | 0 - if the request was successfully processed or error code in other case. |
| description | String(250) | Description of the error for troubleshooting purposes.                     |

*In case Casino Operator needs full path to critical files to be returned in response (for example if this is required by regulation market), they should ask the Pragmatic Play's Technical Support for additional configuration.*

*Example of response with full path to critical files can be found below*

#### *Example of HTTP request:*

POST /IntegrationService/v3/http/RegulationAPI/checksums/ HTTP/1.1

Host: api.prerelease-env.biz

Content-Type: application/x-www-form-urlencoded

secureLogin=ext\_test1&hash=3b4d0b1b84bf4eaa694acb0657a922f3&jurisdiction=IT, LV

***Example of JSON response with no path to critical files:***

```

"checksums": [
  {
    "files": [
      {
        "checksum": "3aa16f6a16adadd8065aa35f4a5ac9877c4408e6",
        "fileName": "vs50aladdin_cv2-88.01_.hs",

```

## 15.3 Launch games from internal lobby for Italian regulated market

Since Italian regulator requires operators to ask players for funds that they want to spend playing a certain game, a game provider, who offer an in-game mini lobby, have to implement the same in their games.

There are two things that are important with this regard, once player has chosen a game:

1. A total balance should be shown to the player in a pop up, in which he will enter the amount he wants to spend in this game
2. The current game session must be closed and a new game session opened on operator's side and communicated to AAMS.

Also, in order to display current AAMS Ticket and AAMS Sessionid in game client, operator should send following additional parameters in authenticate response (in extraInfo response parameter body):

- "aamsTicket": "someaamsticketvalue";
- "aamsSessionId": "someaamssessionidvalue"

PragmaticPlay offer mini lobby for Live games and slots. Both types of games can be enhanced to support Italian requirements. To make it possible, the following changes to PP Native Wallet API are proposed:

1. New "totalBalance" parameter will be added to the response on both /balance and /getBalancePerGame calls (depending on which one is used by operator in existing integration). The parameter is optional, should be sent by operator for Italy but can be sent for all players as well.
2. The following parameters will be sent to Authenticate request, which will inform operator that a new game is about to be opened from in-game lobby:
  - launchingType - indicates the way the game is being launched. Possible values are: "N" - normally (by operator), "L" - from in-game lobby. The default value is "N"
  - gameId- id of the game being launched
  - chosenBalance - amount of money player wants to spend in the game
  - previousToken - value if the token that was received from operator for the game that should be closed (corresponds to the current opened game session on operator's side)
3. Parameter "token" will be empty if a new game is being launched from in-game mini lobby. Token for this game should be generated by operator and returned in the response

When operator gets an Authentication call with launchingType=L, they should do the following:

1. Close the current game session identified by previousToken parameter in operator's system
2. Close AAMS ticket for that game session
3. Open a new game session in operator's system
4. Open a new ticket in AAMS
5. Return new token, player id, his balance, etc. in the response as usually

## 15.4 Portuguese Regulated Market - Slot Machine and RNG Table Game Reporting

This is a simple API for Operators to connect to the Pragmatic Play gaming system. API is an HTTP listener, which listens POST requests coming to an URL with the request mappings below.

URL of the HTTP service will be provided by Pragmatic Play for the production and test environments and looks like: *https://{API service domain}/RegulationService/*

The service is securely protected, hence please be sure:

- player's browser (end) must NOT be used as initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

### Introduction

This document describes the API, which Pragmatic Play has created for Operators in Portugal, for slot machines and RNG table games reporting according to SRIJ requirements providing the way of getting the string needed to fill the smResult field present in the AJOG files.

#### API Architecture

The communication interface between the Operator and the Pragmatic Play is performed by server-to-server requests via HTTPS (using POST method). Responses are sent as JSON. The structure and the elements information are defined in this section.

#### Requests Authentication

All requests that are sent to the Pragmatic Play API should be authenticated. Each request contains Secure Login as a request parameter and a Password as a part of the hash code calculated based on the request parameters. Pragmatic Play will supply the Operator with dedicated credentials.

#### Error Handling

If the ErrorCode parameter equals to 0 or not exist, then the response was processed successfully with no error. In Case the ErrorCode > 0, it means that the response was processed with an error.

### Slot Machine and RNG Table Game Reporting API

#### Hash calculation

Hash code is calculated with the following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

1. Sort all parameter by keys in alphabetical order.
2. Append them (if the value is not null or empty) in key1=value1&key2=value2.
3. Append secret key, e.g.: key1=value1&key2=value2SECRET.
4. Calculate the hash by using MD5.
5. Compare with hash parameter. In the case of failure Casino Operator should send the error code 1.

Credentials for connecting to Pragmatic Play service, for integration and production environments, will be provided by our Integration team by Operator's request.

## API specification

*Request path: POST /ReportingAPI/Portugal/smResult/*

Using this method Operator can get a details of slot machine or RNG table game results, for particular game round, which then can be sent to the Regulator in the smResult field.

**Important:** Only completed game rounds that have been finished by players are allowed. The smResult report cannot be generated for incomplete game rounds. It is recommended to wait at least 5 minutes before calling this API method after the operator receives the endRound request.

### Request parameters

| Name        | Type   | Description   | Status   |
|-------------|--------|---|----------|
| secureLogin | String | User name for authentication in the Pragmatic Play service. The value will be provided by Pragmatic Play. | Required |
| roundId     | Long   | Id of the round, which is finished by a player.   | Required |
| hash        | String | Hash code of the request  | Required |

### Response parameters

| Name     | Description   |
|----------|---|
| smResult | The details of slot machine or RNG table game result.   |
| error    | The error code and description for troubleshooting. This field will appear only in case of error. Successful responses should not contain it. |

### Example of HTTP request:

```
POST /RegulationService/ReportingAPI/Portugal/smResult/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&roundId=123654987&hash=438fea0a68a0e9ab49df756cc20eda8f
```

### Example of the successful response:

```
{
  "smResult": {
    "0:5;8;1;3;1#10;10;11;11;11#4;2;10;9;4#R#10#H10#122#MV#0.01#MT#1#R#10#H10#112#MV#0.01#MT#1#MG#0.08#": {
      "betMultiplier": 20,
      "error": {
        "code": 0,
        "description": "OK"
      }
    }
  }
}
```

### Example of error response:

```
{
  "smResult": null,
  "betMultiplier": null,
  "error": {
    "code": 2,
    "description": "Game round is not found."
  }
}
```

## Error codes

Below table contains the error codes that the Pragmatic Play system will return in the response to API calls.

| Code | Description   |
|------|---|
| 1    | Authentication failed. Incorrect secure login and secure password combination (will be returned also if the hash code validation is failed) |
| 2    | Game round is not found.  |
| 3    | Validation failed. One or several input parameters is not set or set incorrectly.   |
| 10   | Incomplete game. Game round is not finished by the player.  |
| 100  | Internal server error.  |

## Examples

This section provides the examples of smResult field generated for various combinations. The content of the field generated by the service was formatted for easier understanding.

### Paying symbol

The symbol that pays itself and is not required to be on a payline.

```
0: 1;10;8;10;9# //Game screen
12;11;5;3;12#
8;4;1;6;1#
R#1#P1#0;12;14#MV#8.75#MT#2# //Symbol 1 paying 8.75 and its positions
```

### Winning in bonus game

Bonus game (BG) was triggered by a scatter, which is not required to be on a payline.

```
0: 3;13;13;13;3# //Game screen
3;13;3;13;3#
3;13;13;13;13#
3;3;13;13;13#
R#3#P3#0;5;10;15#MV#5.5#MT#2# //Symbol 3 triggered the BG, its positions and BG win amount
```

### Hidden paying symbol

The symbol is paying, and it is hidden and not shown to the player explicitly because it was replaced on the game screen by an expanding symbol.

```
0: 12;12;2;9;2# //Game screen
9;9;2;10;9#
2;2;2;2;11#
R#9#H9#111#MV#0.25#MT#2# //Winning lines begin
R#12#H12#000#MV#0.15#MT#2#
R#2#H2#2222#MV#2.5#MT#2#
R#9#H9#210#MV#0.25#MT#2#
R#9#H9#12221#MV#2.5#MT#2#
R#12#H12#0012#MV#0.5#MT#2#
R#9#H9#22100#MV#2.5#MT#2#R
#9#H9#12101#MV#2.5#MT#2#
R#9#H9#211#MV#0.25#MT#2#
R#9#H9#212#MV#0.25#MT#2#
R#9#H9#110#MV#0.25#MT#2#
R#9#H9#112#MV#0.25#MT#2#
R#12#H12#002#MV#0.15#MT#2#
R#2#H2#2202#MV#2.5#MT#2#
R#12#H12#02220#MV#1.25#MT#2#
R#12#H12#200#MV#0.15#MT#2#
R#9#H9#12021#MV#2.5#MT#2#
R#12#H12#02020#MV#1.25#MT#2#
R#12#H12#202#MV#0.15#MT#2# //Winning lines end
R#1#P1#2;4;10#MV#1.25#MT#2# //Symbol 1 pays 1.25 but its positions do not match game screen
```

## 15.5 South Africa RoundDetails

### API specification

*Request path: POST /regulation/SA/roundDetails*

SA RoundDetails method is optional and should be implemented only in the case when Operator want to receive additional SA specific round details. This method is not available by default.

In case Casino Operator needs to enable this method, they should ask the Pragmatic Play's Technical Support for additional configuration.

*Request parameters*

| Name           | Description  | Status   |
|----------------|--|----------|
| hash           | Hash code of the request.  | Required |
| roundId        | ID of the finished game round  | Required |
| providerId     | Game provider identifier   | Required |
| freeSpinsCount | Number of free spins played within the round (Zero if no FS is played)         | Required |
| freeSpinsWin   | Total amount of winning which is won from FS( Zero if there no winnings in FS) | Required |

*Response parameters*

| Name        | Description                                  |
|-------------|--|
| error       | Error code                                   |
| description | Description of the error for troubleshooting |

*Example of HTTP request:*

```
POST /regulation/SA/roundDetails HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

roundid=421&freeSpinsCount=10&freeSpinsWin=10.11&providerId=pragmaticplay&hash=b4672931ee1d78e4022-faaadf58e37db
```

*Example of JSON response:*

Example of JSON response:

```
{
  "error": 0, "description": "Success"
}
```

### Error codes

Below table contains the error codes that the Pragmatic Play system will return in the response to API calls.

| Cod<br>e | Description   |
|----------|---|
| 5        | Invalid hash code. Should be returned in the response on any request sent by Pragmatic Play if the hash code validation is failed.                    |
| 7        | Bad parameters in the request, please check post parameters.  |
| 100      | Internal server error. Casino Operator will return this error code if their system has internal problem and cannot process the request at the moment. |

## 15.6 Promo campaigns requirements for regulated markets

According to the new requirements (e.g Spanish certification requirements or Dutch Gaming Authority / KSA), an operator needs to authenticate every player before letting them access any promo campaign (incl. FSB, Tournament and Prize Drop campaigns). Players need to meet promotion criteria set by the particular regulator before participating in a promo campaign. That is why operator should send player's status (is player eligible for promo or not) to Pragmatic Play before game suggests any promotions to that player. If player is eligible, player will receive a notification about existing promotions and can take part in it. If player is not eligible, no promo notifications will be displayed.

### Solutions:

Operator can notify PragmaticPlay system about player's promo-access status in both ways, by special parameter in game launch URL or special parameter in authenticate response

It is recommended For Casino Operator to use **extraInfo parameter in authenticate\_response** option, as this way is secure and excludes possibility of promo access status control from player's side.

**extraInfo parameter in authenticate response** has priority over **promo parameter in game launch URL**

#### 1. **extraInfo parameter in authenticate\_response**

When player opens any of the Pragmatic Play games, Operator needs to send the specific parameter in authenticate response which indicates player's promo status `"extraInfo":{"promoAvailable":"y"}`

- If promoAvailable:"**y**" – it means that player is eligible for promotions and promo can be suggested to that player.
- If promoAvailable:"**n**" – it means that player is not eligible for promotions and promo should not be suggested to that player.

#### 2. **promo parameter in game launch URL**

Every time player opens any of the Pragmatic Play games, Operator needs to send the specific parameter with player's promo status. The new parameter **promo** will be added into launcher with possible values y – yes/n – no.

- If promo = **y** – it means that player is eligible for promotions and promo can be suggested to that player.
- If promo = **n** – it means that player is not eligible for promotions and promo should not be suggested to that player.

## XVI. Integration with demo games

**Important:** In order to start using demo games, the Operator must implement the opening of the games through the appropriate use of the **playMode** parameter in the methods:

- 3.1.2 GameURL for Seamless Wallet API

\***stylename** - SecureLogin configured for real brand on PragmaticPlay side.

It should be sent in order to launch Demo session with real game configurations, such as RTP, in markets where it is required by regulation.

Also, to launch demo game with real bet scales configuration, operator has to send optional parameter "cur" in game launch URL

*In case Casino Operator needs real game configuration to be loaded in demo games with stylename, they should ask the Pragmatic Play's Technical Support for additional configuration.*

- 4.8 StartGame for Balance Transfer API

## XVII. Bingo Integration API

### Bingo Game API

Using Bingo game API, OPERATOR is able to integrate both types of games: web versions for desktop and mobile devices. Provider provides Bingo builds based on HTML5 technology. HTML5 versions are available for desktop and mobile devices.

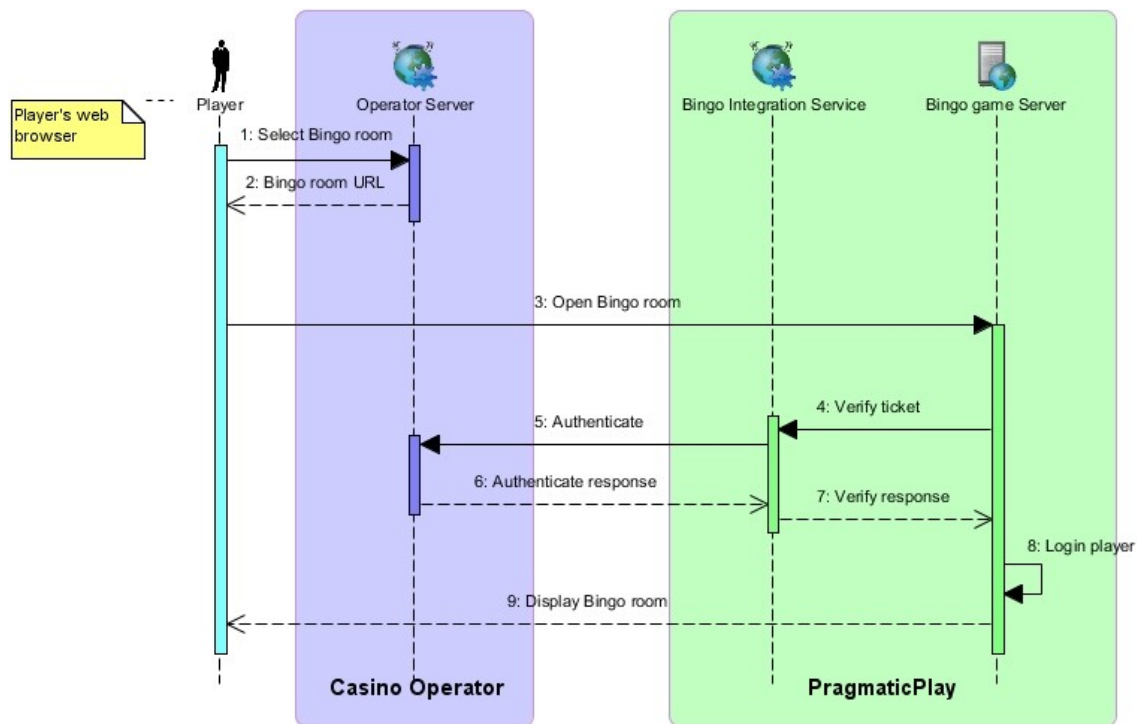

### Definitions

#### List of definitions for the OPERATOR:

1. Bingo room – specific theme for web client.
2. Bingo game session – order of bingo games for specific period of time and bingo room.
3. Bingo game – specific settings in game for bingo game round.

### 17.1 Bingo room Launching

#### Room opening

#### Bingo game launch URL (deprecated)

## Bingo gameURL API method

*Request path: POST /game/url*

Using this method Operator can receive a valid launch URL to requested game.

*Request parameters*

| Name             | Description  | Status   |
|------------------|--|----------|
| secureLogin      | User name for authentication in the Casino Game API service.   | Required |
| room             | The unique identifier for Bingo room (for bingo lobby 9999).   | Required |
| language         | Language on which the game should be opened.   | Required |
| token            | Secure one-time token is generated by OPERATOR for specific player.  | Required |
| externalPlayerId | <p>Unique identifier of the player within the Casino Operator system.<br/>Parameter value is case-sensitive.<br/><i>Example: joe1001, 2644987, playerABC*, playerAbc*</i></p> <ul style="list-style-type: none"> <li>playerABC and playerAbc – are two different player accounts within Pragmatic Play system</li> </ul> | Required |
| currency         | Player's ISO 4217 currency code. Examples: 'EUR' or 'USD'.   | Optional |
| platform         | Platform for which the game should be opened   | Optional |
| profileURL       | User profile page.   | Optional |
| promotionalURL   | A page which includes promotion information.   | Optional |
| rcCloseURL       | <p>A link to the page on the Operator's website, to which the player will be redirected if they choose to close the game.<br/><i>For an iframe, the following example should be used:</i><br/>rcCloseUrl=javascript:window.parent.location.href='{http://somewebsite.com/}'</p>  | Optional |
| stylename        | Unique identifier of the OPERATOR at PROVIDER side (not for all integration protocols).  | Optional |
| cashierURL       | URL for opening the cashier on Casino Operator site when a player has no funds.  | Optional |
| lobbyURL         | URL for returning to Lobby page on Casino Operator site. This link is used for Back to   | Optional |

|                   |   |          |
|-------------------|---|----------|
|                   | Lobby (Home) button in mobile version of games.   |          |
| gamesLobby        | The external html page which shows user a list of mini slots and manages to launch them (Mini Slots).   | Optional |
| rci               | The reality check interval, in minutes.   | Optional |
| rce               | The reality check elapsed time, in minutes.   | Optional |
| rcHistoryUrl      | <p>A link to the player's game history.</p> <p><i>For an iframe, the following example should be used:</i></p> <p>rcHistoryUrl=javascript:window.parent.location.href='{http://somewebsite.com/}'</p>   | Optional |
| rcCloseUrl        | <p>A link to the page on the Operator's website, to which the player will be redirected if they choose to close the game.</p> <p><i>For an iframe, the following example should be used:</i></p> <p>rcCloseUrl=javascript:window.parent.location.href='{http://somewebsite.com/}'</p> | Optional |
| responsibleGaming | A separate page which contains 'responsible gaming' info.   | Optional |
| isNewWindow       | <p>The parameter to define if bingo client needs to display some elements which are related to full tab view. (ex logo in header). Available values:</p> <ul style="list-style-type: none"> <li>– true – new window</li> <li>– false – iframe inside OPERATOR's website</li> </ul>    | Optional |
| selfTestPageURL   | For Sweden jurisdiction. Required logos link to Operator side.  | Optional |
| budgetURL         | For Sweden jurisdiction. Required logos link to Operator side.  | Optional |
| suspensionURL     | For Sweden jurisdiction. Required logos link to Operator side.  | Optional |
| timer             | For Sweden jurisdiction. This value Operator can set as initial for logged time session. In case if parameter is empty, logged session will be calculated from beginning.   | Optional |
| hash              | Hash code of the request  | Required |

*Response parameters*

| Name    | Description  |
|---------|--|
| gameURL | Link to the game to be open on the Pragmatic Play side. This link will contain special parameters which should remain as is. |

*Example of HTTP request:*

```
POST /BingoIntegration/BingoGameAPI/game/url/ HTTP/1.1
Host: api-bingo.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=ext_test1&room=9999&language=en&currency=EUR&platform=WEB&token=dsgfssdf5g4dfg&stylename=ext_test1&externalPlayerId=playerAbc&cashierURL=http://somewebsite.com/cashier/&lobbyURL=http://somewebsite.com/lobby/
```

*Example of JSON response:*

```
{
  "error": 0,
  "description": "OK",
  "gameURL": "https://bingo.prerelease-env.biz/bingo/playBingo.do?key=token%3Ddsgfssdf5g4dfg%26room%3D9999%26language%3Den&stylename=test1"
}
```

The table below contains the error codes that the Pragmatic Play system will return in the response to GameURL API calls.

| Code | Description   | Further Action Recommendations                              |
|------|---|---|
| 1    | Internal error. Try later please.   | Error reason should be checked in relevant support channel. |
| 2    | Incorrect secure LOGIN and secure password combination (will be returned also if the hash code validation is failed). | Verify request values                                       |
| 7    | One or several input(s) is not set or set incorrectly.  | Verify request values                                       |
| 14   | Required field is empty: {0} is required.   | Check missing and required parameters.                      |

## Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

6. Sort all parameter by keys in alphabetical order.
7. Append them in key1=value1&key2=value2.
8. Append secret key, e.g.: key1=value1&key2=value2SECRET.
9. Calculate the hash by using MD5.
10. **Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.**

**Desktop** version of bingo client should have minimal width for wrapper (iframe) 840dp and height 500dp, so that content can be fully displayed. In **mobile** version, for phones and tablets, the bingo client support min window width 320dp.

Our Backend allows to disable some elements in bingo client depending on its version:

1. For **Mobile** version:
  - Multi Tabs – no switching between rooms within mobile bingo client interface;
  - Balance – no balance with deposit button within mobile bingo client interface;
  - Menu – no menu button within mobile bingo client interface;
  - Mini-games lobby – no mini games functionality within mobile bingo client interface;
  - Chat – no chatting functionality;
2. For **Desktop** version:
  - Header – no header within desktop bingo client interface replacing balance and menu to interface below, no bingo lobby functionality;
  - Menu - no menu button within desktop bingo client interface;
  - Balance – no balance field within desktop bingo client interface;
  - Mini-games lobby – no mini games functionality within desktop bingo client interface;
  - Chat - no chat area within desktop bingo client interface;

In order to access different settings and launch bingo client inside iframe on Operator websites, the following cases with custom messages are available:

- { name: 'notifyCloseContainer' } - is sent for any closing event inside bingo client which notifies main window that container with bingo client should be closed.
- in case if Operator requires room list filtration for lobby inside bingo client or preorders, by PP back office setting will be activated automatically sending for cases when client has launched post message { type: 'getRooms' }. After this Operator's site should response with post message { type: 'rooms', roomId: [...] }, with rooms which are available for current user. Each time when site list is updated, the new post message should be sent.
- { name: 'nonAuthorized' } - this post message is sent to main window each time when non-logged user is trying to open a room from bingo client, that site could show login form above bingo client.
- { type: 'gameHistory', url: '/gameHistory/' } - is sent to main window = if Menu within bingo client interface is disabled and Operator wants to use user bingo history from PP.
- { type: 'deposit' } - is sent to main window for deposit button action inside bingo client interface, if Operator requires keep bingo client and deposit window in same tab. Need to be configured in PP back office.

## "My Offers" page launch

How to Access Bingo Client and Display "My Offers" by Default.

Instruction:

Step 1: On the Operator's website, on a dedicated page, add a button with a link to the Bingo Client.

Step 2: If you want "My Offers" section to be displayed by default when user clicks on the button, make sure you add the following parameter to the end of the URL: "&action=myOffers".

Step 3: An example of a link that, when clicked, will redirect the user to the Bingo client right in the "My Offers" section:

[https://<Server domain>/bingo/playBingo.do?key=token%3D<token>%26room%3D<9999>%26language%3D<language>%26cashierURL%3D<cashierURL>%26lobbyURL%3D<lobbyURL>%26profileURL%3D<profileURL>%26preBuyCardURL%3D<preBuyCardURL>%26promotionURL%3D<promotionURL>%26rci%3D0%26rce%3D0%26rcHistoryUrl%3D<rcHistoryUrl>%26rcCloseUrl%3D<rcCloseUrl>%26gamesLobby%3D<gamesLobby>%26responsibleGaming%3D<responsibleGamingURL>%26selfTestPageURL%3D<OperatorUrl>budgetURL%3D<OperatorUrl>suspensionURL%3D<OperatorUrl>timer%3D<playedPeriod>%26isNewWindow%3Dfalse&styleName=<operator\\_styleName>&action=myOffers](https://<Server domain>/bingo/playBingo.do?key=token%3D<token>%26room%3D<9999>%26language%3D<language>%26cashierURL%3D<cashierURL>%26lobbyURL%3D<lobbyURL>%26profileURL%3D<profileURL>%26preBuyCardURL%3D<preBuyCardURL>%26promotionURL%3D<promotionURL>%26rci%3D0%26rce%3D0%26rcHistoryUrl%3D<rcHistoryUrl>%26rcCloseUrl%3D<rcCloseUrl>%26gamesLobby%3D<gamesLobby>%26responsibleGaming%3D<responsibleGamingURL>%26selfTestPageURL%3D<OperatorUrl>budgetURL%3D<OperatorUrl>suspensionURL%3D<OperatorUrl>timer%3D<playedPeriod>%26isNewWindow%3Dfalse&styleName=<operator_styleName>&action=myOffers)

Step 4: Click on the button to load the Bingo client with "My Offers" section displayed by default.

*Note:* This feature is optional and is only available to Operators who choose to use it. If you do not want to use this feature, simply do not add the "&action=myOffers" parameter to the end of the URL.

Additionally, Seamless Wallet API can be used for easy and seamless access to the Bingo client features.

If you encounter any issues or have any questions about accessing the Bingo client with the "My Offers" section displayed by default, please contact our technical support team for assistance.

## Mini-games

Bingo client allows OPERATOR to introduce user to Bingo, video slots and other games by using iframe in special area inside web application.

In order to do that, the OPERATOR needs to create a special lobby page for mini-games list (should be hosted on OPERATOR side), which will allow player to choose and play any mini-game inside Bingo client.

Iframe's size for lobby page in the **desktop version** should have non-fixed height but alterable width between 720dp and 480dp. Mini-game will be launched in special container as separate iframe, by post message notification from lobby-page to main window, in moment when user clicks to launch a min-game. The aspect ratio between width and height is 16:9 for mini-game container in each resolution.

Iframe's size for lobby page in the **mobile version** has alterable width between 320dp and higher, depends on device display size, an aspect ratio of iframe between width and height is 16:9.

OPERATOR needs to implement special post messages logic for Bingo web client page.

### Implementation of post messages by the dispatched event explanation:

'otherWindow' can listen to dispatched messages by executing the following JavaScript:

```
window.addEventListener("message", receiveMessage, false);

function receiveMessage(event)
{
  if (event.origin !== "http://example.org:8080")
    return;
  // ...
}
```

**NOTE: External link from the Operator side should always begin with HTTPS. CORS headers should always be present.**

Example of implementation on OPERATOR side:

```
<div class="mini-games__item" >
  <div
    class="mini-games__item-img"
    style="background-image: url(/resources/mini-slots/madame-destiny.png)"
    data-link="https://{game server domain}/gs2c/playGame.do?key=<KEY_VALUE>&stylename={secureLogin}&gameSym-
bol=vs10madame&minimode=1"
  ></div>
</div>
```

Bingo client expects receive next:

`window.postMessage(JSON.stringify({ type: 'OPEN_SLOT', link: <link of launcher>}), '*');` – when game is launching on OPERATOR lobby page should be sent such post message.

For game Providers of mini-games to sync updating of balance between bingo and game, we recommend to support next post message: `postMessage({ name: 'updateBalance' }, '*')`. This post message will be sent by bingo client to child window with mini-game container to update balance information.

For more information use the following documentation:

<https://developer.mozilla.org/en-US/docs/Web/API/Window/postMessage>

## 17.2 Bingo integration API for OPERATOR side

This is a simple API for Pragmatic Play gaming platform to connect to player's wallet. API is an HTTP listener, which listens application/x-www-form-urlencoded POST requests.

To connect player's wallet at operator side, methods and specification which are described in section [III Seamless Wallet API](#) of current document should be used.

As an option, In order to set player's nickname which will be used in bingo chat, provider can pass optional parameter "nickname" in response of method [3.4 Authenticate](#).

### Nickname

*Request path: /nickname.html*

*\*request path is the same as for Seamless Wallet API*

The method is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this method to be sent, they should ask Pragmatic Play's Technical Support for additional configuration.

This method is used by Pragmatic Play side for informing OPERATORS about what nickname is used by player in bingo system. For example, in situation when Operator doesn't support nickname parameter in 3.4 Authenticate method, user needs to set up nickname inside bingo game client, and this nickname will be forwarded back to the OPERATOR in this method.

#### Request parameters

| Name       | Type        | Description   | Status   |
|------------|-------------|---|----------|
| userId     | String(100) | Identifier of the user within the Casino Operator system. | Required |
| nickName   | String(100) | Current nickname of player in Pragmatic Play system.      | Required |
| providerId | String (32) | Game provider identifier.                                 | Required |
| hash       | String (32) | Hash code of the request                                  | Required |

#### Response parameters

| Name        | Type        | Description                        | Status   |
|-------------|-------------|------------------------------------|----------|
| error       | Number      | Response status.                   | Required |
| description | String(250) | Response status short description. | Required |

#### Example of HTTP request:

```
POST /nickname.html HTTP/1.1
Host: someoperatordomain.net
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

nickName=PlayerNickname&userId=16b31c8848b21&providerId=PragmaticPlay&hash=d8450312aee2fe68c76f80be75d26849
```

#### Example of JSON response:

```
{  
  "error": "0",  
  "description": "OK",  
}
```

## Free Spins Bonus Prizes

This feature allows operator to set prize type as Free Spins Bonus (FSB), which further can be used by player in PragmaticPlay slot games.

In order to support Spinner room with FSB prizes in BINGO product, In **3.8 Result**, **3.11 EndRound**, **3.8 BonusWin** methods will be added new optional array **specPrizes[#]** with next parameters inside:

- specPrizeAmount – number of FSB which was won by player in bingo game
- specPrizeCode – unqual FSB bonus code within PP system per bingo game and player.
- specPrizeType – “FSB” which will be special mark that this prize is Free Spins bonus for casino game

This list is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play’s Technical Support for additional configuration. Such result should be sent only if player won FSB with other monetary prize. Otherwise if players has only FSB prize in current game, this list should be taken from endRound and result is not sent. If Operator’s players participate in bingo games with FSB prizes but this list is not set up, result won’t be sent at all and round will be closed without winners on Operator side.

## 17.3 Bingo integration API for PROVIDER side

### Hash calculation

In Provider side API security hash is passed as special request header x-hash

Consider the RoomList request as an example of hash calculation.

**NOTE:** parameter names should be taken for calculation by order from json request

#### Phase 1: Get request body

Example:

```
{
  "language": "en",
  "playerID": "1677d81655c46",
  "secureLogin": "secure_login"
}
```

#### Phase 2: Add 'secure password' to request body string

Example:

```
{
  "language": "en",
  "playerID": "1677d81655c46",
  "secureLogin": "secure_login"
}secure_password
```

#### Phase 3 Encode MD5

Example:

[62e80083e2ffb016890d33aae54a240d](#)

#### Phase 4: Add x-hash header to the request

Example:

```
POST /BingoIntegration/BingoGameAPI/RoomList HTTP/1.1
Host: api-domain
-H 'x-hash: 62e80083e2ffb016890d33aae54a240d'
-H 'Content-Type: application/json'
-d '{
  "language": "en",
  "playerID": "1677d81655c46",
  "secureLogin": "secure_login"
}'
```

## RoomList V2

This method returns a list of active bingo rooms for the current time period.

### Request parameters

| Property    | Type   | Description                       | Status   |
|-------------|--------|-----------------------------------|----------|
| playerId    | String | Unique player identifier          | Optional |
| language    | String | Player's language by ISO 639-1    | Optional |
| secureLogin | String | Login to access the API           | Required |
| currency    | String | Currency of player ('EUR', 'USD') | Required |

### Example of request:

```
POST /BingoIntegration/BingoGameAPI/RoomList/v2 HTTP/1.1
Content-Type: application/json
X-hash: 2bb56e5d20e5565563d22a6489b2cd74
Host: example.com
Content-Length: 114
```

```
{
  "playerId" : "1623e6952764",
  "currency" : "EUR",
  "language" : "en",
  "secureLogin" : "brand_login"
}
```

### Response parameters

| Property         | Type                    | Description                          |
|------------------|-------------------------|--------------------------------------|
| error            | integer                 | Response status.                     |
| description      | string                  | Response status - short description. |
| activeRoomList   | Array of 'Room V2' type | List of active bingo rooms.          |
| upcomingRoomList | Array of 'Room V2' type | List of upcoming bingo rooms.        |

### Structure 'RoomV2'

| Property           | Type                             | Description  |
|--------------------|----------------------------------|--|
| roomId             | long                             | Bingo room identifier.   |
| bingoType          | integer                          | Bingo game type  |
| roomName           | string                           | Bingo room name.   |
| cardCost           | List                             | Array of card cost of package. More one element if multi stake game.   |
| gamePrize          | Array of type 'PrizeStructure'   | Array of game prize. More one element if multi stake game.   |
| jackpots           | Array of type 'JackpotStructure' | Jackpots amounts   |
| nextGameStart      | number                           | Starting time of the next game.<br>(in UNIX timestamp in ms)   |
| playersBoughtCards | integer                          | Number of players who bought cards for the current game.   |
| playersInRoom      | integer                          | Number of players in the current bingo room.   |
| jurisdiction       | string                           | May contain one or multiple jurisdictions comma separated  |
| inSession          | boolean                          | Always false   |
| private            | boolean                          | Possible values - true, false. If true - the room has specific entry conditions. If false – regular public room. |
| x2goPrizes         | Map type 'PrizeStructure'        | Map of x to go prizes. Key- Value  |
| rollOnPrizes       | Map type 'PrizeStructure'        | Map of Roll on prizes Key- Value   |

*Structure 'PrizeStructure'*

| Property       | Type                       | Description   |
|----------------|----------------------------|---|
| amount         | Double                     | (optional) Prize amount or equivalent prize amount on request currency. |
| prizeType      | String (SpecificPrizeType) | Type of prize (monetary, FRB, PhysicalPrize).                           |
| specificName   | String                     | (optional) Specific prize name.   |
| specificAmount | Double                     | (optional) Specific prize amount.                                       |
| betPerLine     | Double                     | (optional) Only for prize type FRB.                                     |

*Structure 'JackpotStructure'*

| Property    | Type                               | Description   |
|-------------|------------------------------------|---|
| jackpotId   | long                               | Id vof current jackpot.   |
| name        | String                             | Name of jackpot.  |
| prize       | Structure of type 'PrizeStructure' | Jackpot prize   |
| jackpotType | String                             | Type of jackpot (PJP - Progressive JP, FJP - Fixed JP, CPJ - Community Progressive JP, CFJ - Community Fixed JP). |

NOTE: In one game can be either Xtogos or Roll-ons as additional prizes, or nothing

## JackpotWinners

This method returns jackpot winners with all required information for specific date.

### Request parameters

| Property    | Type   | Description                                | Status   |
|-------------|--------|--|----------|
| secureLogin | String | Login to access the API                    | Required |
| dateFrom    | Number | Start date of the request. UNIX time in ms | Required |
| dateTo      | Number | End date of the request. UNIX time in ms   | Required |
| language    | String | Player's language                          | Optional |

### Example request

```
POST /BingoIntegration/BingoGameAPI/JackpotWinners HTTP/1.1
Host: api-bingo.prerelease-env.biz
Content-Type: application/json
x-hash: 75b4923eef6667b9833dd2fa6f3fcaab
{"dateFrom":1544054400000,"dateTo":1544140800000,"language":"en","secureLogin":"vitalis"}
```

### Response parameters

| Property       | Type                          | Description   | Status   |
|----------------|-------------------------------|---|----------|
| error          | Number                        | Response status.  | Required |
| description    | String                        | Response status short description.                                      | Required |
| jackpotWinners | array of type 'JackpotWinner' | The list of objects for transferring information about jackpot winners. | Required |

### Structure 'JackpotWinner'

| Property    | Type    | Description  | Status   |
|-------------|---------|--|----------|
| playerID    | string  | Unique player identifier.                          | Required |
| nickname    | string  | Player's nickname.                                 | Optional |
| amount      | double  | Jackpot won amount.                                | Required |
| dateTime    | number  | Date and time when jackpot is won. UNIX time in ms | Required |
| jackpotName | string  | Name of the jackpot.                               | Required |
| roomID      | number  | ID of the room.                                    | Required |
| bingoType   | integer | Bingo game type (75,90,80,50,30)                   | Required |
| gameName    | string  | Name of the game when jackpot is won.              | Required |
| roundID     | number  | ID of the round.                                   | Required |
| currency    | string  | Player's currency ISO 4217                         | Required |

### Example response

```
{
  "error": 0,
  "description": "OK",
  "jackpotWinners": [

    }
  ]
}
```

## ChangeNickname

This method is responsible for changing of player's nickname.

### Request parameters

| Property    | Type   | Description                 | Status   |
|-------------|--------|-----------------------------|----------|
| secureLogin | string | Login to access the API     | Required |
| playerID    | string | Unique player identifier.   | Required |
| nickname    | string | New nickname of the player. | Required |

### Example request

```
POST /BingoIntegration/BingoGameAPI/ChangeNickname HTTP/1.1
```

```
Host: api-bingo.prerelease-env.biz
```

```
Content-Type: application/json
```

```
x-hash: 06e0c41632d208c5b5b8fc3487279b99
```

```
{"playerID": "playerID", "nickname": "NewNickname", "secureLogin": "secureLogin"}
```

### Response parameters

| Property    | Type   | Description                        | Status   |
|-------------|--------|------------------------------------|----------|
| Error       | number | Response status.                   | Required |
| description | string | Response status short description. | Required |

### Example response

```
{  
  "error": 0,  
  "description": "OK"  
}
```

## Bingo Player History

This method returns list of rounds that were played by player in specified period of time. It is available in BingoGameAPI.

### Request parameters

| Property     | Type    | Description   | Status   |
|--------------|---------|---|----------|
| secureLogin  | string  | Login to access the API                                     | Required |
| playerID     | string  | Unique player identifier                                    | Required |
| startDate    | number  | Starting date of request period. UNIX time in ms            | Required |
| endDate      | number  | End date for request period. UNIX time in ms                | Required |
| Language     | string  | Player's language   | Required |
| roundID      | Number  | Round ID for player transaction from common API.            | Optional |
| bingoRoundID | Number  | Unique identifier of played bingo round from Provider side. | Optional |
| fromIndex    | number  | Starting index for result order in response                 | Required |
| pageOffset   | integer | Number of result on page (limit 50 items)                   | Required |

NOTE: In this request can be sent one of 2 parameters: roundID or bingoRoundID or without in case search for time-frame

### Example request:

```
POST /BingoIntegration/BingoGameAPI/BingoPlayerHistory HTTP/1.1
Host: api-bingo.prerelease-env.biz
x-hash: 146ad89345eca759410c31ab3d72458b
Content-Type: application/json
```

```
{"secureLogin":"securelogin","playerID":"16243a2ec4218f2","startDate":1543660263791,"endDate":1544610663791,"language":"es","roundID":20006700607,"fromIndex":0,"pageOffset":50}
```

### Response values

| Property           | Type                   | Description               | Status   |
|--------------------|------------------------|---------------------------|----------|
| <b>error</b>       | string                 | Number of errors.         | Required |
| <b>description</b> | string                 | Description of error      | Required |
| bingoRounds        | array of type 'Rounds' | List of rounds.           | Required |
| count              | long                   | Number of founded results | Optional |

*Structure 'Rounds'*

| Property         | Type    | Description   | Status   |
|------------------|---------|---|----------|
| bingoRoundID     | long    | Unique identifier of played bingo round from Provider side.                       | Required |
| roomName         | string  | Name of room where the round was played   | Required |
| roundDate        | number  | Date and time of round start. UNIX time in ms                                     | Required |
| price            | double  | Sum of money which was spent by player  | Required |
| cardsNumber      | integer | Sum of cards which were bought for round  | Required |
| givenCardsNumber | Integer | The number of cards given to player in addition (relevant for Buy X get Y games). | Required |
| freeCardsNumber  | integer | The number of cards, which are played by player as free cards from FSB.           | Required |
| prize            | double  | Sum of money which player won   | Required |

*Example response:*

```
{
  "error": 0,
  "description": "OK",
  "bingoRounds": [
    {
      "bingoRoundID": "71635203",

      "cardsNumber": 10,
      "givenCardsNumber": 10,
      "freeCardsNumber": 10,
      "prize": 506.01
    }
  ],
  "count": 1
}
```

## Bingo Round History

This method returns information about bought / given cards for specified bingo game as well as information about played bingo games. It can be also used for receiving information about number of cards in a game.

### Request parameters

| Property     | Type   | Description   | Status   |
|--------------|--------|---|----------|
| secureLogin  | string | Login to access the API                                     | Required |
| roundID      | number | Round ID for player transaction from wallet API.            | Required |
| bingoRoundID | number | Unique identifier of played bingo round from Provider side. | Required |
| language     | string | Player's language.  | Optional |

NOTE: In this request should be sent at least one of 2 parameters: roundID or bingoRoundID

### Example request:

```
POST /BingoIntegration/BingoGameAPI/BingoRoundHistory HTTP/1.1
Host: api-bingo.prerelease-env.biz
Content-Type: application/json
x-hash: 448f27e631b836c4549b49d492fb3423

{"roundID": 1000, "language": "en", "secureLogin": "securelogin"}
```

### Response parameters

| Property     | Type                        | Description   | Status   |
|--------------|-----------------------------|---|----------|
| gameName     | string                      | Name of the game.   | Optional |
| gameID       | Number                      | ID of the game. (Bingo game ID)   | Required |
| roomID       | Number                      | ID of the room.   | Required |
| bingoType    | integer                     | Bingo game type (75 or 90)  | Required |
| bingoRoundID | number                      | Unique identifier of played bingo round from Provider side.   | Required |
| bingoCalls   | string                      | Called numbers divided by whitespaces up to winning call.   | Optional |
| bingoWinners | array of BingoWinners       | The list of objects with information about pattern and winners per game part. For usual game this list contain single object. | Required |
| boughtCards  | array of type 'BoughtCards' | The list of objects with information about players and cards number, bought for specific round.                               | Required |
| error        | number                      | Response status.  | Required |
| description  | string                      | Response status short description.  |          |

*Structure 'BingoWinner'*

| Property          | Type                              | Description                                    | Status   |
|-------------------|-----------------------------------|--|----------|
| partNumber        | integer                           | Number of part for which winners are returned. | Required |
| pattern           | string                            | Name of the pattern for current part.          | Required |
| winningCallNumber | integer                           | Number of call when prize was won.             | Required |
| winnerDetails     | array of<br>'BingoWinnerDetails', |  | Required |

*Structure BingoWinnerDetails'*

| Property    | Type   | Description                                 | Status   |
|-------------|--------|---|----------|
| playerID    | string | Unique player identifier on operator's side | Required |
| currency    | string | Currency of player                          | Required |
| prizeAmount | double | Prize amount won                            | Required |
| jpAmount    | double | Jackpot amount won                          | Required |
| cardID      | number | ID of the winning card                      | Required |
| nickname    | String | Player nickname.                            | Required |

*Structure 'BoughtCards'*

| Property          | Type    | Description   | Status   |
|-------------------|---------|---|----------|
| playerID          | string  | Unique player identifier.   | Required |
| boughtCardsNumber | integer | The number of cards bought for specific round by player. For free games it is number of cards, given automatically to player during purchase period. For fixed-price game it will be number of cards in a pack. | Required |
| givenCardsNumber  | integer | The number of cards given to player in addition (relevant for Buy X get Y games).   | Required |
| freeCardsNumber   | Integer | The number of cards, which are played by player as free cards from FSB.   | Required |
| cardCost          | double  | Cards cost for specific bingo round. For fixed-price game it will be cost of one card from pack.  | Required |
| currency          | string  | Currency of the player (ISO 4217). Examples: EUR' or USD'.  | Optional |

## Error Codes

Tables below contain the error codes that should be returned by PROVIDER in the response.

Shared exceptions:

| Code | Description  |
|------|--|
| 0    | "OK"   |
| 100  | Internal Service Error   |
| 5    | Incorrect secureLogin or/and securePassword                    |
| 7    | Required field is empty: '{0}' is required                     |
| 8    | Field {0} is wrong. {0} will contain a field causing an error. |
| 9    | Player with transferred nickname already exists                |
| 10   | Player is not found  |
| 11   | Currency code '{0}' is incorrect or unsupported                |

Bingo exceptions:

| Code | Description   |
|------|---|
| 101  | You cannot order cards more than max available number                         |
| 102  | Pre-order of cards is not allowed at this point of time for the selected game |
| 103  | This game is not available anymore. Please order cards to another game        |
| 105  | The requested data is not found   |
| 106  | The cards were not found according to the criteria                            |
| 107  | incorrect number of cards   |
| 1    | Insufficient balance  |
| 109  | Wallet transaction failed   |
| 110  | Max number of cards are already bought for this round                         |

Bonus service exceptions:

| Code | Description  |
|------|--|
| 202  | Request problem. Empty mandatory field '%s'. '%s' will contain a field causing an error      |
| 203  | Room(s) are not supported: %s. '%s' will contain ID of a room / rooms causing an error       |
| 204  | Game(s) do not support FR bonus: %s. '%s' will contain ID of a game / games causing an error |

|     |  |
|-----|--|
| 205 | May be raised when Creating a Bonus. Bonus code already exists   |
| 206 | May be raised when Cancelling a Bonus. Bonus is not found or already released                            |
| 207 | May be raised when Cancelling a Bonus. Bonus is already canceled   |
| 208 | May be raised when Cancelling a Bonus. FS bonus is started to play                                       |
| 211 | May be raised when Creating a Bonus. Expiration date limit has been exceeded                             |
| 212 | May be raised when Creating a Bonus. Expiration date can't be in the past                                |
| 214 | May be raised when Creating a Bonus. Same bonus already exists (player, rooms, expire_date etc)          |
| 215 | Request problem. Type mismatch for value '%s'. '%s' will contain a value causing an error                |
| 216 | Request problem. Wrong json data: '%s'. '%s' will contain a data causing an error                        |
| 217 | Deprecated. Validity date must be after expiration date  |
| 219 | Deprecated. Room '%s' does not support %s bonus. '%s' will contain room ID and bonus ID causing an error |
| 220 | Deprecated. May be raised when Creating a Bonus. Bonus does not support selected room                    |
| 221 | Invalid bonus type   |
| 222 | Invalid min price  |
| 223 | Invalid max price  |
| 224 | Minimum price should be less or equal to maximum price   |

## 17.4 Free tickets API

### ActiveGameConfigs

This method returns a list of used game configurations in each Bingo room.

#### Request parameters

| Property    | Type   | Description                | Status   |
|-------------|--------|----------------------------|----------|
| secureLogin | string | Login to access the API    | Required |
| currency    | string | Currency symbol (ISO 4217) | Optional |
| roomID      | Number | Bingo room identifier.     | Optional |

#### Example of request

```
POST /BingoIntegration/FreeTicketsAPI/ActiveGameConfigs HTTP/1.1
Host: api-bingo.prerelease-env.biz
Content-Type: application/json
x-hash: 75b4923eef6667b9833dd2fa6f3fcaab
```

```
{
  "currency": "USD"
, "roomID": 1582
, "secureLogin": "7casino"
}
```

#### Response parameters

| Property    | Type                  | Description                          |
|-------------|-----------------------|--------------------------------------|
| error       | number                | Response status.                     |
| description | string                | Response status - short description. |
| rooms       | array of type 'Rooms' | List of Bingo rooms with details     |

#### Structure 'Rooms'

| Property    | Type                        | Description   |
|-------------|-----------------------------|---|
| roomName    | String                      | Bingo room name   |
| roomID      | Number                      | Bingo room identifier.  |
| standardFT  | Boolean                     | True or false. True - if standard free tickets can be used to play in this room |
| monetaryFT  | Boolean                     | True or false. True - if monetary free tickets can be used to play in this room |
| gameConfigs | array of type 'gameConfigs' | List of game configurations for bingo rounds                                    |

#### Structure 'gameConfigs'

| Property     | Type   | Description  |
|--------------|--------|--|
| gameConfigID | String | Unique game configuration ID within the Pragmatic play.          |
| gameName     | String | Name of Bingo game.  |
| cost         | Number | Cost for a ticket or cost for a pack (depending on the settings) |
| type         | String | Defines purchase of tickets type (by one or by fixed pack)       |

|              |                                     |  |
|--------------|-------------------------------------|--|
| prize        | Number                              | Initial game prize pot for all parts in platform currency  |
| x2goPrizes   | Array of the type<br>'x2goPrizes'   | Arrays of XtoGo prizes   |
| jackpot      | Boolean                             | True or false. True If the jackpot is included in this game  |
| rollOnPrizes | Array of the type<br>'rollOnPrizes' | Array of Roll on prizes  |
| prizeType    | string                              | FRB – for FRB prizes, this value present only when special prizes  |
| betPerLine   | Number                              | Value of money for one line in casino games for player currency. This value present only when FRB prizes |

*Structure 'rollOnPrizes'*

| Property | Type   | Description                |
|----------|--------|----------------------------|
| rollOn   | Number | Level of Roll on prize     |
| prize    | Number | Pot for each Roll on prize |

*Structure 'x2goPrizes'*

| Property | Type   | Description              |
|----------|--------|--------------------------|
| x2go     | Number | Level of XtoGO prize     |
| prize    | Number | Pot for each XtoGo prize |

NOTE: If currency is not sent in request, in response there will be platform currency

}
```

## XVIII. Live Casino Integration

To connect player's wallet at operator side, methods and specification which are described in section [III Seamless Wallet API](#) of current document should be used.

### 18.1 Live Casino Dynamic Games Access

#### DGA Overview

DGA stands for Dynamic Games Access.

DGA is a data transfer system that will provide our operators with game table data to populate thumbnails on their website. Functionality will use HTML Websockets protocol to transfer the data to the operator's website in real time. Data will be consumed in JSON format.

#### WebSocket data feed

Pragmaticplay will provide the operator with a JavaScript API (.js file) to handle the HTML Websocket protocol. Using this API an operator will be able to make a successful subscribe to the websockets and also have functions available to listen and consume the incoming data. Doing this will allow an operator a very easy way of managing the data on their website.

#### Data feeds

The type of information that will be delivered to an operator through the DGA system will be the following:

- Table Name, language specific table info & image.
- Table Limits
- Table Open/Closed
- NewTable(true/false) (if new table is created and in less than 30 days, will be passed newTable:true , otherwise - newTable:false)
- Dealer Name
- Roulette
  - Last 20 results
  - Updated after each game round
  - Number of players in the game
- Baccarat
  - Shuffle notifications
  - Last 21 results
  - Updated after every game
  - baccaratShoeSummary - Provides the total number of completed games, along with a breakdown of results: number of Player wins, Banker wins, Tie outcomes, as well as the count of Player Pair and Banker Pair occurrences
- Blackjack
  - Seats taken/seats open
- One Blackjack
  - Number of players in the game
- Game Shows
  - Last 20 results
    - Slots of multipliers (if applicable)
  - Number of players in the game
- Mega Sic Bac

- Last 21 results
  - Number of players in the game
- Football Blitz Top Card
  - Last 21 results
  - Number of players in the game
- Sic Bo
  - Last 20 results with each die value and their total sum
  - Number of players in the game
- Dragon Tiger
  - Last 21 results
  - Statistics
  - Shuffle notifications
  - Number of players in the game
- Andar Bahar
  - Last 21 Results

## JavascriptAPI

Using PP's javascript API the operator will be able to handle the DGA data much easier. Depending on the chosen push or pull functionality, the .js file will include functions to subscribe, listen and consume data. The API will include the source code file(.js) and also how to use the functions provided

Latest js file can be found on:

<https://dga.pragmaticplaylive.net/dgaAPI.js>

### Example of the functions contained inside the API

To start consuming the game information from Pragmatic Play's tables you will need to follow a few steps:

#### Step1

`dga.connect('server')`

Server could be set to live or staging URL. Pragmatic Play will provide this.

**1 server connection.**

`dga.available('casinoID')`

Request will return all tables available for selected casino. Pragmatic Play will provide the relevant casinoID once integration of DGA starts.

`dga.subscribe('casinoID', 'tableID', 'currency');`

Multiple subscribe methods. **1 subscribe method for each table you would like to get info from.**

Connect to a table to receive table information. tableIDs will be provided.

Currency is optional. When empty EUR values will be sent. Please consult Pragmatic Play for supported currencies.

`dga.onConnect()`

When `dga.connect('server')` has successfully connected to DGA server, then the `dga.onConnect()` method can be invoked. This can then be used to contain all the subscribe methods.

#### Step 2

`dga.onMessage(data)`

To consume data. Data will be contained as an object for ease of use. Override this method to start using the response information.

Please see Data format & object example on the next page. Every time the table info updates a new object will be send with the updated information to be consumed

#### Step 3

`dga.disconnect()`

disconnecting from service.

\*when player leaves page a socket will normally auto disconnect as well.

## Data Format

Data will be send to the operator using JSON format. As part of the API provided JSON format will be consumed as an object (image on the right) for ease of use.

## 18.2 Flow of placing and sending bets for Seamless Wallet API

Due to the fact that on some Live Casino tables it is possible to place additional bets (bet behind, side bets) we would like to give an example list of such scenarios and what will be sent to the operator's API.

*Scenario 1:* Player placed one main bet on one seat and no bet behind

We will send only one /bet.html and one /result.html (if there was a winning) call

*Scenario 2:* Player placed main bets on several seats and no bet behinds

We will send only one /bet.html and one /result.html (if there was a winning) call

*Scenario 3:* Player placed one main bet and one bet behind

We will send two /bet.html calls (one for main bet and one for bet behind) and one /result.html call (as total and in case there are any winnings)

*Scenario 4:* Player placed main bets on several seats and one bet behind

We will send two /bet.html calls (one is for all main bets and one for bet behind) and one /result.html call (as total and in case there are any winnings)

*Scenario 5:* Player placed main bets on several seats and several bet behinds

We will send multiple /bet.html calls (one for main bet and one bet for each bet behind) and one /result.html call (as total and in case there are any winnings). Therefore, if there's one main bet and seven bet behinds, we will send eight bets.

*Scenario 6:* Player placed one main bet with one side bet

We will send one /bet.html calls and one /result.html call (if there was a winning). The side bet is always a part of a main bet.

## 18.3 Games Full-Screen

Full Screen in live games allows to use total set of functionality in viewport, and ensures the game container stick without any scrolls and scaling, to give users a good interaction

In order to allow fullscreen mode, when Live Casino Game is being used in mobile version, Operator should embed in Object (container) with game client, following JS script:

```
<script src="https://client.pragmaticplaylive.net/desktop/assets/api/fullscreenApi.js" ></script>
```

The following attributes have to be included in the iframe in order to support the fullscreen button in the LC games:

**allowfullscreen webkitallowfullscreen mozallowfullscreen**

## 18.4 Predefined filters in Live Casino Lobby categories

Operator can provide lobbyFilter values when composing game Launch URL. If provided filter values are present in Live Casino Lobby, they will be set as a default when player opens the category.

### For Seamless Wallet API

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/game/url/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=ext_test1&symbol=101&language=en&currency=EUR&platform=WEB&technology=H5&token=
dsgfssdf5g4dfg&styleName=ext_test1&cashierUrl=http://somewebsite.com/cashier/
&lobbyFilter=BJ_FS:FS$BJ_MB:1$BJ_TYPE:S&lobbyUrl=
http://somewebsite.com/lobby/&hash=977c5d467810052271c3983a1d789afa&country=USA
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "gameURL": "https://test1.prerelease-env.biz/gs2c/playGame.do?
key=token%3Ddsgfssdf5g4dfg%60%7C%60symbol%101%60%7C%60technology%3DH5%60%7C%60platform%3DWEB%60%7C%

2F%60%7C%60lobbyUrl%3D%20http%3A%2F%2Fsomewebsite.com%2Flobby%2F&ppkv=2&styleName=ext_test1&country
=USA&lobbyFilter=BJ_FS:FS$BJ_MB:1$BJ_TYPE:S&isGameUrlApiCalled=true"
}
```

### For Balance Transfer API

*Example of HTTP request:*

```
POST /IntegrationService/v3/http/CasinoGameAPI/game/start/ HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/x-www-form-urlencoded
Cache-Control: no-cache

secureLogin=username&externalPlayerId=test_player&gameId=101&language=en&platform=WEB&cashierURL=ht
tp://domain.com/&lobbyFilter=BJ_FS:FS$BJ_MB:1$BJ_TYPE:S&lobbyURL=http://domain.com/
&hash=438fea0a68a0e9ab49df756cc20eda8f
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "gameURL": "https://{game_server_domain}/gs2c/openGame.do?tc=SHq6rK8JEUJRKmeAqD3Ceim1Wojtma1MA7xsu4-
ciynHFWXosjDjgAUPH1A3FSoAM&lobbyFilter=BJ_FS:FS$BJ_MB:1$BJ_TYPE:S&styleName=username&lang=en"
}
```

## 18.4.1 Filter Values

| Filter |                     |                  |                   |
|--------|---------------------|------------------|-------------------|
| BJ     | Category Blackjack: |                  |                   |
|        | FS                  | FS               | Free seats        |
|        | MB                  | Min bets         |                   |
|        |                     | 1                | €1-10             |
|        |                     | 25               | €25-50            |
|        |                     | 100              | €100+             |
|        | TYPE                | Table type       |                   |

## XIX. Free Chips API

Free Chips (FC) allows the player to play a specified number of free chips in a table live game. Free Chips created via Free Chips API may be configured to be played with a certain number of chips, chip value, bet limit and win limit in specified games. During Free Chips gameplay, bets are not deducted from the player's balance, but all wins are collected for the Free Chips in the Pragmatic Play's system.

After all free chips are played, the Pragmatic Play system sends a bonusWin API call to the Operator server to add money to the player's balance. Please note that not all games support FC.

Free Chips can be awarded to players registered in the Pragmatic Play system using API. If a player is not registered in the PP system yet, their account will be created automatically.

Free Chips HTTP service is a simple API for game Operators to manage Free Chips. API is an HTTP listener that listens to POST requests coming to a URL with the request mappings below.

All responses should be in JSON format.

### **Important:**

*For Seamless Wallet integration, in order to receive **countOfFreeChips** value in wallet requests for each round, an operator should accept enhanced format of roundDetails (Please see section 3.3 Data Types), and ask the Pragmatic Play's Technical Support for additional configuration.*

### **Note:**

URL of the FC HTTP service will be provided by Pragmatic Play for the production and test environments and looks like: <https://{API service domain}/IntegrationService/v3/http/FreeChipsAPI/LC/>

### **Note:**

Free Chips HTTP service is securely protected hence please be sure:

- player's browser (end) must NOT be used as an initiator of requests to the service;
- proper IPs are supplied to Pragmatic Play for whitelisting

The **bonusCode** is unique and can be used only one time for the same playerId. Please make sure you've integrated the FC in the proper way and won't reuse/award the same **bonusCode** values in your logic. In case the Casino Operator needs to make the **bonusCode** reusable, they should ask Pragmatic Play's Technical Support for additional configuration.

## 19.1 Hash calculation

Hash code is calculated with following formula:

From request post parameters, all parameters are taken (except hash) and appending to string:

6. Sort all parameter by keys in alphabetical order.
7. Append them (if the value is not null or empty) in key1=value1&key2=value2.
8. Append secret key, e.g.: key1=value1&key2=value2SECRET.
9. Calculate the hash by using MD5.
10. Compare with hash parameter. In the case of failure Casino Operator should send the error code 5.

## 19.2 Data types

| Name  | Type        | Description  |
|---|-------------|--|
| playerId  | String(100) | Id of the player within the Operator system. Examples: 1000, 2644987.  |
| gameId  | String      | Unique identifier of the game.   |
| chipsNumber   | Number      | Number of free chips awarded.  |
| chipsNumberPlayed   | Number      | Number of free chips played.   |
| chipValue   | Number      | Value of a single free chip in EUR.  |
| maxBetLimit   | Number      | Maximum number of free chips that can be placed in a round. Should be a natural number greater than 0.   |
| maxWinLimit   | Number      | Maximum winning limit in EUR that a player can receive in a bonus. Should be a natural number greater than 0.  |
| bonusCode   | String      | Bonus unique identifier within the Operator system. Should be 1-100 character long.<br><i>Max length of this parameter depends on <b>requestId</b>. The sum of their length has to be 252 symbols or less.</i>   |
| requestId   | String      | Unique identifier of FC credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>Max length of this parameter depends on <b>bonusCode</b>. The sum of their length has to be 252 symbols or less.</i>              |
| startDate,<br>expirationDate,<br>validityDate,<br>expirationPeriod,<br>validityPeriod | Long        | Date and time when the bonus will start, expire or until it is valid - timestamp in seconds.<br><br><i>Start date must be a valid future date. Expiration date should be after start date but no more than 45 days.<br/>(Unix epoch time in seconds, for example : 1470926605)</i> |
| error   | Integer     | Error code.  |
| description   | String      | Description of the error for troubleshooting.  |

## 19.3 Create Free Chips

*Request path: POST FreeChipsAPI/LC/create*

Using this method Operator can create a new Free Chips campaign with the Pragmatic Play's games.

**Note:**

To specify Expiration and Validity for FC, either **expirationDate** and **validityDate** (as timestamps in seconds) OR **expirationPeriod** and **validityPeriod** (as {N} minutes) parameters can be specified. If **expirationPeriod** is specified, **validityPeriod** must be specified as well.

Expiration date/period cannot be more than 45 days after start time. The bonus validity period must not be longer than 45 days.

*Request parameters*

| Name             | Description  | Status  |
|------------------|--|---|
| secureLogin      | User name for authentication in the Casino Game API service.   | Required  |
| bonusCode        | Bonus id within the Casino Operator's system. Should be unique within the brand.   | Required  |
| startDate        | Date and time when free chips campaign will start.<br><i>*UNIX time in sec</i>   | Required  |
| expirationDate   | Date and time when the free chips will expire.<br><i>*UNIX time in sec</i>   | Optional<br>Should NOT be used when the <b>expirationPeriod</b> is specified. |
| validityDate     | Date and time when the bonus gets invalid and is unavailable for the player.<br><i>*UNIX time in sec</i>   | Optional<br>Should be used when the <b>expirationDate</b> is specified.       |
| expirationPeriod | Number of minutes (after FC is created for a player), after which free chips will expire.  | Optional<br>Should NOT be used when the <b>expirationDate</b> is specified.   |
| validityPeriod   | Number of minutes (after FC is created for a player), after which the bonuses will become unavailable.   | Optional<br>Should be used when the <b>expirationPeriod</b> is specified.     |
| chipsNumber      | Number of free chips awarded.  | Required  |
| chipValue        | Value of a single free chip in EUR.  | Required  |
| maxBetLimit      | Maximum number of free chips that can be placed in a round. If not provided, the bonus will have no bet limit.   | Optional  |
| maxWinLimit      | Maximum winning limit in EUR that a player can receive in a bonus. If not provided, the bonus will have no win limit.  | Optional  |
| hash             | Hash code of the request.  | Required  |
| gameList         | List of the games associated with the bonus. See below Games type description of the objects in the list.<br><i>This data must be sent as a JSON in the body of the request.</i> | Required  |

*Type: Games*

| Name   | Description   |
|--------|---|
| gameId | Id of the game associated with the free chips campaign. |

### *Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

### *Example of HTTP request:*

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/create?
secureLogin=username&bonusCode=421&startDate=1721808000&expirationDate=1722400000&validityDate=1722

d44e18 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json

{
  "gameList":
  [
    {"gameId": "1611"}
    {"gameId": "bjd"}
  ]
}
```

### *Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 19.4 Cancel Free Chips

*Request path: POST FreeChipsAPI/LC/cancel*

Using this method Operator can cancel an existing Free Chips campaign in the Pragmatic Play system. In addition to campaign cancellation, all related players' bonuses will also be cancelled according to the corresponding logic.

**Note:**

Cancellation logic for bonuses depends on the bonus status.

If a player has not claimed the given bonus, all free chips will be removed.

If a player claimed the bonus and played partially, the not-played free chips will be removed.

If a player has claimed and played the bonus, no action will be taken.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service.                     | Required |
| bonusCode   | Bonus id within the Casino Operator's system. Should be unique within the brand. | Required |
| hash        | Hash code of the request.  | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/cancel?
secureLogin=username&bonusCode=421&hash=39554fed4f41132eb8fe75e9a7ba3df6 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 19.5 Get Players FC

*Request path: POST FreeChipsAPI/LC/getPlayersFC*

Using this method Casino Operator system can get from the Pragmatic Play system all Free Chips that are awarded to the particular player but hasn't played yet.

*Request parameters*

| Name        | Description  | Status   |
|-------------|--|----------|
| secureLogin | User name for authentication in the Casino Game API service. | Required |
| playerId    | Id of the player within the Operator system.                 | Required |
| hash        | Hash code of the request.                                    | Required |

*Response parameters*

| Name        | Description   |
|-------------|---|
| error       | Error code.   |
| description | Description of the error for troubleshooting.   |
| bonuses     | List of information about all not finished FC that were awarded to the player. See below FC type description of the objects in the list |

*Type: FC*

| Name              | Description   |
|-------------------|---|
| gameIDList        | List of symbolic unique identifiers of the game that the free chips are awarded for, comma separated.<br><i>Example: 1611, bja.</i> |
| chipsNumber       | Number of free chips awarded.   |
| chipsNumberPlayed | Number of free chips already played.  |
| chipValue         | Value of a single free chip in EUR.   |
| bonusCode         | Bonus id within the Operator system. Should be unique within the brand.   |
| expirationDate    | Date and time when the free chips will expire.  |

*Example of HTTP request:*

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/getPlayersFC?
secureLogin=username&playerId=12345&hash=b623382e6dd3219d63b7ed1979408856 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "bonuses": [
    {
      "gameIDList": "1611",
      "chipsNumber": 27,
```

```
"chipsNumberPlayed": 20,  
"chipValue": 1,  
"bonusCode": "421_fbb1",  
"expirationDate": "2024-07-30 00:00"  
},  
{  
  "gameIDList": "bja",  
  "chipsNumber ": 11,  
  "chipsNumber Played": 0,  
  "chipValue": 5,  
  "bonusCode": "421_fbb2",  
  "expirationDate": "2024-08-11 00:00"  
}  
]  
}
```

## 19.6 Add players

*Request path: POST FreeChipsAPI/LC/addPlayers*

Using this method Operator can add players to the existing Free Chips campaign. The bonus will be available to both existing and future players, whether they are already registered with the PP system or not yet.

*Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service.  | Required |
| bonusCode   | Bonus id within the Operator system. Should be unique within the brand.   | Required |
| playerList  | List of player id to add to the existing Free Chips campaign, comma separated.  | Required |
| requestId   | Unique identifier of FC credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| hash        | Hash code of the request.   | Required |

*Response parameters*

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

*Example of HTTP request:*

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/addPlayers?
secureLogin=username&bonusCode=421&hash=464e9816b531cc78bbdcffc81dd44e18 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json

{
  "playerList": ["449986","450013","450509","437070"]
}
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK"
}
```

## 19.7 Add player

**Request path:** *POST FreeChipsAPI/LC/addPlayer*

Using this method Operator can add one player to the existing Free Chips campaign and override such parameters as expirationDate, validityDate, chipsNumber, maxBetLimit or maxWinLimit. The bonus will be available to both existing and future players, whether they are already registered with the PP system or not yet.

**Request parameters**

| Name                  | Description   | Status   |
|-----------------------|---|----------|
| secureLogin           | User name for authentication in the Casino Game API service.  | Required |
| bonusCode             | Bonus id within the Operator system. Should be unique within the brand.   | Required |
| playerId              | Id of the player within the Operator system.  | Required |
| config.expirationDate | Date and time when the bonus will expire (in seconds). Provided expiration date should not exceed the expiration date of campaign.  | Optional |
| config.validityDate   | Date and time until the bonus will be valid (in seconds). Provided validity date should not exceed the validity date of campaign.   | Optional |
| config.chipsNumber    | Number of free chips awarded.   | Optional |
| config.maxBetLimit    | Maximum number of chips that can be placed in a round. If not provided, the bonus will have no bet limit.   | Optional |
| config.maxWinLimit    | Maximum winning limit in EUR that a player can receive in a bonus. If not provided, the bonus will have no win limit.   | Optional |
| requestId             | Unique identifier of FC credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| hash                  | Hash code of the request.   | Required |

**Response parameters**

| Name        | Description                                   |
|-------------|---|
| error       | Error code.                                   |
| description | Description of the error for troubleshooting. |

**Example of HTTP request:**

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/addPlayer?
secureLogin=username&bonusCode=421&playerId=12345&hash=26a4f62a8cde581ed5645cbd115f28b0 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

```
{
  "config": {
    "expirationDate": 1722240000,
    "validityDate": 1722412800,
    "chipsNumber": 1234
    "maxBetLimit": 5,
    "maxWinLimit": 5000
  }
}
```

*Example of JSON response:*

```
{  
  "error": "0",  
  "description": "OK"  
}
```

## 19.8 Remove players

*Request path: POST FreeChipsAPI/LC/removePlayers*

Using this method Operator can remove players from the existing Free Chips campaign and cancel free chips awarded to them.

**Note:**

Cancellation logic for bonuses depends on the bonus status.

If a player has not claimed the given bonus, all free chips will be removed.

If a player claimed the bonus and played partially, the not-played free chips will be removed.

If a player has claimed and played the bonus, no action will be taken.

### Request parameters

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service.  | Required |
| bonusCode   | Bonus id within the Operator system. Should be unique within the brand.   | Required |
| playerList  | List of player id to remove from the existing Free Chips campaign, comma separated.   | Required |
| requestId   | Unique identifier of FC credit request (for specific player). It has to be passed to re-use the same bonusCode value again for the player.<br><i>The field is optional and is not sent to the Casino Operator by default. In case Casino Operator needs this parameter to be sent with request they should ask the Pragmatic Play's Technical Support for additional configuration.</i> | Optional |
| hash        | Hash code of the request.   | Required |

### Response parameters

| Name  | Description |
|-------|-------------|
| error | Error code. |

description      Description of the error for troubleshooting.

### Example of HTTP request:

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/removePlayers?
secureLogin=username&bonusCode=421&hash=464e9816b531cc78bbdcffc81dd44e18 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json

{
  "playerList": ["449986","450013","450509","437070"]
}
```

### Example of JSON response:

```
{
  "error": "0",
  "description": "OK"
}
```

## 19.9 Get Chip Values

*Request path: POST FreeChipsAPI/LC/getChipValues*

Using this method Operator can receive chip values in EUR currency that are available for FC with provided LC games.

**Note:**

This API method is designed only for FC and returned chip values are not related to chip values of real bets.

*Request parameters*

| Name        | Description   | Status   |
|-------------|---|----------|
| secureLogin | User name for authentication in the Casino Game API service.                            | Required |
| gameList    | List of live casino game IDs. If not provided, FC chips for all games will be returned. | Optional |
| hash        | Hash code of the request.   | Required |

*Response parameters (JSON)*

| Name        | Description  |
|-------------|--|
| error       | Error code.  |
| description | Description of the error for troubleshooting.                |
| chipValues  | List of possible chip values in EUR for the requested games. |

*Example of HTTP request:*

```
POST IntegrationService/v3/http/FreeChipsAPI/LC/getChipValues?
secureLogin=username&hash=405281156fc4cace4d2385a8ead83290 HTTP/1.1
Host: api.prerelease-env.biz
Content-Type: application/json
```

```
{
  "gameList": ["1611", "bca"]
}
```

*Example of JSON response:*

```
{
  "error": "0",
  "description": "OK",
  "chipValues": [
    0.1,
    0.5,
    1.0,
    5.0,
    10.0,
    50.0,
    100.0,
    200.0,
    500.0
  ]
}
```

## 19.10 Error codes

The tables below contain the error codes that the Pragmatic Play system will return in response to Free Chips API calls.

### *Authentication errors:*

| Code | Description  |
|------|--|
| 0    | OK   |
| 1    | Authentication failed. Incorrect secure login and secure password combination.   |
| 2    | Validation failed. Empty mandatory field '{field name}'.   |
| 16   | Wrong json data: '{json data}'.  |
| 37   | Bad request: '{bad parameters list}'.  |
| 1000 | Internal server error. Pragmatic Play will return this error code if their system has internal problem and cannot process the request. |

### *Errors while executing the request:*

| Code | Description  |
|------|--|
| 4003 | Campaign does not exist  |
| 4005 | Campaign cannot be cancelled due to the status   |
| 4011 | Bonus Code cannot be empty   |
| 4012 | Bonus Code must be 1-100 characters long   |
| 4013 | Bonus Code cannot contain the / symbol   |
| 4014 | Campaign with this bonus code already exists   |
| 4032 | Max winning limit should be greater than 0   |
| 4033 | Max bet limit should be a natural number greater than 0  |
| 4034 | The following tables have minimum bet limit larger than the given maximum bet limit  |
| 4042 | Number of chips cannot be empty  |
| 4043 | Number of chips value should be a natural number   |
| 4044 | Chip value must be greater than 0  |
| 4045 | Chip value cannot be lower than the lowest min bet limit of the selected tables  |
| 4046 | Chip value cannot be higher than the highest max bet limit of the selected tables  |
| 4047 | Chip value is not in the given set   |
| 4056 | GameID not present for the casinoid  |
| 4091 | Free chip bonus does not exist   |
| 4094 | Bonus is already either expired, cancelled or wagered  |
| 4100 | The Player/s already exists with same request ID   |
| 4101 | The player/s already has a bonus for this campaign using the provided bonus code. To issue additional bonuses, please include a Request ID |

|      |  |
|------|--|
| 4156 | Game list cannot be empty  |
| 4157 | GameID contains invalid characters   |
| 4160 | Game type is not allowed for free chips  |
| 4201 | Start date must be a valid future date   |
| 4202 | Either dates (expirationDate and validityDate) or periods (expirationPeriod and validityPeriod) should be specified      |
| 4203 | The expiration date cannot be the same as the start date and must be within a maximum of 45 days after the start date    |
| 4204 | The expiration period cannot be zero and must be a maximum of 45 days after the start date                               |
| 4205 | The validity date must be the same as the expiration date or within a maximum of 45 days after the expiration date       |
| 4206 | The validity period must be the same as the expiration period or within a maximum of 45 days after the expiration period |
| 5000 | Oops! We encountered an unexpected issue. Please try again later   |
| 5002 | Invalid Request  |
| 7000 | Players list cannot be empty   |
| 7001 | External Player Id cannot be empty   |
| 7003 | Invalid start date, it should be Epoch seconds   |
